"The Rosary and other Poems," by Robert Cameron Rogers (New York: The John Lane Co.), gives evidence of the intelligent study of a considerable variety of poetic styles and modes. Mr. Rogers's own range is wide enough to include a group of spirited Western poems, "The Prospector," "The Maverick," etc., and such a pleasantly ingenious sonnet as this:

Since none may kiss her eyes save Sleep and I,
Sleep holds himself my rival, and to-night,

Jealous of that he deems his sovereign right,
He will not look on me as he glides by.
What matter then! his malice I defy—
I'll dream awake until the waking light,
Dreams winged with longing sent in Sleep's des-
-spite,
To haunt her chamber till the dark hours fly.

Sleep, should thy languid kiss her eyelids seal,
Then she will dream and dream alone of me;
But if to kiss them haply shouldst decline,
Her waking thoughts across the night will steal
To meet with mine. Ah, Sleep, unknown to thee,
I shall prevail whichever path is thine.

Yet with all its variety and intelligence the volume just misses distinction, chiefly, we should guess, because of a certain limitation of sentiment and because the life in it has been strained through too many books.

"Trumpet and Flag," by Edward Sydney Tylee (New York: G. P. Putnam's Sons), is in the phrase of its sub-title a "collection of poems of war and peace." The poems of war are better than those of peace—as must always be the case while passion continues to be a motive in the affairs of men, and the mother of poetry—but even at their best, despite a gift of swinging metre and vigorous phrase, Mr. Tylee's more ambitious pieces have a certain careful timeliness, a skilful obviousness that gives them rather the attraction of an eloquent leading article than of poetry. We like him better in such a fresh and zestful piece as "The Diver":

Swift arrowy flight through sun-soft air;
Bright kiss of waters crystal cool;
The middle darkness of the pool
Of shadowy monsters half aware;
Till deafened by the eddying swirl
I waver back to life again,
And yon June heaven's turquoise stain
Far-flecked with plumes of flying pearl.

Ah, joy! to feel the silken wave
Slip softly over breast and side!
And send great billows circling wide,
To flood the vole's grass-hidden cave;
And stir the water-lily's raft
At anchor in yon little bay,
Where points of glittering sapphire play,
And almost wreck that fairy craft.

O beauty of the Day that dies!
O scented airs from mead and wood!
O pleasure of the dancing blood!
As from the river I arise,
And by its pure embraces seem
Of passion and of care bereft:
A spirit just set free that left
The heavy body in the stream.

In the *caveat emptor* prefixed to his "Pedlar's Pack" (New York: E. D. North) Daniel Henry Holmes modestly affirms that he does not propose to "Homerize or Virgilate," but merely to help "a tired man to kill a Sunday." Yet, though his original and vivacious verse should prove adequate to this end, there is much in the book of serious intent and admirable execution. There is something in the color and composition of Mr. Holmes's verse that suggests the artist's eye, and when in the prelude to a section of "Decorative Panels for Painters Only" we come upon the following, we feel that we have found the secret of his quality:

A LONG WAY AFTER W. E. H.

Sons of the North-light,
Up with your brushes!
Children of Pigment,
Thumb through your pallet!
Look on the flamboyant World about ye,
Hark to the resonant Soul within ye.
Sons of the Rainbow,
Limbs of the Spectrum,
Paint!

It is, indeed, the temperament of the painter blessed with humor, the temperament of the "limb of the spectrum," that gives effectiveness to Mr. Holmes's work. It is evident in phrase, in image, in the waltz measures which he habitually prefers, and in the somewhat Viennese sentiment; but it is assisted by not a little of the faculty of the poet who knows to portray without delineating, as in "A Charmer":

She has no beauty; my memory trips
O'er a hundred prettier women;
But an ugliness, which puckers the lips,
The smart of a ripe persimmon.

She has no brains, and is learned alone
In her golfing and dancing classes;
But in her eyes you may see your own
Conceit, as in looking-glasses.

She has no heart; just a neat little pump,
A marvel of regular action;
Yet I'd give my life to hear it thump
But once out of time by a fraction.

Miss Carolyn Wells's "Whimsey Anthology" (Scribner's) is perhaps the most satisfactory and entertaining of her collections. It contains "logical," "shaped," "alphabetical," "typographical," "alliterative," "catalogue," "mosaic," "punning," and "technical" whimsies; "lipograms," "acrostics," "enigmas," "anagrams," "travesties," "imitative harmonies," "palindromes," "mnemonics," "tongue twisters," "monorhymes," "interior rhymes," "blank verse, in prose," "chain verse," "Jesuitical verse," "echo verse," "macaronic poetry," and limericks. A captious critic, if any such there be, might object that the scheme is too inclusive, and that one or two of the types belong rather in Miss Wells's anthologies of satire and parody. Yet the reader of the book is not likely to complain at having between two covers so abundant a repertory of the most ingenious products of the pen.

In "At the Sign of the Sphinx," second series (New York: Duffield & Co.), the ingenuity of Miss Wells's own pen, or her typewriter, is conspicuous. Her riddles have not, perhaps, sufficient fancy to occupy the æsthetic critic, yet often, as in the following, they have an unlabored humor that is engaging:

Henry the Eighth grew tired of life
With Catherine, his lawful wife:
But for divorce he's no decree;
Enraged, the King cried, "One, two, three!"

But soon my first gave up her soul,
Her body was no more my whole.

The answer is "animate."

In his "Chinatown Ballads" (Duffield & Co.) Wallace Irwin, best known as the author of purely humorous and funny verse, gives evidence of a wider range. Humor is still the predominant quality, but there are touches of grim tragedy, that, coupled with Mr. Irwin's metrical fluency, telling phrase, and dramatizing gift, make the book one that cannot only be read, but re-read.

CURRENT FICTION.

White Fang. By Jack London. New York: The Macmillan Co.

This is the kind of thing Jack London does best. In this atmosphere he wears neither his street swagger nor his more distressing company manners. As a biographer of wild animals he has hardly an

equal. A generation ago this remark would have meant little, but what with Mr. Kipling, Mr. Roberts, Mr. Thompson-Seton, the Rev. Mr. Long, and the rest, this field of natural letters, as it might be called, has become conspicuous. It is the "pathetic" consideration which gives such books their hold upon us; we like to speculate as to the relations or analogies between beast-kind and mankind. Perhaps we do not believe that a stag is capable of soulful love, or a moose of consecutive thought, or a cuckoo of deliberately teaching its offspring to suck eggs; at least we take our disbelief seriously.

Mr. London has not, so far as we know, entered into any controversy, but he has written several books which present feral nature as something distinctly apart from human nature. "White Fang" complements "The Call of the Wild" in showing how readily wild animals may submit themselves to human rule, and how naturally domestic animals may revert to freedom. These dogs and wolves do not talk or think humanly. Instinct impels them and the discipline of experience teaches them what to avoid and what to seek. "Had the cub thought in man-fashion, he might have epitomized life as a voracious appetite. But the cub did not think in man-fashion. He did not look at things with wide vision. He was single-purposed and had but one thought or desire at a time." Three-parts wolf, the cub grows up to become in the end the willing slave of a man who has bestowed upon it such love as a human being may allow an inferior. Being a brute, its experience is brutal, a continuous performance of dog-fights, with no sparing of bloody detail. But, indeed, squeamishness would be out of place here, for if the writer dwells on the savagery of the creature's experience, it is that he may emphasize its fitness. He believes that wild beasts get quite as much pleasure as pain out of the life which they are intended to live. It is under the white man's brutality that White Fang is nearly driven to madness.

Doublings. By Eden Phillpotts and Arnold Bennett. New York: S. S. McClure & Co.

Nothing in Mr. Phillpotts's "The Secret Women," "Children of the Mist," or "The Portreeve," or Mr. Bennett's "Anna of the Five Towns" would suggest that the joint product of these two authors would be a light-hearted, mile-a-minute detective story. The opening is gloomy enough, as if, in coming to London, Mr. Phillpotts had brought along all his customary depression. Philip Masters is hungry, with only sixpence in his pocket, but for some occult reason, when it is revealed that he has lately been discharged from a jiu-jitsu academy for breaking a duke's arm, your spirits insensibly rise. By every unwritten law of the game of fiction, that incident would be out of place in a serious story, and at his grimmest Mr. Phillpotts never fails to play by the rules. In fact, through this whole brilliant *tour de force*, both he and Mr. Bennett continue to play, showing amazing animal spirits, fertility of incident, and, above all, a rapid pace.

The story differs from the average detective mystery only in being quicker, more amusing, and in covering a wider geograph-

ical field, as it ranges from a London model lodging-house to a stagnant West Indian lake. Also the briefly sketched characters are less inanimate than is usual in novels of this class. It is adventure pure and simple from the moment Philip consents to relieve the night watchman. The number of events which follow would furnish several volumes of De Boisgobey. In a tale bringing in Scotland Yard, plain-clothes men, and uniformed police, music-hall queens, motor cars, chartered yachts, treasure hunting in the Spanish Main, Russian secret service people, London clubs, and Obeah fearing negroes, it is hardly within human possibility that the end should fully equal the brilliant beginning.

A Knight of the Cumberland. By John Fox, jr. New York: Charles Scribner's Sons.

This is the very model of a story. It takes the reader into the mountains of the Tennessee border; it tells enough of a story to connect easily the scattered incidents; it happily allots eccentric characters and unusual actions to each other; every word tells; and the little book has a length in absolute proportion to its strength.

Of the characters, the Hon. Samuel Budd closely rivets the attention, he of the Congressional aspirations and the taste for mediæval tournament; he who speaks in a rotation of tongues, passing lightly from the language of the natural Southern man to the tropes of the lawyer, the flights of the politician, the magnificences of Sir Walter Scott. Nor is the reader ever allowed to stray far from the spell of the Blight, the merry maiden so named because nor man nor woman nor sixteen-hand-high mule could resist her. The whole story makes glad the sense of symmetry, compact as it is of fun, manners, and motives, as they flourish in the land that we almost think of as created by Mr. Fox.

When Love Speaks. By Will Payne. New York: The Macmillan Co.

Although Mr. Payne deals competently with business and political corruption in a small town of the Middle West, whose most respected and respectable citizens do not stop at bribery, blackmail, or arson to further their financial interests, "When Love Speaks" is neither a business nor a political novel. The struggles of men and women as human beings must forever be the basis of all good fiction. The contemporary picture has its value; but without the solid foundation of personal interest, the cleverest snapshot of corruption leaves you rather edified than enthusiastic. In the present story, Mr. Payne deliberately uses the Distillers' Trust and the venal judiciary of "Saugenac" as they affect the intimate inward relation of David and Louise Donovan, instead of employing his two young people as a convenient set of rails along which to run a history of commerce in Saugenac. Consequently, his book is alive.

From the opening chapter he squarely grasps the fundamental issue, a question which perennially crops up wherever men and women form any kind of social body: how far complete loyalty to abstract right

is compatible with warm-blooded loyalty to friends; whether it is better to be just or to be merciful. In this case, set forth with considerable imagination, but no disregard for probability, the choice besets Donovan at every turn, with increasing force and pitiless logic. The strain is made all the more acute by the fact that his relation to his wife continually depends upon his deciding between the cause of her brother, an unfaltering believer in surgically clean politics, and a body of friends to whom he is bound by every tie of interest and affection. The story takes in the whole life of a raw, striving town, from its absentee fashionable lady, who turns up with New York standards to patronize a local horse show, to the handsome hotel "dining-room girl." A large number of characters are briefly and unaffectedly described, somewhat after the quiet manner of Brand Whitlock, but with greater force and penetration. The climax is skilfully held back, and the final solution of the problem of one particular pair is managed without flatness, or undue straining of probability. The whole tone of the book is wise, tolerant, and unimpeachably sincere.

Mr. Payne is not once guilty of florid writing. It is, however, none too early (and, let us trust, not yet too late) to protest against a form of brevity which robs an occasional verb of its lawful object, and forces a noun to do an adverb's work, by tacking on an adverbial termination. The average of expression is too dignified to be marred by such slips as "Louise roused"; "she spoke sisterly." On the whole, these blemishes are few and trifling, only noticeable because they are growing so rife in Western fiction as to create a menace.

Caybigan. By James Hopper. New York: McClure, Phillips & Co.

In this volume of tales Mr. Hopper has done something roughly comparable to what was done by Kipling in "Soldiers Three" and by Gilbert Parker in "Donovan Pasha." This time it is Anglo-Saxon imperialism in the Philippines instead of in India or Egypt. The natives are poor devils, God bless them, somewhat in the order of monkeys, whose business it is to be grateful to the blond, tubbing, and muscular usurper whom Providence has mysteriously accounted with a big heart and a big stick. The Yankee Jack-of-all-trades idea is super-added here, for the leading person is an American teacher who knows more of fighting than an army officer, more of administration than a mayor, and more of human nature than a psychologist. Caybigan, the hero of one of the fifteen stories which make up the book, is the only native to whom extraordinary virtue is allowed. These tales have proved "magazinable" for sufficiently obvious reasons. They are of the right length (or brevity); and each of them, apart from the sentiment of race, appeals to some consideration of what might be called "justly popular sentiment": such as the love of young beauty, the love of childish innocence, the love of the under dog—most luxurious of all, because most patronizing. The present reviewer has found that these tales, which Mr. Hopper has frankly offered for hasty perusal, endure very well a second reading.

NEWS FOR BIBLIOPHILES.

Book-Prices Current, from October, 1905, to July, 1906. By J. H. Slater. London: Elliot Stock.

This is the twentieth annual volume of the English "Book-Prices Current." The chronological arrangement of sales, which, at least in this country, is generally criticised, has one point of advantage. Printing can begin early in the season, and when the last sales come in July, the larger part of the book can be ready. In the American "Book-Prices Current," where the arrangement is alphabetical, no printing can begin until the close of the last sale. Mr. Slater's volume for 1906 includes 6,989 lots, occupying 646 pages, exclusive of the Index. The American volume for 1906, to be issued in December, records upwards of 14,000 lots, occupying something like 800 pages. In the American book \$3 is taken as a limit, and while not every lot bringing this sum is included, the record is practically complete. In the English volume £1 is nominally the limit, though a few cheaper items are included. The record, however, is avowedly not complete, but is presumably representative.

Mr. Slater's Introduction is mainly taken up with lists of items which brought £100 and upwards. First come Shaksperiana, seventeen lots, the highest, "Much Ado About Nothing," 1600, which brought £1,570; and the lowest "Titus Andronicus," 1611, lacking title, which brought £106. Fifteen of the other books which brought £100 or more were parts of that wonderful volume found in Ireland, which contained seventeen early English interludes. It was broken up and the pieces sold separately at Sotheby's, June 30. Recorded in the volume also are two items from the library of Franz Trau, sold in Vienna October, 1905: Cicero's "Officia et Paradoxa," printed by John Fust at Mainz in 1465, on vellum, brought £1,875; and a block book, the Apocalypse of St John, printed probably between 1445 and 1460, brought £1,125.

Fewer items than usual are favored with Mr. Slater's bibliographical notes. To the record of the sale of a copy of Smith's "Generall Historie of Virginia," 1624, for £127, he adds that Sir Edward Bunbury's copy brought £204 in 1896. This sale is often cited as the record, but the sole explanation of the high price is that the Bunbury copy contained a printed title, date 1625, not found in any other copy. This note is added to the record of sale of the first issue of Fielding's "Tom Jones," six volumes, 1749:

The first issue contains a number of misprints, etc., which are referred to in a leaf of "errata" inserted in the first volume. In the second issue these errors were corrected and the leaf withdrawn.

The "errata" are not on a separate leaf, but occupy page lxiv. at the end of the contents. This page is blank in the second issue. The number of leaves is identical in both.

The £95 paid for the first edition of Gray's "Elegy," 1751, on June 6 at Puttick's, is said to be the "record price to date." This is in line with the custom of English writers to ignore American auction sales. The same error was made in the November issue of the *Bookman*, where

it is said that a copy of the first edition of the "Elegy" was "sold recently in London for the record price of \$500." We do not quibble over the difference between £95 and \$500, but the record price, \$740, was paid for the McKee copy, at Anderson's, in this city, May, 1902.

On Monday, Tuesday, and Wednesday next C. F. Libbie & Co. of Boston sell the library of the late F. Griswold Tefft. The collection includes two sets of Audubon's "Birds of America," one, the first octavo edition, 1840-1844, the other the second octavo edition, 1856; several of the rarer first editions of American authors; and a few pieces of rare Americana. Among the latter are four of the Darien tracts issued for or against the Scottish colony, in 1699 and 1700. Among the first editions are books by Longfellow, Lowell, Whittier, and Holmes. The Lowell series is the most nearly complete, and contains the "Class Poem," 1838, and "A Year's Life," 1841. Among the Longfellow items is the rare first edition of "Outre-Mer," the two parts published in Boston in 1833 and 1834, here bound in one volume. The complete book was first published in New York in 1835. "The Spanish Student," 1843, in the original boards, uncut, is another choice item. Whittier's "Mog Megone," 1836, is in the original blue cloth, described as "an immaculate copy, the binding as fresh and clean as the day of the issue." It is some time since a copy in the original binding has appeared in the auction room.

Part III. of the library of Wilberforce Eames of the New York Public Library will be sold by the Anderson Auction Company of this city, on Monday and Tuesday, November 26 and 27. This portion of the library is devoted to the history, literatures, and languages of Europe. The Monday sessions are given up to the books on Greece and Rome. Among the books offered during the Tuesday sessions, seventy-four different European languages and dialects are represented. Among the items are the first English translation of Appian, 1578; the *editio princeps* of Diogenes Laertius, 1533; two books, printed privately by Julian Hibbert in Greek types, which he had cut to resemble written Greek; and a collection of books on the Gypsies.

On November 26 and 27 the Merwin-Clayton Sales Company of this city sells a collection, including a series from the Kelmscott Press; Shelley's "Queen Mab," 1813, the title lacking, and imprint scissored from last leaf as in many copies; and first editions of Dickens, Thackeray, Tennyson, Swinburne, Emerson, Freneau, Lowell, and other American authors.

The library of Lawrence W. Hodson, to be sold by Sotheby, Wilkinson & Hodge in London, on December 3, 4, and 5, is notable as containing a series of twenty-five of the issues of the Kelmscott Press printed on vellum. The number of copies so printed was small, often only five or six, and seldom more than ten. There are also more than twenty manuscripts of Morris's published works, all in the author's autograph. Among these are "The Earthly Paradise," "The Story of the Glittering Plain," "The Life and Death of Jason," "Poems by the Way," and "The

Well at the World's End," as well as his translations of the "Æneid" and the "Odyssey." There are three early fifteenth-century manuscripts of Chaucer's "Canterbury Tales"; two large fragments (one sixty-five leaves, the other thirty-three leaves) of the first edition of the "Canterbury Tales" printed by Caxton about 1475, and the editions of Chaucer's works of 1542, 1561, and 1721.

The library of the late Richard Garnett, to be sold at Sotheby's on December 6, includes three of Shelley's note-books, containing early drafts of many of his published poems, and showing variations from the printed versions, as well as some unpublished scraps of verse and prose, and several drawings. These note-books were presented to the late Dr. Garnett by Sir Percy and Lady Shelley. All the other note-books are in the Bodleian Library.

Sotheby, Wilkinson & Hodge sold on November 5 and 6 a collection from the library of C. J. Spence. Among the prices are the following: "Biblia Latina Vulgata," manuscript on vellum, fourteenth century, £40; Evangelistarium, illuminated manuscript on vellum, fifteenth century, £141; "Horae ad Usus Sarum," illuminated manuscript on vellum, fifteenth century, £140; "Horae" on vellum, late fifteenth-century French decorations, £500; another, also French fifteenth-century, with seven fine *grisaille* miniatures, £645; Chapman's "Seaven Bookes of the Iliades of Homere, Prince of Poets," 1598, £214. This is the first edition of Chapman's version, and when the work was revised for the folio edition of 1610, books i. and ii. were rewritten. In this copy a few leaves were slightly defective, and some were stained. In 1904 a copy brought £291 at Sotheby's, and another £230 at Hodgson's. At the McKee sale in this city, 1901, a copy brought \$860.

The collection of books, autograph letters, manuscripts, documents, and book-plates belonging to the late George M. Elwood of Rochester was offered at auction last week by the Merwin-Clayton Sales Company of this city. The Private Journal of Aaron Burr, reprinted in full from the original manuscript in the library of William K. Bixby of St. Louis, with introduction, 2 volumes, original boards, uncut, Rochester, 1903, brought \$154. Letters from George Washington to Tobias Lear, with appendix containing miscellaneous Washington letters and documents, reprinted from the originals in the collection of Mr. Bixby, 4to, boards, Rochester, 1905, brought \$51. A first edition of "The Book of Mormon," Palmyra, 1830, sold for \$20. The pages were slightly foxed, and a name was written on the title. An autograph letter of John Brown, the anti-slavery leader, dated Osawatomie, December 5, 1855, brought \$31; a vellum document of appointment, signed by Napoleon, \$25.

The copy of "Modern Chivalry," a curious early American political novel, by that lawyer, politician, chaplain, poet, Hugh Henry Brackenridge, issued in four volumes from 1792 to 1797, which was sold at Anderson's for \$250, on October 25, as "apparently the only complete copy known of the first edition of each volume," did not long retain its uniqueness. Another copy, the four volumes bound in one, has been discovered in a Pennsylvania library, and has come to

New York. But, though two copies are now known, it is not likely that many more will soon come to light. The third volume is one of the crudest specimens of printing extant. It came from the first Pittsburgh press, established by John Scull in 1786, according to Thomas, under the patronage of Brackenridge, the author of this book.

An interesting exhibition of book-bindings, comprising more than a hundred volumes from the libraries of kings and queens of France and of famous personages of the French court, is on view at Charles Scribner's Sons, in this city, until November 24. The collection contains volumes from the libraries of all the rulers of France from Francis I. to Napoleon III.; all the volumes bear the arms or devices of their former owners emblazoned in gold on the covers; and many of the covers are the work of famous French binders, such as Piqué, Derôme, and Padeloup. One of the most curious volumes is the "Davidis Psalmi," which belonged to Louise de Lorraine, Queen of Henry III. This beautiful example of the work of Nicholas Eve is full of the conceits of devout Catholicism. The binding is in brown morocco, with the sides and back covered with the emblems of Christ's passion, tooled in gold. A fine example of the work of Claude Piqué is the "L'Histoire Ecclesiastique," from the library of Charles IX. Clovis Eve is excellently represented by the "Tresor de Tous les Livres d'Amadis de Gaule," which belonged to Marguerite de Valois. Antoine Ruette is represented by the splendid "Ioannis Zonarae Monachi," which belonged to Louis XIII. The "Annales Ecclesiastiques et Civiles," which belonged to the Duc de Penthièvre, is a superb binding by Derôme. Other notable volumes are Marie Antoinette's book of devotions, "Office de la Semaine Sainte," Madame de Maintenon's "Histoires de Philippe de Valois," and the Marquise de Pompadour's "État de Troupes," with a special title-page drawn by Ch. Eisen.

English Literature from the Norman Conquest to Chaucer. By William Henry Schofield. New York: The Macmillan Co. \$1.50 net.

It is characteristic of the indifference with which until recently our early literature has been regarded by the descendants of the men who created it, that since the appearance of Warton's "History of English Poetry" in the eighteenth century no treatise, at once fairly comprehensive and authoritative, on the productions of the period between the Norman conquest and Chaucer, has come from the pen of a scholar of English race. We have been content with turning to translations of Ten Brink and Jusserand. It is well that the task of removing this reproach should have fallen into the hands of a scholar of unquestioned competence. It may be said at once that Professor Schofield's work does not fall below expectation; and as it embodies the results of investigations which have been fruitful in extending and defining our knowledge of the literature of the Middle Ages, it may undoubtedly be accepted as the best general authority for the period which it covers.

The book differs in plan from the other volumes in the series, and indeed from most

histories of English literature, in that the author does not deal with the whole production of each successive period. Instead, he treats his material according to the different *genres*, tracing separately the evolution of each. This method, which Professor Schofield has adopted, it would seem, from the now classical "Littérature française au Moyen Age," by the late Gaston Paris, has both its drawbacks and its advantages. Chief among the drawbacks is the difficulty—for the average reader—of getting a clear idea of the intellectual development of England from the eleventh to the fourteenth century, and the chronological table at the end of the book can hardly be said to remedy this defect. But for professional students the plan of adhering to the evolution of types will have the advantage of presenting material from a novel point of view, to which nobody will deny a fundamental importance.

Another feature of the present work which may provoke debate is the inclusion of chapters on Anglo-Latin and Anglo-French literature, on approximately the same scale as those which deal with writings in the vernacular. Now Latin and French were the natural vehicles of expression for the most intellectual classes in England for two centuries or more after the Norman Conquest; as Professor Schofield says: "The awkward rusticity of much Middle English writing is obviously due to the fact that it was the product of men inferior intellectually, of lower station, and less cultivated than those who were conspicuous in their age, and not to the fact that English itself was a rough instrument of Englishmen prevalently dull." At the same time, the influence of productions in Latin and French by men who lived on English soil, though in many instances no more Englishmen than Spenser was an Irishman, has only an indirect connection with the development of a distinctively English literature. It is therefore questionable whether the author of a book with the above title had not better direct his energies toward giving life to some of the intractable material in which the vernacular abounds, merely devoting, in the manner of his predecessors, so much space to the works in the two rival languages as is necessary for proper perspective. To be sure, the chapters under discussion are not without value; they offer a connected account of their subjects such as is hardly accessible elsewhere; but the man who has mastered Arthurian romance is not likely to go deeply into Duns Scotus; and, on the whole, these second and third chapters contain too many pages of meagre interest.

In the main division of the work—that which deals with English literature proper—the chapter on the romances takes the leading place. On this matter the writer speaks with authority and his discussion of the subject, though it flags toward the end, is the best we have. Here, as throughout the book, Professor Schofield prefaces his treatment of English productions in the particular *genre* with a survey of the antecedent growth of that *genre*, especially in French, on which, as the author rightly insists, the literature of England during this period was mainly dependent. Indeed, the sections on French romances of the various cycles, usually turn out to be the most interesting, as is perhaps inherent

in the case; and this division of the book is rather a compendious treatment of mediæval romance in general than of the merely English contributions. As was to be expected, the author's discussion of the Arthurian legend is of particular interest—only in the pages on French prose Arthurian romances we notice some errors which seem to betray insufficient acquaintance with that *selva obscura*. For instance, the term "Livre d'Artus" is not applied, as Professor Schofield states, to the great "Lancelot du Lac" romance, but to that branch of the Grail-Lancelot cycle which was written to connect the prose rendering of Robert de Boron's "Merlin" with the "Lancelot." Again the "Queste del St. Graal" is not a "part of the enormous 'Grand St. Graal' which tells the whole story." It is a separate romance. On the other hand, the "Grand St. Graal" deals merely with the early history of the Holy Grail. Moreover, it is not correct to say that Arthur "appears everywhere rather as looker-on than as participant" in the prose romances. A mere glance at the "Merlin" and "Mort Artus" will correct that impression; and indeed the difference between the prose and the metrical romances in this respect has been taken as one of the distinguishing characteristics of the former. Finally, in any account of the French prose romances mention should be made of the so-called "de Boron cycle" which has been the subject of so much discussion ever since the publication of the "Huth-Merlin" in 1886. As regards the sources of the Arthurian romances, Professor Schofield adopts the view which will now probably commend itself to all impartial judges, namely, that both Brittany and Wales furnished material. Yet we confess continued skepticism as to Gaston Paris's hypothetical Anglo-Norman romances concerning Arthur and his knights, of which not a single specimen has come down to us.

The remaining chapters on the tales, historical, religious, and didactic works, and lyrics in the vernacular, are thorough and adequate—like the excellent bibliography which concludes the work; and as a rule they are interestingly written. We take exception, however, to one feature: Professor Schofield's habit of presenting without qualifying phrase, as if definitely established, the result of investigations which he has himself conducted or which have been conducted under his influence. The value of these investigations no one will dispute, but they relate to controversial matters, in which absolute certainty will perhaps never be attained. We may cite as examples Miss Paton's identification of Morgain la Fée with the Morrigan, the Irish goddess of war, and Professor Schofield's own interpretation of the Horn-Saga as being of West Scandinavian origin and connected with the Isle of Man. The last-mentioned theory seems to us to meet all the difficulties of the problem better than any other proposed, but it certainly has not found universal acceptance. Even less likely to find general acceptance, in our opinion, is the view that "The Pearl" was inspired by Boccaccio's eclogue. This indubitably constitutes the most interesting parallel to the Middle English poem, which has been brought to light, but any direct relation of dependence between the two is improbable. A startling instance

of the above tendency is the offhand manner in which the author connects the Anglo-Saxon poem commonly known as "The Husband's Message" with the "Chèvrefeuille" of Marie de France.

In literary execution there is considerable unevenness. Parts are admirably written; for example, the introduction, distinguished by its freshness of treatment and breadth of view, the general discussion of the matter of Britain, and the chapter on religious works. On the other hand, the style, as we have intimated, betrays lassitude in the concluding sections of the chapter on romance, and in some pages of the chapter on Anglo-Latin literature. On the whole, however, the work is excellent.

Liberty, Union, and Democracy. The National Ideals of America. By Barrett Wendell. New York: Charles Scribner's Sons. \$1.25 net.

Professor Wendell would not, we presume, wish to count himself as preëminently either an historian or a publicist. He has not, so far as we know, given himself absorbingly to the study of law, or government, or sociology. We doubt if he would naturally be thought of as the man among us best fitted to write a constitutional history or advise a political party. His reputation, as he himself modestly puts it, is that of a rhetorician or literary critic. Yet he has written, in the volume before us, the most illuminating and stimulating exposition of American national ideals that has appeared for many a day. The book consists of four lectures given as a Lowell Institute course last year. Before that, the same material was used in lectures at the Sorbonne and elsewhere in France. Perhaps the necessity of explaining America to Frenchmen has helped him to look more intently for the main things. Perhaps his study of American literature has led him to a juster appreciation of the political ideas which, in moulding the American character, have made American literature possible. Whatever the cause, his book is the sort of thing we should expect a European critic to produce; and Professor Wendell, with all his cosmopolitanism, is distinctly an American.

The volume begins with an inquiry into the origin and nature of the American national character. To assume, as is commonly done, that our institutions have made our character, is to put the cart before the horse:

Our national character, we must freely admit, existed a century and a half before these institutions under which we now live came into existence. That the character and the institutions are closely interrelated, no one would pretend to deny. But it is not the character which results from the institutions; it is the institutions which result from the character implanted on the Virginian seaboard, and on that of New England, during the first quarter of the seventeenth century (pp. 32, 33).

As with other peoples, so with us, the origin of many social ideals must be traced to religion. To the Puritan of New England we owe much of our American idealism, our high standards of morality, our "saving faith in order," and our belief in popular education. Neither Puritanism nor Calvinism, of course, was born of America, but their working-out here was more

unfettered and consistent than in the England from which they were transplanted; while the pervading belief in the possibility of a godly life, and of a political society which should collectively do the will of God, was only superficially obscured by the hard struggle for existence which was long necessary. It was this very idealism that made our forefathers conservative, and prevented them from being carried off their feet by the revolutions which swept over England and continental Europe. The American Revolution, accordingly, is seen to have been not the origin of our nation, but the birth of our national consciousness. As Professor Wendell puts it, the "truly vital purpose" of the Revolution "was not to overthrow an immemorial system of government and society, replacing it by some philanthropic and untested new one. The vital purpose of the American Revolution was, with all the power of a newly conscious national existence, to maintain against reactionary innovation that historical continuity, those immemorial traditions of our own, which the unbroken experience of five generations had proved favorable among ourselves to prosperity and to righteousness. Alone of revolutions ours was essentially conservative" (pp. 85, 86).

With the ground thus prepared, Professor Wendell goes on to examine our national ideas of liberty, union, and democracy. Familiar as these ideas now are, they have not always been equally prominent. Liberty is the prevailing note of the Revolution. The Declaration of Independence is a sort of party platform whose "glittering and sounding generalities of natural right," as Rufus Choate called them, are subject in practice to substantial modification; but this has not prevented us from thinking of liberty as a concrete fact, not as an abstraction. As for defining the term, however, we have got no further than the never-swinging affirmation of the right of self-government. The difficulty has lain in the adjustment of loyalty to the community or State and loyalty to the nation, a difficulty enhanced by slavery and its aftermath. Out of the controversy has come the firm conviction of the North that there should be no legally privileged class, and that every adult male citizen should be allowed to vote; and the equally firm conviction of the older South that neither of these propositions could with safety be universally applied. Liberty, in short, was for long mainly local, and individual freedom an undefined affirmation. There remained to see whether individual and local freedom could consist with allegiance to a steadily predominating central government; whether one must not love his neighbor less as, perforce, he loved his country more.

The final answer came only with the Civil War. Not that the idea of union was then born. What the war did, rather, was to substitute what Professor Wendell aptly calls a "new unit of liberty" for the local loyalty which hitherto had widely obtained. It wrote into our fundamental law, in characters of blood, the rule that the union was to be perpetual. Around the evolution of this now axiomatic rule had centred two of the greatest controversies known to the history of constitutional government anywhere. For seventy years the crux of political discussion in this country was the question of State rights versus Federalism, until the localism everywhere familiar in

1830 had become, by 1861, only an outgrown tradition, a fading memory, a name to conjure with. Simultaneously, the New England conscience, emancipated from bondage to theology, turned with zeal to social reform, and called for human freedom until freedom came. The brilliant peroration of Webster's reply to Hayne was prophecy and hope, politically speaking, in 1830; for not until 1865 could we affirm that liberty and union had become, for all time, one and inseparable.

Regarding our "ancestral practice" of democracy, Professor Wendell shrewdly observes that "however fervently Americans may have believed that all men are created equal, they have never gone so far as to insist that all men must permanently remain so" (p. 267). We have always delighted in humble careers, but the true secret of our delight "lies not so much in the humility of their origin as in the picturesque contrast between their origin and their achievement" (p. 281). Democracy, in other words, has thus far meant with us only equality of opportunity. The fearfully depressing thing about present-day democracy the world over is the growing tyranny of the majority, the ominous demand for equality of social condition. Here, at last, we come to the gravest danger of our society, the point at which American democracy feels most profoundly the levelling spirit of proletarian Europe. Only in America has democracy shown itself able to expand without destructive revolution. Now is its day of trial, while all the world looks on.

We have made no attempt to summarize Professor Wendell's book, nor even to state completely the outlines of his exposition. We have only indicated a few of the more striking points on which he has flashed his lamp. With sober yet unconventional reflection, keen and matured insight, pervading reasonableness and good sense, and uncommon grace of speech, he has made clear some of the ideals which have made America great. The book should be widely read.

Drama.

Shakespeare and the Modern Stage. By Sidney Lee. New York: Charles Scribner's Sons. \$2 net.

Although the eleven papers constituting this volume were, with one exception, published separately by Sidney Lee between 1899 and 1905, they have been so carefully revised that, as a whole, they come as a fresh contribution to Shaksperian discussion. On almost every page they bear evidence of scholarship and sanity. His first paper on the Shaksperian revivals of the present day is even more timely now than when first printed half a dozen years ago; it summarizes, in convincing fashion, the disastrous effects upon dramatic art, and especially upon Shaksperian representation, of the current policy of expending vast sums upon scenic decoration and treating the text as comparatively unimportant. Like other earnest students of the theatre, he realizes how the system of long runs is robbing the stage of its actors and the public of its legitimate opportunities of entertainment and instruction. His position

is unassailable, but the arguments with which he buttresses it are too familiar to readers of the *Nation* to need recapitulation here.

As a rule, the modern manager takes refuge behind the assertion that the public will not endure Shakspeare except in spectacular form. The fallacy of this has been demonstrated over and over again. Edwin Booth made Shakspeare pay with shabby scenery—and a still shabbier company for that matter—for many years. Phelps, at Sadler's Wells, prospered on him for twenty years, with a most modest stage outfit. Henry Irving, of course, spent many fortunes on his scenery, and lost some of them, but that is no proof that he would not have been better off if he had spent much less. The plain truth is that the public will not support a bad Shaksperian performance unless some special compensation is offered. It is notorious that recent Shaksperian revivals in England, except those of F. R. Benson, were due chiefly to the dearth of other practicable plays. The managers who undertook them followed the evil precedent of Charles Kean, in reducing the mangled plays to glittering spectacles—as if they were intended to appeal to the eye only and not to the heart and mind—not so much because these managers mistrusted the power of the text or underrated the public intelligence, as because they were unable to produce the plays in any other way with the slightest chance of financial success. It has been impossible to depend upon the dramatic and literary beauties of these master-works to exercise the spell of their own magic for the simple reason that it has been impossible to collect a company of capable players. The Shaksperian actor is nearly extinct in England, as in this country, because the schools which formerly produced them, the old provincial stock companies, have been starved out of existence by the present system of syndicates and travelling stars.

It was in the provinces that all the best actors of the nineteenth century received their training and cultivated their powers. It was from that source that Phelps derived the company that helped him to make Sadler's Wells, for twenty years, the Mecca of intelligent British theatregoers. His career furnishes one of the brightest pages in modern dramatic history and the most unimpeachable testimony to the truth of Mr. Lee's theories. A far better all-round actor than Macready, and a man of more sterling character, he took Sadler's Wells, a low little music hall in the poor suburb of Islington, miles away from any recognized theatrical district, and, with a faith in the good taste of the working masses that seemed almost Quixotic, began to give good performances of Shakspeare at low prices. His scenery was inexpensive, but always appropriate; his company thoroughly capable. His house was crowded from the first, and before long lovers of Shakspeare from all parts of London were making pilgrimages to the new shrine. During his management he presented no less than thirty-one of Shakspeare's plays, and many notable but now unfamiliar pieces of other Elizabethan dramatists, as well as many famous comedies, ancient and modern, and miscellaneous plays, but always of good quality. He educated the Islingtonians

so effectually in the noblest drama in the language that their critical acumen became almost proverbial. The actor who scored a success before them needed no other certificate of competency. In the end Phelps retired with a comfortable fortune, the great bulk of which was made by sheer acting power out of unadulterated Shakspeare. What has been done once can be done again. But there must be actors.

Mr. Lee seems to suspect that the imagination of modern audiences may be less potent than that of their ancestors, who in the Georgian era were moved so profoundly by performances wholly devoid of scenic illusion; but is it not just as reasonable to suppose that the distractions of spectacle really prevent the exercise of the imagination which they are devised to excite? In an interesting article on the admirable work done by the stock company of Mr. Benson, who has chosen Phelps for his example, Mr. Lee does not allude to any lack of public appreciation.

Mr. Lee is an enthusiastic advocate of the municipal theatre, and illustrates its possible benefits by descriptions of the performances at institutions of this kind in Austria, France, and Hungary. But it must not be forgotten that the conditions on the European Continent are widely different from those which prevail in London or New York. In Europe there are no great theatrical Trusts, like those in England and America, which undoubtedly offer extraordinary opportunities to popular actors of all kinds and pay salaries which no municipal theatre would be likely to offer. This is one of the conditions which has made it difficult for Mr. Benson to keep his forces intact. A moderate, regular income and the promise of a pension suffice to hold the Continental actor, but would be a much weaker inducement in New York or London. With inferior performers municipal theatres would not attract much patronage or be able to effect much good.

Among the most interesting papers in Mr. Lee's volumes are those on Shakspeare's philosophy, oral traditions, and the perils of unscientific research, but space will not permit more than this reference to them. There is not a dull page in the book.

Georgia Cayvan, who died on Monday, after a long period of suffering and retirement, occupied a higher rank artistically than some of her associates enjoying more prominent positions in the eye of the world. Her distinguishing characteristics were a sound intelligence, conscientious study, a healthy comprehension of the elemental human emotions, and a pleasant, ingenuous manner. Of subtilty she had but little. Her strength lay in the suggestion of an honest, hearty, generous nature, and in the open expression of strong, simple feeling, whether scorn, passion, indignation, or love. When the emotion was veiled or complex she was less successful. In the lighter phases of comedy, her natural geniality, her quick understanding, and her ability to deliver a bit of repartee, enabled her to carry off scenes with vivacity and charm. She was born in Bath, Me., nearly fifty years ago, but was reared and educated in Boston, where, while still young, she began to give readings, varied by imitations of birds. She made her first ap-

pearance upon the New York stage as Dolly Dutton in "Hazel Kirke" in June, 1880. A few months later she was playing the part of the heroine on the road very successfully. In 1881 she appeared as Jocasta in George Riddle's excellent production of the "Cedipus Tyrannus." Her performance was notable for classic pose and admirable declamation. After this she played with success in various rôles until she reached the position of leading lady in the Lyceum Theatre of this city. There most of her best work was in "The Wife," "The Charity Ball," "Squire Kate," "Sweet Laverder," "The Idler," "Old Heads and Young Hearts," "Lady Bountiful," and "The Amazons."

Rudolph Besier's neo-classic play, "The Virgin Goddess," which has created such a stir in London, is controlled by Oscar Asche, who is now acting the central character. He is soon to make a tour of the British provinces with it; and later he expects to visit Australia and the United States. He may not reach this country till season after next.

Music.

How to Appreciate Music. By Gustav Kobbé. New York: Moffat, Yard & Co. \$1.50 net.

Famous American Songs. By Gustav Kobbé. New York: Thomas Y. Crowell & Co. \$1.50 net.

There are thousands of persons who, because they neither play nor sing, think they have no right to call themselves "musical." To them Mr. Kobbé says: "If you love music and appreciate it, you may be more musical than many pianists or singers; and certainly you may become so." It is to help these thousands to "become so" that he has prepared his volume, "How to Appreciate Music." It is written in wholly untechnical language, yet any one who has read its 275 pages will know more about the art and its history, and the greatest composers and performers and works, than nine-tenths of the professional musicians know. The opening chapter is quite properly devoted to the most universal and important of instruments, the pianoforte. A few subheads may be cited to illustrate the author's unpedantic and entertaining manner: "Liszt played the whole orchestra on the pianoforte," "Paderewski's playing of 'Hark, Hark, the Lark,'" "Richard Strauss on Beethoven's pianistic orchestration," "Nine centuries to develop pianoforte from monochord."

Here are elucidation, history, criticism, gossip, anecdote, cleverly commingled, making the book one that can be read for entertainment as well as instruction. Interesting also are the other chapters, sixteen in all, which are concerned with Bach, fugues and sonatas, symphonies, operas, songs, and all other branches of music. Chopin, Schumann, Liszt, Paderewski, and Richard Strauss are honored with separate chapters—a fact which indicates the modernity of the author's taste. He is not one of those who lift their eyes heavenward every time the words "sonata" or "symphony" are mentioned. He is frank and courageous in the expression of his own views; and,

as he says, "something is due the great body of music-lovers who, being told that they *must* admire this, that, and the other classical composer, *because he is classical*, find themselves at a loss and think themselves to blame because modern music makes a more vivid and deeper impression upon them. If they only knew it—they are in the right! But they have needed some one to tell them so."

Mr. Kobbe's "Famous American Songs" consists of seven chapters, devoted to "Home Sweet Home," "Old Folks at Home," "Dixie," "Ben Bolt," "The Star-Spangled Banner," "Yankee Doodle," "Hail Columbia," and "America," and "some war songs." It is significant that the first two of these are concerned with home. In studying the subject of popular songs, the author came to the conclusion that the sentiment most deeply implanted in the human heart, as expressed in music, is love of home. Patriotism may replace it, in time of war, but "comparatively few popular songs, which have survived, celebrate the love affairs of young men and women." Another thing he has noted with regard to songs which live on from generation to generation is "their freedom from immoral suggestion." The method followed in this book is to tell how the songs or airs happened to be written, and to relate the stories of the composers' lives, so far as known. Of special interest is the chapter on "Old Folks at Home" and its composer, Stephen Foster, whose importance as not only one of the greatest of American composers, but also one of the most original melodists of all times, is being more and more fully recognized.

While the policy pursued during the last three years by the New York Philharmonic Society, of importing for each season half-a-dozen eminent conductors undoubtedly afforded interesting opportunities for comparisons in orchestral interpretation, more satisfactory results can, on the whole, be achieved under a single conductor, provided he be of the first rank. Wassily Safonoff is of that rank; and he is now to be with us for at least three years, not only as orchestral interpreter, but as director and professor of the pianoforte at the National Conservatory. At the opening Philharmonic concert, last Friday, he created a sensation by his virile, dramatic, and emotional performance of Tchaikovsky's fifth symphony—a performance which caused not a few to revise their opinion and place this work even above the "Pathetic," which is the most popular symphonic work of the last quarter-century. The wail of the slow movement seemed like the agony of Siberian exiles, while the cyclonic sweep of the last movement was a feat which it takes not only a Russian, but a Safonoff, to perform. It would be a great mistake, however, to suppose that this conductor is simply a Tchaikovsky specialist. The high-strung Tchaikovsky adored the simple and serene Mozart, and so does Safonoff, as he evinced by his performance of that composer's "Kleine Nachtmusik." He also gave a vigorous reading of Beethoven's "Coriolanus" overture. Mr. Lhevinne played Rubinstein's D minor concerto, to the great satisfaction of the audience.

A public appeal for contributions to the Edward MacDowell fund of the Mendelssohn

Glee Club has been written by Prof. Henry van Dyke and signed by many well-known men. The fund will be administered primarily for the support of Mr. MacDowell, and secondarily for a fitting memorial. Probably the property which has been his home at Peterboro, N. H., will be made a resting spot for students in all the arts.

Signor Bonci, who is to sing this season at Hammerstein's new Manhattan Opera House, in a sort of rivalry with Caruso at the Metropolitan, is about thirty-six years of age, a native of Cesena in the Romagna. At the age of twenty he entered the Rossini Conservatory of Music in Pesaro, where he studied for six years with the only teacher he has ever had, Maestro Cohen. On completing his studies there, ten years ago, he made his *début* in the part of Fenton in Verdi's "Falstaff," at the Teatro Regio di Parma. He was immediately engaged to sing Faust at the Teatro della Scala, Milan. Since that time he has appeared with success in Paris, Berlin, London, Vienna, Madrid, and other Continental centres.

Art.

NOTES ON BOOKS.

Two books of a purely utilitarian character are Edmund von Mach's "Outlines of the History of Painting" (Ginn & Co.) and "Terms Commonly Used in Ornamental Design," by T. Erat Harrison and W. G. Paulson Townsend (imported by Charles Scribner's Sons, New York). The important part of Professor von Mach's book is a series of tables "grouping and grading all the artists" of importance in the history of painting from the thirteenth century to the end of the nineteenth, with the aim of assisting the student to obtain a comprehensive view of the whole field, and, incidentally, of supplying a system for the cataloguing of collections of photographs. The painters are grouped by nationalities, dates, subject-matter, style, etc.; and graded, as to relative importance, by means of differences of type and other devices. All this is extremely well done, and there are few faults to find with inclusions or exclusions; the gravest being, possibly, the rating of Carpaccio as a painter of the first rank and the exclusion from that rank of the vastly more important Maccaccio—a man of almost incalculable influence on those who followed him during a hundred years. In dealing with the nineteenth century, and particularly with this country, the lists become perhaps too inclusive, and the ratings become, more or less, a matter of taste, but the selections are generally intelligent. At the end of the thin volume is a sketch of the history of painting, not ill done, but no better than many to be found elsewhere.

The authors of the other little volume are "Examiners to the Board of Education," and it may fairly be considered a sort of cram book for their examinations. It consists of a series of definitions of such terms as "scroll," "all-over pattern," and the like, with illustrative examples, and is intended "to correct the frequently inexact use of terms among students." The illustrations are interesting and well chosen.

A book of a very different kind is "The Education of an Artist," by C. Lewis Hind (New York: The Macmillan Co.), in which are set forth certain episodes in the life of one Claude Williamson Shaw, an employee in a publishing house, who at the age of thirty-three determined to become a painter, tried landscape painting in Cornwall and figure-drawing in the ateliers of Paris with equal unsuccess, and finally, deciding that desire, is not equivalent to ability, settled down to writing as his medium of artistic expression. Whether it should be reckoned as fiction or as autobiography is questionable, but the book should be called "The Making of an Art Critic." For that the art-critic is the failure in art is as true as if Disraeli had not said it, and, on the whole, it is well that it should be true. It is inevitable that such an one as Claude Williamson Shaw should write about the art he has striven to practise, and it is well that those who are to write of an art should have cared enough for it to make the effort at original production in it. R. A. M. Stevenson, the best of recent art critics, is the type of the failure in art who makes the critic; and if Fromentin cannot be called a failure as an artist, he was yet much less unequivocally successful as a practitioner of painting than as a writer about it. If the critics are not to be the failures in art they must be either successful artists or no artists at all. The first seldom have the ability and seldomer the desire and the leisure to write, and the second have no business to write of a subject they know and care nothing about. The purpose of the book we take to be the binding together of a number of impressionistic and subjective criticisms of some of the masterpieces of painting in European galleries. These make pleasant, if not especially profitable, reading—Mr. Hind is no Stevenson—and afford an excuse for a wealth of illustrations, mainly well executed reproductions of celebrated pictures.

Impressionistic, also, are "Moorish Cities in Spain," by C. Gasquino Hartley (Mrs. Walter Gallichan), and "Romantic Cities of Provence," by Mona Caird, both issued by Charles Scribner's Sons. Both are books of travel, but the first is professedly one of the "Langham Series of Art Monographs," while the second may be rated as an art book in virtue of its illustrations. Both aim at the expression of moods and the reproduction of atmospheres rather than at the statement of fact or the affording of information; both are measurably successful; both possess charm. The drawings of Moorish cities by Elizabeth Hartley are markedly inferior to the reproduction of photographs in the same volume, and might better have been omitted. They are probably accurate enough, but are coarse in feeling and clumsy in execution. Their repellent rather than attractive effect is a capital example of the importance of technical excellence in matters of art. Mr. Pennell, on the contrary, could make almost any material interesting by the brilliancy of his technical treatment, and his drawings of Provence, as of so many other places, make one long to go there—perhaps in quest of disappointment. His fellow-illustrator, Edward M. Synge, is far from his equal, but he is a capable workman, not an amateur. Perhaps he neither glor-

lives nor minimizes his material, but gives us something like a fair equivalent for it in the terms of black and white design.

America is taking a place in the work of Egyptian exploration and excavation. Recently, the Metropolitan Museum in New York announced its entry upon the field, and the University of California has already published a valuable volume of reproductions of papyri fragments. Theodore M. Davis, who signs himself from Newport, but who spends a large part of his time in Egypt, has already given earnest of his enthusiasm in a sumptuous volume on Thothmes I. This year again he has published another large volume, which constitutes a valuable addition to our special literature. The scene of his labors was at Bibân el Molûk, opposite Thebes, and the particular object was the exploration of a rock-cut tomb, which proved to be the tomb of Hâtshopsitû. Mr. Davis contributes a modest introduction; Dr. Edouard Naville writes exhaustively upon "The Life and Monuments of the Queen," and Howard Carter, the inspector-general of the Service des Antiquités, furnishes a "description of the finding and excavation of the tomb." The entrance to the tomb has been known from time immemorial, but its interior had not been explored for many centuries, and no one knew whose tomb it was. It was filled with dirt and small stones which had been compacted in places into a sort of concrete. The passageways and chambers have now been cleared completely, to a total length of nearly eight hundred feet and a sloping depth of over three hundred feet. The outcome of the labor spent in excavation was the determination of the ownership of the tomb and the finding of the sarcophagus of Thothmes I., and that of his daughter, the great Queen Hâtshopsitû (Hâtshepsut: Hatasu). These magnificent memorials are now in the Cairo Museum. The only texts found, except the usual funerary formulæ engraved on the sarcophagi, were on slabs of stone intended for the facing of the final chamber, and were taken from one of the funerary writings of the Egyptians, the "Book of that which is in the Underworld." The volume is one which appeals to the layman as well as the specialist. One who wishes to see how a biography can be pieced together from small bits and scraps of information, will find an excellent example in the contribution of Dr. Naville, and the modest account given by Mr. Carter shows how little the difficult and arduous labor of the explorer may lend itself to self-laudation or personal exploitation. Both men are perfectly qualified for their tasks, Mr. Carter from his official position, and Dr. Naville from the fact that he has been long engaged in the excavation of the unique temple of Queen Hatasu, which nestled under the hills that bound the desert, hidden and forgotten beneath great masses of débris. (London: Archibald Constable & Co. Folio.)

Garrett Chatfield Pier has sent forth the first volume of the catalogue of "Egyptian Antiquities in the Pier Collection" (University of Chicago Press). It consists of specimens represented in twenty-two plates, and includes objects in glazed pottery, flint and other stones, ivory and other materials. There are pendants, or-

naments, inlays, and amulets, but the chief place is given to more than two hundred scarabs, seals, and cylinders. The catalogue describes the articles which the plates picture—a combination which would be exceedingly useful to the lay collector if the author had taken the pains to be a little more exact in his arrangement of transliteration and translation. There are some transpositions of order which must prove misleading to the novice. An instance occurs on the first page of the text. The system of transliteration is that of the school of Professor Erman of Berlin, and while it is admirably precise in notation, it cannot be pronounced. Occasionally the ordinary transliteration is also added. The scarabs and similar objects here shown are mainly historical, including names of rulers from the early dynasties to the Ptolemies. The descriptions are brief and yet sufficient for the most part, and the author has noted as far as possible both the provenance of the object and the place and date of its acquisition. The whole is a conscientious and useful piece of work, free from ostentation and creditably performed. The value of the book is increased by the excellence of the reproduction of the legends and devices on the scarabs.

Students of art history who may buy in good faith a book entitled "The Newest Light on Rembrandt," should be warned that it is merely a *jeu d'esprit* of three well-known Rembrandtists, Dr. W. Martin, Wouter Nighoff, and Dr. Hofstede de Groot. A description of the joke, which seems none of the best, may be found in the London *Athenæum* for November 3. The alleged documents were made of bits of Rembrandt's writing, pieced together, and then photographed. As a diversion between intimates this was well enough, but it seems a questionable matter of taste, not to say morals, to publish the book in the usual way, as a "Supplement" to the well-known "Urkunden."

The *Burlington Magazine* for November is more of a miscellany than usual. Lawrence Binyon's article on portrait drawings of English women, including graceful examples from Lely's hand and school, leads up to "London Leaded Steeples," which, in turn, yield to Saint Cloud porcelain, by M. L. Solon. Next we jump abruptly to Catalan primitives as elucidated by A. van de Put, and pass through Herbert Cook's "Notes on the Study of Titian"—chiefly a closer determination of the work of Francesco Vercellio—to S. M. Peartree's account of the Historical Exhibition at Nuremberg. There are other items, such as Sir Walter Armstrong's little paper on Alessandro Olivero, a practically unknown pupil of one Alvise of Bergamo, but enough has been said to show that the current number offers excellent pickings for tastes of an antiquarian sort.

At the instigation of the Liceo Moderno of Naples, a committee has been formed to arrange systematic excavations at Cumæ in Campania. Cumæ, founded in the eighth century B. C. by some Eubœan sailors, was the first Greek colony on Italian soil, and subsequently played an important part in history. As the northern outpost of Greek civilization, it was the means of spreading

Ionian influence over the whole of central Italy. Cumæ retained its supremacy in Campania until the fourth century B. C., when it was outgrown by Capua.

The excavations for the unearthing of the Roman theatre at Verona are being energetically carried on under the direction of Prof. Gherardo Ghirardini of the University of Padua and yield interesting results. The theatre occupies an area of 15,000 square metres. Soon this important monument will be freed from all the small houses which for a long time have grown up like mushrooms over the site. Only the little church of Santi Siro e Libera, which was erected in the ninth century A. D. among the imposing ruins, will be spared.

At the fall meeting of the National Academy of Design the following associates were elected: Painter, A. L. Groll; sculptor, Isidore Konti; architects, Walter Cook, Cass Gilbert, Thomas Hastings, and George B. Post; engravers, Timothy Cole and C. F. W. Mielatz.

The Art Club of Philadelphia has opened its annual exhibition. Among the artists whose pictures have attracted special attention are Albert L. Groll, Charles Warren Eaton, B. K. Howard, Mary Cassatt, Lillian Genth, Martba Walter, Paula Himmelsbach, and W. W. Gilchrist. The gold medal was awarded to Frank Benson for "Pomona," a single figure in the open air, painted with that fulness of light and color that is characteristic of his treatment of sunlight; and honorable mention was awarded to Henry Ritzenberg's portrait of his father.

Prof. Adolf Furtwängler has been appointed director of the Antiquarium in Munich. This post has been vacant since the death of Prof. W. von Christ.

Gabriel Ferrier has been elected to the vacancy at the French Académie des Beaux-Arts caused by the death of Jules Breton. The new member is a portrait painter, and a regular exhibitor at the Salon.

A new catalogue of the Museum of Old Masters at Brussels has just been issued. There was no real catalogue till M. A. J. Wauters's modest effort in 1900. During the last six years he has been engaged on the revision and enlargement of this work. The scholarly accuracy of this catalogue contrasts, according to the London press, with the new catalogue of the foreign schools at the National Gallery, which seems to be little improvement on the old. It is practically a reprint, with several misprints repeated and only a limited number of additions and alterations.

The Königswarter art collection was sold by auction at Berlin on Tuesday. A portrait of Rembrandt by himself brought \$45,000; Rubens's portrait of Consul Marsejar, \$21,000; a landscape by Cuypp, famous for its morning sun effect, \$18,000; two life-size portraits of men, by Van Dyck, \$14,000 and \$15,000; a small rococo, by Lancret, \$15,000; a Teniers landscape, bought for the Kaiser Freidrich Museum, Berlin, \$7,500; portrait of a man, by Franz Hals, \$7,250; four paintings by Adrian van Ostade, \$9,750, \$8,250, \$10,000, and \$10,500; Hobbema's "Hut on a Mountain Path," \$10,500; Canaletto's "Piazzetta," \$8,100; Reynolds's portrait of himself, \$6,000. The Italian paintings, which were not of the

highest quality, brought lower prices than the work of Dutch artists.

NATURE STUDY.

The Wit of the Wild. By Ernest Ingersoll. Illustrated. New York: Dodd, Mead & Co. \$1.20 net.

Brier-Patch Philosophy. By "Peter Rabbit," interpreted by William J. Long. Illustrated by Charles Copeland. Boston: Ginn & Co.

Camp Fires in the Canadian Rockies. By William T. Hornaday. Illustrations by John M. Phillips. New York: Charles Scribner's Sons. \$3 net.

My Garden. By Eden Phillpotts. New York: Imported by Charles Scribner's Sons. \$3.75 net.

As a title, the "Wit of the Wild" smacks decidedly of the "new school," but not even the fact that Mr. Ingersoll has devoted himself more or less to the distribution of natural history by way of the Sunday supplement has weaned him from the habit of careful observation and modest statement instilled by competent scientific training. In reading him one finds no difficulty whatever in distinguishing what he has actually seen from what he merely infers, nor is he unaware that a safe inference must have a sound foundation in demonstrable fact. While far less conservative than Burroughs, for instance, in treating the borderland between instinct and reason, he is still fairly on the conservative side, and a child may read him with no danger of being seriously misled. Weasels, opossums, squirrels, and various forms of bird and sea life are considered in the present volume, which is made up from contributions to several periodicals, all of the popular type. Of particular importance with reference to present conditions of nature study are certain passages dealing with animal instincts not apparently useful under present circumstances, and hence supposed to have been retained through mere force of inherited habit, even after they have become not only useless, but positively harmful. The feigning of death by the opossum is so treated, but in all such matters Mr. Ingersoll speaks only tentatively, and with becoming caution.

"Brier-Patch Philosophy" is the *Apologia pro sua Schola* of the anti-science group of nature writers, from the pen of their high priest, the Rev. William J. Long. We use the term "anti-science" justifiably, for Mr. Long sets himself sturdily and persistently, all through his volume, against what he conceives, though often wrongly, to be the very foundation principles of scientific method in the field in question. It should perhaps be added here that in points in which he misinterprets genuine scientific method he has sometimes had plausible reason for going wrong, in the assaults which have been made upon his own methods by certain scientists who have written with more heat than caution. In questions of scientific truth a mistake on one side will never be corrected by a corresponding lurch to the other extreme. Any reader acquainted with Mr. Long's earlier work will find in this volume in gen-

eral a distinct gain in carefulness of statement. The wild animal is no longer such a marvel of the most intricate, logical, and persistent intellectual processes as the unwary reader of the "School of the Woods" must infer. "An animal thinks when he must, and then only just enough to take care of himself; after which he goes quietly back to the pleasant ways of making himself in harmony with his universe." But after all, Mr. Long is still convinced that the best way to get at an animal's brain processes under any given circumstances is to reason sympathetically from what goes on in your own head under similar conditions. In other words, he is still ready simply to assume, on purely theoretical grounds, his own view of the main point of difference between himself and the devotees of a more cautious method. In apparently elevating the reasoning powers of animals by the easy method of satirizing the unreason of men, he reaches his highest point of plausibility. But plausibility and proof are two very different things, and it is just in the failure to distinguish carefully between them that Mr. Long has always shown himself radically weak. Doubtless the very controversy which has been stirred up by Mr. Long's writings will secure from scientists themselves more careful study of such rudimentary intelligence as animal life does possess. For this quickening Mr. Long is entitled to some credit, but we may take it for granted that any substantial gains in this field will come from the application of a rigidly scientific method, and not from the bald assumption of a detailed parallelism between the mental processes of widely separated forms of sentient life.

This new book by Mr. Hornaday, director of the New York Zoological Park, takes us into the more rugged mountains of southeastern British Columbia, and has to do primarily with the study of mountain goats and sheep, though the author is too much of the old style naturalist to be at all exclusive. By far the most interesting passages in the book are those which detail the daring exploits of his companion, State Game Commissioner Phillips, of Pennsylvania, in securing the admirable photographs which adorn its pages. The process was simply to corner a wild goat on some broken ledge on the face of a mountain too steep to allow any chance of escape, either upward or downward, and then press up within a few feet of the quarry and use the camera. A misstep, a charge by the cornered animal, or any one of a half-dozen other possible mishaps, would in some of these situations have meant instant death to the daring photographer. Mr. Hornaday asserts bluntly that the danger was too great and ought not to have been incurred. On his return trip he brought five young mountain goats to the New York Zoological Park, but he is not enthusiastic as to their ability to adjust themselves to the climate of the Atlantic seaboard. A chapter on the snow-slides of the Canadian Rockies, describing their almost incredible effect in grinding down the mountain slopes and filling up the valleys, impresses vividly upon the reader the geological newness of the region. We may quote here a few sentences of description:

One incident that awakens one to a realizing sense of the majesty, and at times

the terrors, of the forces exerted in that spot is finding the brawling waters of the creek disappearing under a hill of slide-rock nearly forty feet high. The avalanches have rushed this great mass down from the Phillips Mountains and piled it clear across the valley. But for the open-work character of this great natural dam, which permits the waters of the creek to run under it, the valley above it would now be a lake, thirty feet deep at the spot where our camp stood.

Mr. Hornaday is, of course, vigorous in his advocacy of such improvements in the game laws and their administration as will permanently preserve the animal life of this region, especially the bears, sheep, goats, deer, and moose. After all, the real friends of all forms of our native wild life are not sentimentalists, who carry on an impossible propaganda against any killing at all, but the intelligent sportsmen and naturalists, who do not hesitate to indulge their pleasure in rod or gun on due occasion and in due measure.

"My Garden," with its copious illustrations, is certainly a pleasure to the eye, and we find its leaves besprinkled with a pleasant humor here and there. The general reader, however, will shy at the constant stream of technical botanical names, and most of those to whom these names really mean something will question seriously the taste of the garden-enthusiast who apparently sets no limit but those of standing-room and climate to the number of genera, species, and varieties which may allowably be crowded into one small garden. The book contains many valuable bits of information for the amateur, but it has no index. The author's particular favorite is the iris, and the three chapters which it receives must be excepted, in the main, from the criticism which we have passed upon the book as a whole.

In the *Geographical Journal* for November Major P. M. Sykes describes his recent travels in Persia, dwelling particularly on the physiography of the Lut, or great central desert, which he crossed from Yezd to Meshed. The results of the Percy Sladen expedition to the Seychelles are given by J. S. Gardiner. The discussion of his paper by members of the Royal Geographical Society is reported in full, special interest being shown in his theory that the connection of the islands and Madagascar with India was broken in the Secondary Period by the action of deep ocean currents. C. W. Hobley contributes some notes on the Turkana, an East African tribe, who are remarkable for their gigantic size and their morality. Adultery ranks first among serious offences, and cases of murder seldom or never occur. The pending boundary question of Uganda and the Congo State is discussed by Douglas W. Freshfield, in the course of which he quotes the testimony of Dr. Wollaston as to the treatment of the natives by a Belgian officer. The doctor was a member of the party sent out by the Natural History Department of the British Museum to explore the Ruwenzori region. The Belgian who commanded the escort "camped in the natives' gardens, cut down the sham-bas, at one place shot the village cow, while his soldiers looted the houses. In return for these barbarities, they rose up against him, and we suffered for it. . . . When we left Beni a week ago, they were

preparing a punitive expedition to quell these wretched people." Among the other contents are the papers on coast erosion read at the British Association meeting at York, and a brief account of what is said to be the record ascent for a woman, 23,264 feet, by Mrs. Fanny Bullock Workman, in the Nun Kun Mountains of Kashmir.

Recent work at the National Cannery Laboratory, an account of which has been published in the *Journal of the American Chemical Society*, has established the reason for the often observed discoloration of canned fruits and vegetables. The samples examined varied from actual brown or black deposit in the fruit or vegetable, through mere discoloration of the contents where they came in contact with the can, to the simple discoloration of the can itself. The discoloration indicates that a chemical change has taken place, and that another compound has been formed. A gas called hydrogen sulphide (H_2S), the same gas that is formed in rotting eggs, combines with some metallic salts to make varicolored compounds. The metals in canned goods are tin, lead from the solder, and possibly some iron. After the can is soldered, the tin and lead are chemically attacked by the acid of the fruit or vegetable, salts form, and these salts mix with the fruit or vegetable juice. Thus the oxalic or other acid of the vegetable acts on the tin and makes tin oxalate or similar salt. This action is particularly noticeable with the highly acid fruits and vegetables, such as rhubarb, but appreciable quantities of the metals are dissolved by squash, peas, and even corn. The foregoing process explains the presence of metallic salts. The hydrogen sulphide may come from one of three sources: first, improperly sterilized fruit may contain unkilld organisms—germs—capable of evolving this gas through the breaking up of proteid matter in the fruit; second, the sulphites sometimes used as preservatives may, by chemical action with the vegetable acid, form sulphurous acid, which in contact with tin produces hydrogen sulphide; third, by the prolonged action of the steam in cooking, the proteid matter of the fruit or vegetable may be broken up and hydrogen sulphide result from the decomposition. Whenever such metallic salts and hydrogen sulphide are produced they combine chemically to form a new compound. It has not yet been determined whether such small quantities of metallic salts in canned goods have a poisonous effect. Probably, however, the only result is that discoloration will make the goods less attractive in appearance and therefore less salable. The conclusions reached are that the use of sulphites as preservatives should be avoided; that, when fruits and vegetables that require long cooking are sealed, as little solder and flux as possible should be used, and that the tin plate should be of high grade and contain little or no lead.

The scientific investigation of the nature of earthquakes, which had its initiation in Japan under John Milne, has had good results. The contents of the seventy quarto volumes of Proceedings are virtually summed up by Professor Milne, in a paper recently read before the Royal Society. From the fifteen hundred observing stations reporting to the Central Meteorological Station in Tokio, it is shown that in

Japan between one and two thousand shocks occur annually, most of them at the base of its steep eastern suboceanic frontier. Fifteen seismic districts are mapped out. The observations have led to improvements in architecture in Japan.

Circulars numbered 119, 120, and 121 from Harvard College Observatory announce that in August and September nine additional photographs of Saturn, showing images of Phœbe, were obtained with the 24-inch Bruce telescope at Arequipa. The study of the distribution of variable stars by superposing a negative on a positive of a different date, has been continued this fall by Miss Henrietta S. Leavitt, with the result that she discovered thirty-one new variable stars. During an examination of photographs taken with the 1-inch Cooke lens, a new object was found, by Miss Leavitt, in the constellation Vela. The object does not appear on any plate taken before December 5, 1905, but is seen on fourteen plates taken since that date. The latest plate taken before its appearance was July 12, 1905, on which stars as faint as the magnitude 11.5 are clearly seen. In summing up the results of this study Professor Edward C. Pickering says:

The Nova shows considerable fluctuation in light during the period covered by the observations, and it is not impossible that it may again become sufficiently bright for its spectrum to be obtained. Even without such proof, there can be little doubt that the object observed is actually a nova.

Dr. Charles Lane Poor, professor of astronomy in Columbia University, announced in an address before the New York Academy of Sciences Monday evening that Frederick G. Bourne, Cornelius Vanderbilt, and others will found the New York Observatory and Nautical Museum. These men have agreed to raise an endowment and to purchase apparatus that will make the institution one of the best equipped in existence.

The Poirier bequest of 200,000 francs, left to the French Société de Géographie is to be used for a novel purpose—pensions for one-time explorers in need or for their widows. One of the first five to benefit by it is Désiré Charnay, who is now seventy-eight years old. He began on a Government mission in Mexico in 1857, and six years later, with the help of Viollet-le-Duc, published his "Cités et Ruines Américaines." Then for many years he wandered through South America, Madagascar, Java, and Australia, sometimes on the Government missions by which France encourages explorations, always writing illustrated travel articles for *Le Tour du Monde*. In 1880 Pierre Lorillard joined with the French Government in fitting him out for an extended expedition in Mexico, with rich results for museum collections and the book (1884) "Anciennes Villes du Nouveau Monde."

Finance.

TIGHT MONEY AND CURRENCY REFORM.

The publication of a plan for more elastic banknote issues coincides with renewed stringency in the money market. Such incidents as the recent deficit in the re-

serve of the national banks of this city and the 20 per cent. rate for call money will doubtless be used in urging Congress to action. Whether a defective currency system is or is not responsible for these troubles, it may easily have aggravated them.

The proposals formulated at Washington were the result of a conference between fiscal officers of the Government and committees of bankers professedly for the purpose of harmonizing the two projects known as the "Bankers' Association plan" and the "Chamber of Commerce plan." The outcome is a compromise, based mainly on the suggestions of the New York Chamber of Commerce. The agreement contemplates retention of the present form of banknote issues, secured, as heretofore, by deposit of Government bonds with the Treasury. It proposes, in addition, a "credit" or "emergency" currency without such bond security. In order, however, to prevent the retirement of the existing bond-secured circulation, and the derangement of the Government bond market through sale of the collateral, the new credit notes are to be limited, in the case of each bank, first, to 40 per cent. of its outstanding bond-secured notes, and, in case of further issues, to 12½ per cent. of capital. The first of these two instalments is to be taxed 2½ per cent.; the second 5 per cent.

It is further proposed that these credit note issues, inasmuch as they have no bond collateral behind them, shall be supported by the same cash reserve (25 per cent. in city banks and 15 in country institutions) as is required to be held against national bank deposits. This provision is altogether wise. It was, in fact, incorporated in the National Bank law during its first ten years of operation, and was abandoned, in 1874, on the single and explicit ground that the Government bonds, deposited to secure the note circulation, were a sufficient guarantee.

Public money deposited in the banks, is to bear 2 per cent. interest, but no collateral security is to be required for the deposits. This is a step beyond the Chamber of Commerce plan of 1902, which proposed the interest charge, but retained the idea of required collateral—merely enlarging the scope of acceptable securities. It is worth while to observe that in two respects our Federal Government's bank account differs from that of the British Exchequer, for instance, or even from that of New York city—both of which deposit their surplus funds in bank without requiring collateral. One is the enormous total to which, in our haphazard revenue system, the Federal surplus rises. To-day, the Government's bank deposits foot up \$135,000,000; they have ranged for six years in the neighborhood of \$100,000,000, and have been as high as \$168,000,000. The second point of difference is a consequence of the first: all national banks demand a chance at the public deposits. The responsibility of our fiscal officers would be considerably increased if they had to distribute these credit funds without asking security or special guarantee.

It is hardly to be expected that the expiring Congress, in its next short session, will act on this or any other thoroughgoing measure of currency reform. But it is also open to question whether, even with

the Sub-Treasury system and bank circulation laws reformed out-of-hand, Wall Street would promptly see an end of its money market convulsions. No serious financier imagines that it would. Neither the Treasury surplus nor restriction of bank circulation caused the disorder into which this autumn's markets have fallen. The cause is the overgranting of credit, for purely speculative purposes, by the very institutions which are now crying for relief, or for reform of the currency system. The most imperative need of the hour is a reform in the relations of fiduciary institutions to powerful Stock Exchange speculators.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 29, 1906.

The Week.

The German Ambassador's appeal, at the New York Chamber of Commerce dinner, last week, for a square tariff deal must not be allowed to fall on deaf ears. His exposition of the great growth of the trade between the two countries should rouse to action even those who can be moved only by self-interest. A vast amount of exploration and exploitation would have to be done in South America before our trade there could hope to reach the sum of \$350,000,000, which represents the business to be done between Germany and the United States this year. Shall this be deliberately decreased? Moreover, the amount of money each country is permanently investing in the other is steadily increasing. As a market for the sale of American bonds Germany has long attracted the attention of our capitalists. To meet the growing demand, a new bank in Berlin has just been started which will make a specialty of American securities and furnish accurate and up-to-date information to any German investor who thinks of purchasing our stocks and bonds. Every such enterprise will be hindered if there is a failure to agree on a reciprocity treaty. Continue on the present basis of unequal treatment we cannot. We must either improve matters by a new treaty or find ourselves at swords' points; for Germany, if the existing *modus vivendi* is not renewed or bettered, will be forced by her other treaty arrangements to discriminate against us. Every manufacturers' association and chamber of commerce in the country ought to be fighting for the very thing that Ambassador Sternburg asks.

That there is to be a determined effort to pass the Ship Subsidy bill at the coming session of Congress is now apparent. The President will be urged to follow up the speeches of Messrs. Root and Shaw with a recommendation in his annual message. In other words, the Republican leaders have failed to read the signs of the times. They are as fatuously disregarding the warning of the candidacies of Hearst and Moran as are our railway presidents. Neither of the two Secretaries seems to realize that the unrest among the voters is due to a desire to strike at special privileges. The ship-subsidy measure is nothing else than a bill to give special privileges to a few citizens, to induce them to embark in a business which would not pay for itself without Gov-

ernment aid. This sort of thing creates Socialists as quickly as any policy that can be devised. If it is defensible, there are plenty of exporters engaged in risky enterprises that are equally entitled to Government aid. Though they do not send the ships abroad, they do the cargoes which must be carried. In one aspect, the ship-subsidy campaign is ill-timed. The Commissioner of Navigation has just reported that if the present rate of construction is not checked by strikes or delays in steel, the output of our shipyards will be the largest in half a century. This is hardly a reason why the shipyards should be allowed to help themselves out of the public Treasury.

President Roosevelt addressed the Porto Ricans as "fellow-citizens." This is technically incorrect. They are not citizens of the United States—they are only subjects. Failure to give them a national status has been one of the most shocking cases of neglect of duty by Congress. Every Porto Rican travelling abroad is forced to undergo the humiliation of declaring himself a man without a country. "Are you an American?" "No." "Then you must still be a Spaniard?" "No." What, then, are you?" "I am a citizen of Porto Rico." Mr. Roosevelt showed that he was aware of this discrimination against one class of people under the American flag, and promised to do what he could to have it removed. He has before urged Congress to do the Porto Ricans this elementary justice, but thus far in vain. Let us hope that even the short session of Congress will not be too short to remedy this mean treatment of our island wards. But it has been notoriously hard from the beginning to do what President McKinley called "our plain duty" to Porto Rico. As a witty woman said at the time, the duty was so plain that it was actually repulsive.

We have been anxious to see what sign of encouragement the Home Market Club would detect in the result of the late election, with its defeats and reduced majorities for leading "standpatters." At last week's banquet, James W. Van Cleave, president of the National Association of Manufacturers, suggested a truly comforting line of thought. "I am not," he said, "an immediate revisionist, or a standpatter. I stand between the two. And I feel, especially since the election, that a large majority of the people are with me." The programme he proposes for the reconciliation of divergent views is as follows: Congress is soon to pass an

act creating a tariff commission like the one of 1882. Then all through the short session of the Fifty-ninth Congress and the long session of the Sixtieth, that commission is to pore over the Dingley schedules and take testimony as to what business interests desire. Then, and not till then, namely, in the summer of 1908, the Republican party is to promise to revise the tariff. The people will vote in November for the Republican candidates, of course; and some time after March 4, 1909, the new President will call Congress together and the sacred schedules will be touched at last. The suggestion differs from that of the "standpatter" only in deferring hope definitely for three years instead of talking vaguely about "next year" or the "near future." It differs from that of the sincere revisionist in that the latter would have the preliminary inquiry made in the regular manner by the Ways and Means and Finance Committees of House and Senate, and have the new tariff law signed by President Roosevelt, and not his unknown successor. President Van Cleave's proposal deserves the old lady's characterization as "a middle extreme."

The insistence by the junior Senator-elect from Arkansas that what the United States Senate needs is a "good, old-fashioned row," is not for the public to pass over lightly. We have heard about many things that the upper house needs: better men, a higher sense of patriotism, less corporation money, less talk, election by the people, publicity for executive sessions, a larger membership, a smaller membership, a redistributed membership, an age limit, a closure rule, the loss of control over appointments, with a gain of prestige by the House. But "Jeff" Davis now asserts that the real way to regeneration is through strife. He is going to tell the corporation-ridden graybeards just what he thinks of them, and right to their faces, too. What is more, he is not going to spend a half-hour in bowing and apologizing every time he touches a colleague on the raw. A little more than ten years ago something along the same line was said by another new Southern Senator, every bit as aggressive as Vardaman or Davis, and with considerably more of a record than either one of them for stirring up affairs at home. The question is, Will our latter-day fire-eaters go the way of Tillman and the radicals who have preceded him? For six years to come they will sit daily in a company of sweet-faced old gentlemen and impassive-faced old gentlemen who never lose their tempers, and never applaud the good things in each other's speeches.

Can flesh and blood maintain righteous and flaming wrath in the face of it? Peer Gynt, fighting Bojgen in the dark, had an easy time by comparison. "Shaking up the Senate" is, in fact, fitly to be compared with that other achievement attempted about as often by new members, "reviving its oratorical traditions." The boy orator is really half-brother to the shaker-up of dry bones; one expects to startle and amaze the Senate by what he says, the other by the way he says it. The Senate is used to both; it will not be ruffled by either. And if the new member is a sensible person, he will plunge into the routine of committee work as Tillman and Beveridge have done, and presently find himself with a reputation among his critical fellows.

Edward H. Harriman's statement that "the widest possible distribution of ownership of railway properties is a most desirable thing," will be applauded off-hand in many quarters, though there is another side of the question. In theory, no one would endorse the personal ownership of the great majority of shares in the Union Pacific, with its numerous subsidiary properties, by Mr. Harriman. Still less would people be pleased by the announcement that Mr. Rockefeller, for instance, had in his own name all the shares of two or three competing trans-continental railways. The contrasting ideal, which the public would accept with the most complacency, would be such distribution of ownership, in safe hands, as is common in many smaller corporations, where no officer or "insider" holds, personally or through combinations and affiliations, such a preponderating portion in the stock that he cannot be unseated; and where, accordingly, officers and managers can be called to account. We doubt, however, if this is exactly the sort of "distribution" which Mr. Harriman had in mind. Nobody who is "running" a great corporation to suit himself and his immediate associates, would approve such an arrangement. Railway men are aware that the most convenient ownership is the holding of shares by a great number of individuals widely separated, none of them possessing enough to make his voice of importance in an annual meeting. If votes for directors are cast at random, with the sole alternative of giving proxies to the existing management, that management can readily dispense with such an empty formality as actually owning a controlling interest. If this lesson had not been learned before, our life insurance companies would have taught it. The defect of this "widest possible distribution" is that it leaves a very slight check on the errors or misdeeds of a virtually self-perpetuating executive.

Peary's own account of his winning

the farthest north shows the achievement to have been possible through an extraordinary combination of good luck and good management. The remarkable dash from the Roosevelt would have been in vain if at the last the condition of the ice had not permitted a matter of 130 miles to be made in a few days—an almost unexampled feat on the polar ice; and it is fair to add that the story of the new record would never have been told if Peary's associates, equipment, and personal leadership had not been of the best. Indeed, the journey back over the crumbling ice to northern Greenland constitutes the most thrilling part of the narrative. Of the fifty-two days spent between the last land and the new farthest north, twelve were lost through storm or open water. In about 290 miles of actual sledging, the party, numbering at the last seven men and six teams, consumed forty days. Provisions were failing and the weaker dogs were being fed to the stronger, when the great opportunity appeared. The six days' storm, which had drifted the party seventy miles eastward to near longitude 65° west, had also beaten the snow into the crevices of the ice pack. Then an extraordinary march of more than thirty miles was made in a single day. A few days later the new record was made after a continuous march of twenty-four hours, ending on the noon of April 21 last. It is evident that, had not circumstances favored this final spurt, it would have been quite impossible to pass Nansen's mark of 86° 14', not to mention the Duke of Abruzzi's 86° 33'. On the other hand, it was a kind of luck upon which the gallant Peary had reckoned, and by which he profited with foresight and daring. The history of Arctic exploration has no finer chapter. Yet the bearing of this expedition upon Polar exploration generally can only be surmised. It is clear that without the delay of twelve days on the march northwards which depleted the stock of provisions, and with equally favorable conditions at the end, Peary might readily have got, say, a hundred miles nearer the pole. When it is recalled how far North the Fram drifted, it would seem that a dash with sledges from such a floating base might, under fortunate circumstances, bring some happy explorer within considerably less than 200 miles of the pole. The getting back will always be the pinch, though some emulator of the unfortunate Andree may yet do the trick by balloon.

Dr. Algernon S. Crapsey's letter of withdrawal from the Episcopal Church is written in excellent taste and with deep religious feeling. Any Church would be the poorer for losing such a man. Such gifts as his are too rare in any communion. He makes it clear that

he was seeking neither notoriety nor martyrdom, but was, out of a sense of duty to others as well as himself, challenging "an authoritative and deliberate decision" of the Church whether his views were permissible. Having now got it, he retires with dignity; but how can he say, as he does, that the judgment against him "affects no person" but himself, and urge the "hundreds of clergymen and thousands of laymen in the Episcopal Church who have reached the same conclusions that I have" to stay in the Church, where, Dr. Crapsey alleges, their "position is just as tenable as it ever was"? This seems to us to be in the interest neither of ecclesiastical order nor of sound morals. Every clergyman must, of course, settle the question with his own conscience; but the idea that the progress of truth or the reform of the creed can best be effected by remaining in a morally ambiguous position, is one to which we find it difficult to subscribe.

The so-called honor system in colleges has been much discussed of late. Championship of the system, it is to be noted, comes largely from the South. Many Southern professors declare that not only in examinations, but deportment generally, Southern students are bound by the honor of a gentleman. A similar sentiment, we are assured, frowns upon and keeps down horse-play in the classroom, "ragging" professors, and other demonstrations that in too many colleges of the North are regarded as lawful recreations. The South, it is plain, is exceptionally blessed. Where a clear-cut student sentiment exists in support of a high code of ethics, faculties would be foolish, or worse, to run counter to it. The existence of such a sentiment, as a fixed tradition, is evidently far different from the deliberate attempt to create it. President Hyde's remarks in the *Nation* of November 15, for instance, apply not so much to the Southern institution, as to the honor system as consciously introduced in the North. He is right, we feel, in doubting if the results of the propaganda have fulfilled its promise. The honor system in the North is weak precisely where the liberal régime in the South is strong—namely, in an aggressive student sentiment to enforce it. President Hyde recalls that in a college in which evidence of cheating is referred to a student tribunal, no evidence except that of the blue-books has ever been presented. This means either that for several years no student has ever seen a college mate cheating, or that the express agreement to report and discipline offenders has been persistently disregarded. So apparent is it that a certain amount of cheating has gone on that advocates of the system often rest merely on the assertion that there is less cheating, after all, than there was when the activity of

proctors made it a kind of sport. If this be the case, it is clear that student sentiment remains pretty much what it was, and that the adoption of a system has not inculcated an effective sense of honor; it has nowhere evoked a public feeling so tonic and formidable as that which prevails south of Mason and Dixon's line.

Prince Bülow's second-day speech in the Reichstag passed from the general subject of German foreign policy to the means of carrying it out—the diplomatic service. He diverged into a witty discussion of the "new diplomacy," made necessary by modern developments. He said that he was in the habit of advising young diplomatists to take for their model Alcibiades. He was "intellectual with the Athenians, ate black broth with the Spartans, and wore flowing garments among the Persians." Yet, what help, in the actual transaction of his business, does a diplomatic representative gain from being thought a jolly good fellow, or—in the United States—from having, what foreign nations now seem to regard as indispensable, an American wife? Not much, we think. Of course, the personal and social advantage is obvious. We all like approachable and interesting foreigners, whether of diplomatic rank or not; but because Sternburg lets Roosevelt beat him at tennis, are we to knuckle down to Germany in the tariff controversy? Because M. Jusserand is scholarly and affable, and Madame Jusserand charming, are we the less strenuously to protect Lodge's bogus jewelry from competition with the real French article? Even if the suggestion that Mr. Bryce be made British Ambassador were carried out—and surely this country should receive him with open arms—should we allow his great personal popularity to weigh in settling the fisheries dispute? The expounders of the new diplomacy are mixing up two different things. An ambassador represents his own people. Therein, it is of the highest importance that he should be agreeable, friendly, captivating—what you will. But he also represents his Government. That is a business capacity. In the questions arising out of it, personal charm has to give way to force of reason and the true interest of the two countries. Representatives of one people to another have a useful function; the more gracious and sympathetic they are, the better. But for an insinuating Alcibiades-diplomat to presume upon his personal acceptability as a ground for demanding governmental favors, would be much like an amusing guest at a dinner suddenly asking his host for a loan.

Berlin finds it difficult to predict what

new phase the racial struggle in Prussian Poland may assume in consequence of the sudden death of Dr. Florian von Stablewski, Archbishop of Posen and Gnesen, which occurred on Sunday. As an uncompromising champion of the Poles in their resistance to the complete Germanization of the schools, he made himself extremely obnoxious to the Prussian Government. Nevertheless, to force the election of a German Archbishop in succession to Dr. Stablewski, as the *Kölnische Zeitung* strongly urges, might only add to the bitterness of the conflict. On the part of the Government, it would be carrying the war into the enemy's camp by threatening the very citadel of Polish influence and aspirations—namely, the Catholic Church. What Catholicism means to the Poles is well expressed by the Paris *Temps*, which speaks particularly of the situation in Russian Poland, but makes no exception of Posen: "People are converted, not to Catholicism, but to the 'Polish faith.'" Entrance into the bosom of the Roman Church is so little an act of religion, and so largely a political step, that it used to be common to hear Poles of the middle classes say: "Were our country to achieve its freedom tomorrow, we, too, could cry, *Los von Rom*; but the Roman Church is our great weapon in the struggle for the preservation of our national life."

The decision of the German naval authorities to use turbine engines hereafter is remarkable, because up to this time their prejudice against turbines has been strong. A complete reversal of judgment has taken place, and it will be interesting to see if the German merchant fleet will now indulge in vessels thus propelled. Hitherto both the North German Lloyd and the Hamburg-American companies have stuck by the reciprocating engine. England alone has gone in for the turbines whole-souled. In this her procedure has been characteristic of the spirit of the Admiralty for some decades. Once convinced that an invention is valuable, it invests in the device with British thoroughness. This was true of the adoption of the torpedo boat and torpedo-boat destroyer. With the submarine the Admiralty delayed until France had a big start; but, once the conversion was effected, the building of submarines went on with astonishing rapidity. With the turbines England again took the lead, and it will be years before any other country has a turbine battleship like the Dreadnought. At Washington the authorities are inexcusably indifferent to submarines and torpedo work of all kinds, being blinded by the craze for monster battleships. And the turbine engine has few, if any, friends in the Navy Department—not any more than had the original Monitor, and other inventions.

Witte *redivivus* is bulking large nowadays against the flat background of a characterless bureaucratic ministry—so much so that the reactionaries are demanding his expulsion from the country. While Russia was still suffering from the violent after-effects of the dissolution of the Duma, Witte was ill at a German watering place. With the establishment of comparative calm in the empire, his tonsils are cured, and there is some rumor of his being considered for the post of Governor-General of Poland. Why Witte should have become the object of such universal detestation is both easy and hard to understand. The reactionaries hate him as the author of Constitutionalism, and, in fact, as the originator of that industrial policy which has been the principal factor in the upbuilding of a revolutionary workingmen's party. The Liberal elements were outraged by his attempt to mutilate popular representation on the eve of the meeting of the Duma. And he encountered the common fate of the trimmer in times of stress. Nevertheless, there is no denying that as an opportunist he has displayed remarkable skill, and he is still the only person in Russia that has accomplished anything definite and big. It is not impossible that with time remembrance of his rather devious policy with regard to the Duma will fade, while the liberties he has been instrumental in gaining will plead for him when these liberties are in danger of submersion.

Pope Pius has approved a Diocesan Association organized by the Cardinal-Archbishop of Bordeaux, and it is announced that the French Government will regard this body as a "cult association" under the Separation Act. If so, the way is open to reconciliation and to putting an end to the present unseemly squabbling over the inventory of church possessions. As in many cases involving personal dignity, the compromise has a comic aspect. Archbishop Lecot undoubtedly reports to Pius X. that the Diocesan Association is organized under the old law, and in flat defiance of the impious Separation Act. Minister Briand, on the other hand, reports to M. Clemenceau that a cult association has been formed under the Separation Act. Moreover, the Diocesan Association which the Vatican accepts seems to be, but for the name, the *association fabricienne* which, though recommended by the French episcopate, was summarily rejected by the Vatican. In fine, the quarrel has very largely had to do with names. It has been so serious, however, that one must heartily welcome an agreement if merely on the basis that the State is to say tweedledum contentedly, while the Church persistently intones tweedledee.

SECRETARY ROOT ON SOUTH AMERICAN TRADE.

Secretary Root's second speech at Kansas City dropped from diplomacy into trade, as was natural in an address to a Commercial Congress. Doubtless, many members looked upon his recent South American trip as that of a glorified drummer, and expected a report from him accordingly. They did not get that, but they did get a discussion of the whole question of our trade relations with the republics to the south of us, marked by the breadth of view which characterizes most of the Secretary's public utterances. We say this, though from some of his conclusions at Kansas City we strongly dissent.

His argument was for subsidizing steamship lines to South America, but he first stated some of the antecedent obstacles to our developing a large South American trade, and did it with a fairness seldom met with in the speeches of subsidy-advocates. Mr. Root frankly admitted that American manufacturers and exporters have gone about the business of catering to the South American market in a blundering and back-handed fashion. They have not been willing to suit their goods to the customer's demand. They have taken no pains to get agents who speak his language or know his ways. They have not been ready to adapt themselves to his usual system of credits; they have established no banking facilities of their own; have not thought of investments as far-reaching and designed to secure slow though increasing returns in enlarged trade, but have wanted huge profits at once, or have turned away in disgust; they have had, finally, nothing but contempt for the men whom they expect to buy their wares. All this Mr. Root admits. It is, indeed, an old story. The very consular reports have for years been filled with it. The Secretary thinks that, in time, we Americans will learn to "do our business abroad as we have done it at home, with force and energy," but concedes that, as respects South America at least, we have not yet learned how.

The truth is, and it is a fair inference from Secretary Root's admissions, that what we have to deal with in this matter is a state of mind, more than a state of trade. American policy has too long and too successfully discouraged attention to foreign commerce. The habit of disregarding it has at last become ingrained. When the amiable Dingley, framer of the fiscal law under which we live, could express the wish that the oceans surrounding us were of fire, so that no ships could cross, how can the average American be expected to give intelligent attention to trade beyond the seas? In fact, he has not done so. The chief reason why we have not done better in South American trade

is that we have not thought it worth bothering about. All our energies and plans have been concentrated upon developing our own vast territory—the greatest area in the world over which absolute free trade prevails. Upon that we have been taught to fix our eyes exclusively; while bidden by all that is patriotic to keep foreigners off it, and to have as little to do with them as possible.

Such an inveterate attitude cannot be changed in a day, though influences are, it is true, at work to change it. We are accumulating capital. We are multiplying our power of production, at the same time that we are reaching the limit of our own lands available for settlement. When the crest of our present wave of prosperity is passed, with its unprecedented demand at home, we shall undoubtedly be driven, by necessity, to turn our minds to the cultivation of the foreign field. The main thing is to get American business men and investors seriously to bend their faculties to the subject. When they do, and the preliminary mental difficulty is overcome, we shall not hear so much of the invincible obstacle in the lack of mere ships.

On the question of ship-subsidies itself, Mr. Root did not appear to have informed himself with his customary care. He says, for example, that Germany has abandoned the policy of free ships. Since when? Within the year, one great German liner was turned out of an English shipyard. Mr. Root also refers to the tariff provision allowing substantially free importation of ship-building materials. If he had read the testimony in the Senate Committee report, he would have found that, in practice, this law is entirely illusory. Yet the Secretary is wholly frank in granting that the protective policy has been disastrous to our shipping interests. He even defends a subsidy as but due "compensation for injuries inflicted upon American shipping by American laws." It might occur to others first to remove those injuries. But that is not the way of the Socialist legislator, known as a protectionist. Having taken the taxpayers' money to give one industry an unfair advantage, his remedy is, not to undo that wrong, but to commit another by giving any one who complains (if he has political power enough) a share of the pickings.

Mr. Root speaks only of a ship-subsidy for the South American trade. But does he imagine that the Ship Trust will allow money to be voted for that, without insisting that it be given ten times as much? On that point the Secretary might have consulted the pending bill to advantage. And as for his idea that a subsidized South American line would instantly create business, has he forgotten the old scandals of the Pacific Mail subsidy, and the complete failure of the

subsidized steamers to Brazil to promote any business except that of the lobbyist and Congressional corruptionist?

A "PROGRESSIVE" PARADISE.

In the recent borough elections in London, something like a political revolution occurred. The "Progressives," who for some years had been carrying everything before them, were unexpectedly routed. Control of borough after borough was won by the "Moderates"; and it is confidently predicted that this result foreshadows a similar defeat for the Progressives in the coming elections to the London County Council. The Progressives are, of course, the advanced municipal experimenters, of socialistic leanings, in close alliance with the Labor Party and affiliated generally with the Liberals; the Moderates act with the Conservatives. Thus this upset in the boroughs may have important political consequences of a national sort. Mr. Balfour has, in fact, hailed it as a sign of a speedy Conservative revival; the wisest Liberals do not deny its significance.

Now, what was the cause of this marked change of heart in London voters? Tax-bills. The management of the affairs of the boroughs was becoming fearfully extravagant. Lavish borrowing was the order of the day, to keep up with the costly application of socialistic theories. The rates were going up, and were bound to go much higher, unless a halt was called; and the rate-payers did, in the election, imperatively call a halt. In several of the boroughs there were also scandals, the exposure of which had something to do with the revulsion against the Progressives. On the demand of aggrieved rate-payers, an official inquiry was made into the administration of the Poor Law in Poplar. This is a metropolitan union signalized by Charles Booth ten years ago as the least pauperized of the ten which he grouped as "specially devoted to manufacture and trade." To-day, as the investigation showed, it is the most pauperized; while it has incurred so great a debt that there is now no sufficient security for further loans.

How this unhappy change was brought about, is shown in detail by the report of the chief inspector of the Local Government Board, J. S. Davy. It has just been issued as a Blue Book. The story is a depressing one of bad management, careless waste, and use of the public funds in a way to extend the very evils to be checked. This condition of affairs is the more significant in that William Crooks, the well-known Labor member of Parliament, was one of the Poplar guardians. Thus it was under the most Progressive auspices that the paupers have increased fourfold, while the rates have jumped up almost as

ominously. Early in 1904, the relieving officers had orders to grant outdoor relief to all applicants without insisting upon a labor test. The result was that the weekly cost rose from \$450 to \$1,500, though Inspector Davy reports that "there is good ground for thinking that the high figures of relief were artificial, and in no way represented the real need."

Many cases of flagrant abuse were unearthed. A typical instance is that of a certain Mrs. Carey, one of a deputation of unemployed women whom Premier Balfour received a year ago. She asserted that her husband was a dock laborer, seldom employed more than two days a week. They had six small children; and Mrs. Carey declared: "If something is not done, we shall have to eat one another, or else there will be bloodshed." Relief was given to this family by the guardians without investigation; but the official inquiry brought out the fact that Carey had earned \$14 during the week preceding his wife's call upon Mr. Balfour, and that his average weekly earnings during 1904 and 1905 were nearly \$10.

Management of the Poplar workhouse was so lax as practically to put a premium upon being a tramp. A generous dietary was provided—better, as Mr. Crooks admitted, than that of the self-supporting laborer. Tobacco and beer were freely supplied. This was against all rules, but the irregularity was got over by means of a medical certificate, saying that, in many cases, beer was necessary for reasons of health. However, when the medical examiner was called before the inspector, he testified that so much pressure was put upon him by the guardians that he could not refuse to give the certificate. But after the official inquiry, such certified beer almost ceased to exist. This may have been hard on the inmates, but it at least removed temptation from the guardians, some of whom had been seen on the workhouse premises drunk.

Poplar had also a farm-colony in Essex, where a hundred acres were procured and accommodation provided for 150 men. A summary of the report adds:

They had three meat meals a day, with allowances of tobacco; and, as a farm of that size cultivated by plough in the ordinary way would not occupy more than four or five men, only spade labor was employed, the land being dug over and over again to give some pretence of work, however useless. The discipline was very lax; the chief constable of Essex complained of the conduct of the inmates, many of whom had convictions against their names.

Naturally, the experiment proved a total failure.

Such a concrete experience as this teaches its own lessons, and asks its unanswerable questions. The hardest of these is, "Who will pay the bills of

Socialism?" That its cost will be great, is admitted by its more intelligent advocates. Ordinary taxes will not begin to cover it. Hence, as John Graham Brooks has pointed out in the November *Atlantic*, English Socialists are frankly going over to the plan of confiscatory taxes. They propose to take anywhere from 10 to 15 per cent. of the fortunes of the rich, who ought to be duly thankful that anything at all is left them. But an act of Parliament will first be necessary, and if the confiscators cannot even elect a borough council, how are they going to get a majority in the House of Commons?

THE FOOTBALL SEASON.

The football season just ending has been distinguished by a great improvement in the game from the point of view of both players and spectators. The new rules have been successful in "opening up" the play, in giving larger opportunity to the individual player, and in making it possible for those watching to follow the ball as in early days of American football. The forward pass and the onside kick have added an interest and necessitated a skill lacking of late years. Most important of all, brains are now at a premium, instead of brawn. The fat, unwieldy players of a year ago have given way to lighter and more active men. It is no longer a question of battering-ram line-plunges, with both teams piled upon the man with the ball, or of wearing out opponents by incessant attacks upon one or two players. It takes head-work and strategy now to win, as was clearly proved at New Haven on Saturday. There the Harvard team, perfect in its line defence and superior in the old-fashioned football and in kicking, was easily defeated by the daring and the excellent tactics of the Yale eleven—wonderfully trained in the new rules by the master-coach, Walter Camp.

More than that, the spirit of the players has somewhat improved; they have behaved this year slightly more like gentlemen. This advance is not due to the extra official provided by the new rules, because in most games both captains have declined to avail themselves of the added umpire, a bad example which Harvard and Yale did not follow on Saturday. There is such need of this extra umpire that his presence should be made compulsory, if only to enforce the new and complicated rules. On every one of the large college teams, this year, save Cornell's, one or more men have been disqualified for foul play, which in past years would have been overlooked. Nevertheless, we must admit that this season, at least, there have been reported no flagrant cases of biting, gouging, or maiming. But, as F. S. Bangs of Columbia has pointed out, there is still room for improvement.

So far as accidents go, according to the Chicago *Tribune's* figures, the death roll has been decreased to eleven, while the serious injuries have fallen from 159 to 104. It is, of course, impossible to say whether the total number of players this year was greater or less, but probably the proportion of serious injuries has been smaller. It seems to be established, too, that the elimination of mass-play has decreased the risk of accidents to schoolboys, among whom still occur most of the deaths. That the danger of accident will disappear so long as men must come into violent personal contact is not to be expected. A bad fall while running in a broken field may be quite as disastrous as being doubled up under ten or fifteen excited players. But the hazard has been slightly reduced.

The general objections to football remain unchanged. President Eliot has noted that the game has been bettered; but he welcomed the opportunity afforded by the recent dinner to the Harvard crew to declare again for athletics of which the rules do not have to be changed from year to year. Lawn tennis and rowing are, in his opinion, the only sports fit for intercollegiate contests. He is, moreover, reported this week as saying that it would do Harvard "no harm to break off athletic relations with Yale, or even with every other university"—a sentiment in which we most heartily concur. To our minds, Columbia has lost nothing and gained much by her abolition of intercollegiate football, and we trust that her governing bodies will not allow themselves to be influenced by the clamor of the undergraduates for the restoration of the combats.

Changes in rules, more umpires, stronger insistence upon bona-fide students as players, are all well enough. Yet they do not touch the real vice of intercollegiate matches—the utter absorption of the undergraduates, the spectacular character of the struggles, the huge money stake, the newspaper notoriety—in short, the total disproportion of athletics to studies in the college world. Faculties and athletic committees have meekly submitted to the domination of the athletes; the scandals about professionalism, about hired outsiders, and financial mismanagement, are all too well known to bear repetition here. These evils must be grappled with and eradicated, for they are clear evidence that the great intercollegiate contests no longer serve the purpose for which they were intended—the stimulating of the mass of undergraduates to beneficial exercise.

TASTE VS. RULE IN ENGLISH.

The formal rule of grammar has lost much of its authority as an arbiter of English expression. Little of positive

law is left in the linguistic Israel, and each may use without serious let or hindrance whatever form of speech is right in his own eyes. It is not the man who defies the grammarian that is put on the defensive to-day, but rather the one who is over-conspicuous in observing his dictates. Theoretically, formal grammar should be merely the succinct statement of the facts of good usage. Practically, the limits of good usage are always too vague to admit of succinct statement with any approach to scientific accuracy. The difficulties in the way of a scientifically unassailable code of "good English" are insurmountable, even for a single brief period, to say nothing of the fact that the best usage of one decade may differ in scores of particulars from that of the next. The downfall of the Harveys and Pinneos of our childhood, therefore, is due not simply to their many mistakes in points where accuracy was readily attainable. The most carefully elaborated code of rules based upon the usage of a former generation could not be rigidly fitted to the best English of the present.

The growing appreciation of this plasticity, even among the most highly cultivated and careful writers and speakers, makes it unlikely that the credit of rules of grammar as such will ever be fully restored, even with scholarly and unceasing revision. Only a few of the most fundamental and persistent facts of expression will be left to the dogmatic method. For all beyond that the dependence will be upon the cultivation of taste rather than the memorizing of rules. Unfortunately, however, mere emancipation from cramping rules does not implant the germs of good taste. A newly realized freedom may tempt to license in language as readily as in anything else. The readiness with which even educated people fall into slang proves that the current lack of respect for the rules of linguists has passed with many to the point of disrespect for language itself. Quintilian's pious declaration of reverence for speech as that gift of the gods which most sharply distinguishes man from the lower animals would seem strained to-day; but as compared with the opposite extreme there can be no question which attitude is likely to make language of the greater service.

The fundamental position of critics like Professor Lounsbury, who have been brushing away the ill-supported claims of the grammars and dictionaries to final authority, has been widely misunderstood. In showing that the split infinitive, for instance, has been used sporadically by good English writers for centuries past, Professor Lounsbury has neither proved nor intended to prove that good English usage demands the uniform insertion into the infinitive of all that it can be made to hold. His warfare is against the habit of dogmatic

assertion that no good writer would use such or such an expression, when the archives of literature show that various writers of incontestably good standing *have* done so. But while he is not to blame for the blithe readiness of his fellow-citizens to overdraw their account at the bank of logic, the fact of this readiness perhaps puts the responsibility upon men like him, teachers of English possessed of national reputation and influence, to do positive work upon the ground which has so effectively been cleared of the jerry-built grammatical structures of the past. To many, Professor Lounsbury has seemed to prove that all things are *lawful*; may we not look to him now for some positive aid to bewildered teachers and pupils in our schools in determining what is or is not *expedient*? Lowell once defined the ideal of Harvard as the development in her students of "that good taste which is the conscience of the mind, and that conscience which is the good taste of the soul." Something akin to this is wanted in the special realm of language, if the passing of the grammatical catalogue is not to be signal for linguistic anarchy.

Only the exceptional child is born into a circle where, because of the absence of anything but good models to imitate, it learns no habits of speech but the best. The great majority must acquaint themselves with good English, if at all, against the influence of daily surroundings, and chiefly by the study of written models. But the study of models, unfortunately, is a deceptive process. It is not alone the Browning or Whitman enthusiast who will mistake a characteristic blemish for a peculiar mark of virtue; and blemishes, as the Roman rhetorician noticed centuries ago, are much easier to imitate than virtues. Then, too, even in its most perfect achievement, a mere superficial imitation is so evidently undesirable that willingness to attempt it is a pretty plain evidence of mental weakness. The study of models for the cultivation of style can be a safe reliance only as the student learns to see through the surface to underlying principles, and then to apply those principles with a strict regard to difference of subject and circumstance. As a guide to that kind of study, there is room for a critical analysis of representative authors somewhere between the broad sweep of such essays as Lowell's appreciation of Milton or Spenser, and the inadequate and pedantic treatment found in the typical school or college text-book. If the chief agents in the final removal of the false guide-boards of the past will but blaze a possible path to good English in this direction, they will win the gratitude of many who find themselves for the present decidedly bewildered by the loss of the old and faulty authorities.

THE BOOKS OF A POET AND BIBLIOGRAPHER.

The library of the late Richard Garnett, Keeper of the Printed Books of the British Museum, is soon to be put up at auction in London. The catalogue is of no slight interest to bibliophiles, representing as it does the personal preferences and accumulations of a trained bibliographer, who was also a poet and a critic. Garnett was a man who knew both the outsides and insides of books as few men of our time. His long service at the British Museum gave him an intimate knowledge of the book market, and the best facilities both for purchase and collation. It is curious, then, to note that he was personally very little of a bibliophile, being apparently, with all his love of books, devoid of any insatiable desire of personal possession. Rarities bought as such were exceptional on his shelves. As he was a poet and the friend of poets, presentation copies came naturally his way. One finds, for example, gifts ranging all the way from Coventry Patmore to William Watson. In fact, such records of friendship give color to the whole collection. But it is strange to note that so famous a specialist on books possessed, for example, practically no incunabula, and only such early printed books—few at that—as served his historical studies.

A sound psychological reason for this void may be found in his daily routine. Clearly, early printing and quaint title-pages could make little appeal to the mere curiosity of one behind the scenes in the British Museum. It seems as if abundance of knowledge had chastened any collector's covetousness he may have been born with. For a Garnett, the quais of Paris and the back streets of Florence could have afforded few surprises. He could presumably hardly remember a time when he first thrilled at the sight of old stamped pigskin, or an illegible scrap of manuscript bound into a sixteenth-century tome. All these things were from youth a part of his work, and he seems to have purged himself of the gnawing desire that masters your true amateur.

On the other hand, there came easily to him treasures for which many of us put our bank accounts and consciences in pawn. A grandson of Coleridge gave him the annotated Ariosto of "S. T. C." Shelley's son gave him three manuscript notebooks of the poet, containing, besides the "Ode to the West Wind," unpublished memoranda for "Adonais," "The Cenci," and "Charles I." It was a rather poor return for this courtesy that Garnett made in later years by unearthing and republishing one of Shelley's well-forgotten juvenile romances. But it was ever difficult to keep the cult of Shelley in the grooves of common sense. Garnett was no more a victim of excessive piety than many an-

other worshipper at this flickering shrine. It is to his credit, however, that he used a greater discretion with regard to the Shelley notebooks, which remain in great part undivulged—properly so, we presume. Curiously enough, for so convinced a Shelleyan, Garnett had never been foresighted enough to secure the contemporary first editions of his idol, although his collection of biographical material was extensive. Again, ready access to the *penetrabilia* of the British Museum explains much.

Beyond a small group of pamphlets and books relating to the British Museum and to Dante, the library differs from that of the average scholarly gentleman chiefly in those presentation copies that we have already mentioned. Thomas Hardy, Richard Jefferies, and George Meredith are the brightest names in this list, though few of the younger British writers failed, at one time or another, to pay some tribute of respect to their learned colleague. Inscribed copies from foreign writers and scholars are surprisingly rare, for the keeper's duties brought him little in contact with readers at the Museum. Those who have had occasion to consult him by letter can testify to his unflinching courtesy and serviceableness.

As befitted a high official at a venerable library, his sympathy with what are called the newer movements appears to have been defective. To him, probably, the *nouveau jeu* was represented by the writers for the *Germ*, of which bibliographical treasure he had an original copy. It is a little surprising, then, to find that his file of the *Yellow Book* is complete; but this is due possibly to the fact that he was a contributor, having been chosen, apparently, to ballast with his name and erudition that decidedly whimsical enterprise. In general, Garnett's concession to modernity seems to have been the minimum practicable for a titular critic. This appears in a singular omission in his scanty collection of Americana. It is probable that no other British critic of equal repute would fail to have a copy of Walt Whitman. But to the "Good Gray Poet" and the tedious literature surrounding him, Garnett appears to have been blessedly oblivious.

Upon American literature, indeed, Garnett seems to have had the old-time notions. Like many Englishmen of liberal stamp, he was an Emersonian, possessing two sets of the works; otherwise his American library consisted largely of Edmund Clarence Stedman's "American Anthology" and an edition of Poe, the gift of Prof. George E. Woodberry, one of the editors. Hawthorne is unrepresented, and Lowell also. But Garnett was interested in that undervalued American writer, Herman Melville, owning not only a copy of "The Whale" ("Moby Dick"), but also the two volumes of the remarkable, if un-

read, religious poem. "Clarel: a Pilgrimage to the Holy Land."

Such an excursion in these rewarding but little known fields suggests that Garnett never fully lost the adventurous spirit that makes a good reader. It is clear that he never really regarded himself as a collector. There have unquestionably been great librarians who were also great collectors, but in general it seems that the ideal bibliographer must cultivate a disinterestedness alien to the apparently kindred pursuit of bibliopolism.

CONFERENCE ON SECONDARY EDUCATION IN THE SOUTH.

CHARLOTTESVILLE, Va., November 24.

On Friday and Saturday there met at the University of Virginia the State university presidents, the State superintendents of public instruction, and the university professors of secondary education from Virginia, North Carolina, South Carolina, Georgia, Alabama, and Tennessee. Among other guests were the United States Commissioner of Education, secretary of the General Education Board of New York, president of the University of Texas, presidents of the Virginia colleges, five State examiners of Virginia, Dr. S. A. Knapp of Louisiana, D. J. Crosby of the United States Department of Agriculture, and Professor Lockhead of MacDonald College, Canada. The object of this meeting was to consider the present condition of public high schools in the six States above mentioned, to plan a coöperative campaign for the establishment and development of more public high schools, to draw up bills on the subject for legislative enactment, and to work out the general principles of organization, supervision, and support. It was peculiarly fitting that a gathering of this kind should be held at the university founded by Thomas Jefferson as the capstone of the public school system, including free high schools within the reach of every child. This complete system of public education has not yet been realized in Virginia or in the South, though the Western States have carried out Jefferson's ideals with remarkable success. The present high school movement in the South is intended to give to this section similar school advantages to those now enjoyed elsewhere.

The conference was the direct outcome of the General Education Board's interest in Southern educational progress. This board is contributing to six universities the salaries and expenses of the professors of secondary education, who are the leaders in the high school campaign. For the last year these men have been studying the situation in their respective States, have been organizing high schools at "strategic points," and have directed the educational enthusiasm of officials, teachers, and citizens, to this particular need. The monthly report of each professor has been manifolded at the board's office in New York, and sent to the other professors in order that the experience of each may aid the work of all. After a year of such beginnings, this conference was called in order to systematize

results, and to decide on definite plans for the future.

The sessions were not public, and the discussions were free and informal. Each general topic was first presented in one or two papers, and then considered by the conference as a whole. The morning of Friday was spent on the question, "In what definite ways may the State Department of Education further the establishment and development of a system of public high schools?" The State superintendents outlined conditions in their respective States, and suggested plans for improving these conditions. It was evident that the laws and traditions of the different States are too diverse to allow uniform plans. There are variations in the method of levying taxes for schools—by county court or county commissioners, by direct vote of the people, etc.; there are variations in the minimum and maximum of school tax permitted by law; there are variations in local school units—district, township, or county; there are variations in the authority of local and State school boards. Some of the six States already have high school laws; others have none. Some allow high schools to be supported out of the general school fund; others require special taxation. In spite of these differences, the discussions resulted in establishing several principles of importance: the necessity of State supervision of high schools, the value of State appropriations to promote local self-help, the emphasis to be put upon both county (or township) and district support, the need of opening high schools in towns and villages to children of the rural communities, the advisability of starting with three grades of high schools, etc.

The afternoon was devoted to the relations of the State university and the professors of secondary education to the public high schools. The professors reported on the work so far done by them, and plans were made for further advance. In the evening a reception was given to the members of the conference by the faculty and students of the University of Virginia.

Saturday morning was devoted to agriculture in the high school, papers being read by Dr. Knapp and Mr. Crosby, and discussed by Professor Lockhead. It was the opinion of the Conference that a creditable course in agriculture, suited to local conditions, should be a part of the curriculum of every rural high school. At present there are in Alabama nine district agricultural high schools, supported by the State. The last Georgia Legislature appropriated to eleven district agriculture high schools, to be located at accessible points, certain fees that will give each district about \$6,000 a year.

The amount and methods of science teaching in the high school were taken up in the afternoon, there being some difference of opinion as to the place of natural science in such schools. Then followed the discussion of the agencies and methods of training teachers for the public high schools in the South. The present meagre opportunities for preparing these teachers were outlined and means suggested for meeting present needs. The evening was spent in an informal talk about various matters brought up in former sessions.

The present conditions of public high schools in these six States are on the whole

encouraging; and the large number of private high schools has greatly aided in supplying past and present deficiencies. Through a \$50,000 legislative appropriation of last March, the Virginia State Board of Education has organized one hundred and forty-nine new public high schools. The University of Georgia has so used its accrediting system as to develop fairly good high schools in most of the towns of the State. Tennessee is rapidly organizing county high schools at convenient centres, open to all the children in the county. North Carolina, South Carolina, and Alabama are not so well advanced in regard to high-schools, attention having been concentrated on the building up of an efficient system of elementary schools. Of course, the cities throughout the South have for years had public high schools of various grades of efficiency. The present movement is not for them, except indirectly; it is for the small towns in the rural districts, thus equalizing the advantages in the different sections of the State. The next five years in the South will witness such a growth of elementary and secondary education, as will affect every phase of Southern life and achievement.

Correspondence.

THE CASE OF THE TWENTY-FIFTH INFANTRY.

TO THE EDITOR OF THE NATION:

SIR: Whatever the provocation, and confessedly it was the moral one of antipathy, not a physical imposition, shots were fired from the gallery of one of the barracks in Fort Brown into a neighboring dwelling beyond the wall, and almost simultaneously other shots were fired into the town from the vicinity of two other occupied barracks. Immediately, and as if by prearrangement, an armed party, variously estimated at from ten to fifteen, scaled the wall and began to fire into the houses of near-by residents. There certainly was no present provocation of any sort. One man was killed and one wounded within a building; a police officer who had no arms in his hands was gravely wounded in the street, and his horse was killed; and very many shots were fired with intention into houses where women and children were sleeping and men and women were sitting quietly. It is clear that unprovoked murderous assaults with firearms were made by the concerted action of a number of soldiers acting in direct defiance of military regulations and in violation of civil law.

As a military offence, it was not only subversive of all discipline, but closely approached mutiny in spirit if not technically. Why were not these men at once apprehended? Besides the general oversight of a company exercised by its first sergeant, a non-commissioned officer is always in charge of each barrack, whose particular duty it is to preserve order and to see that the public property is not misused. The arms are always kept in locked gun-racks, and ammunition is in the bands of the men only when specially served. The stain of firing may readily be removed where there are facilities, but

a dozen or more rifles cannot be cleaned in the middle of the night without attracting attention, any more than they could be surreptitiously removed without observation.

Officers might readily fall to anticipate such an outbreak from troops whose previous record had been good, and who had been stationed there less than a fortnight. Whether after its occurrence the officers did or did not at once do what they should to discover the guilty, is beside the present question. That question is: What is possible to be done, when discipline is so far subverted that an entire battalion, known to contain such lawless and dangerous men, substitutes for the manifest requirements of justice its own code for the concealment and protection of the guilty? It is morally certain that each company contained rioters whom non-participants could, if they would, pick out. It is preposterous to suppose that those non-commissioned officers, or the most of the privates, would hesitate to denounce cowardice in action, or, if possible, to apprehend a deserter going over to the enemy. To class the obduracy that refused in any way to assist the three successive inspectors with the code that restrains a boy from "peaching" upon a schoolmate who transgresses a master's regulation, is more than illogical; it is wicked. That the receiver is as bad as the thief is no more true than that an accomplice after the fact is fairly *particeps criminis*. Discharge without honor, clearly within the President's authority, is mild punishment for men so lost to military pride. They sacrifice nothing but the privilege of wearing the uniform they have disgraced. A false loyalty of comradeship has made them disloyal to the military service, and through it to the nation, and has generated a conspiracy of criminal silence that in anticipation would have been thought incredible.

ALFRED A. WOODHULL.

Princeton, N. J., November 23.

[The word "peaching," in so far as it suggests a minor offence, was unhappily chosen. We have no desire to minimize the crimes of the riotous negro soldiers. No one can denounce their lawlessness in terms too severe for our amen. The point which we wish to emphasize is that in the present condition of sentiment, in the army and out, regarding informers of all kinds, the refusal of the soldiers to tell who did the shooting is scarcely surprising, though it is none the less deplorable. We feel that under the circumstances a wholesale punishment by dishonorable discharge serves the ends neither of justice nor of discipline.—ED. NATION.]

THE HONOR SYSTEM IN COLLEGE AND OUT.

TO THE EDITOR OF THE NATION:

SIR: President Hyde's letter in the *Nation* of November 15 touches the core of a matter where cause and effect are persistently confused. Whether in college or out of it, the recognition, even implicitly, of the possibility of a double standard of honor is an ethical blunder. The so-called

"honor system," as *sometimes* understood, proceeds upon a supposition that the laws of organized society exist not to protect the honest man, but to terrorize him into good behavior. It harks back to the law of the jungle, where each beast takes what he can. There is no more a divergence of interests between faculty and students than there is between the judges on the Supreme Bench and any law-abiding citizen. It is just as much to the interest of one as the other in each case that a malefactor—whether the forger of a cheque or the would-be thief of a B.A. degree—be promptly detected and punished.

As one who has had only a limited chance, and that some time ago, to observe the workings of the "honor system" in examinations, I am willing to defer to those who have had more experience. If a system is ethically sound and also the most practicable, it is to be welcomed. But first of all, we must clear the atmosphere of the befogging fallacy that students may be expected to cheat if watched. An honest man, we repeat, has no quarrel with either policeman or judge, with proctor or professor. Why should he have? We must also indignantly reject the plan, sometimes introduced, that the instructors, having turned such matters over to others, must be oblivious to fraud. No one can shift his responsibility altogether. All are guardians of the law. It is a question of manhood suffrage. Personally, I believe that maturer minds are best fitted to weigh evidence. A jury of students might, perhaps, impose the penalty.

But what concerns us primarily is not the particular system adopted, but the attitude assumed by all concerned, and Mr. Hyde has done a public service in making this general attitude clear. One might wish, however, that he had stated one point in different language. By way of showing that honor is not a thing to be confined to examinations he urges that the students in Southern colleges should cease to "look lightly" on "sexual offences" which leave on character more lasting scars than "cheating in examinations." Whether or no Southern students are essentially worse in this respect than Northern students I will leave to the impartial statistician, but this chiasmic contrast of sins will, I fear, distract the attention of some readers from the main thesis. What one should emphasize is that, while immorality of the one sort undermines a man's fitness for society, the habit of "cribbing" in examinations would logically be fit training for the defaulter.

Many of the protests of "Protestantism" were based upon sound reason, and the protest against legal oaths made by the Quakers is germane to this discussion as asserting that a man's word is too sacred to be nullified by a child's reservation of "over the left" or to be reinforced by an oath on the Bible. For college haziness in regard to moral standards the students have not always been solely to blame. In a certain college catalogue, from the years 1891-2 to 1896-7, used to occur a formula administered to entering undergraduates, beginning: "We, the undersigned, do individually for ourselves promise, without any mental reservation, that" . . . and closing: "We also declare that we regard ourselves bound to keep this promise and on no account what-

ever to violate it." This surprising recognition of a succession of mental reservations has been for some years, I believe, discarded by the institution in question. Unfortunately, there still survives, even among some members of our college faculties, the notion that the ordinary criminal law ceases to be applicable to the student during the four years of his college life. This survival of an ancient privilege is now a mischievous anachronism. College students claim the privileges of independent living; they must accept its responsibilities.

FRANCIS G. ALLINSON.

Brown University, Providence, November 21.

TO THE EDITOR OF THE NATION:

SIR: President Hyde of Bowdoin understates the case, I think, when he says, in your issue of November 15, that the "honor system" is of long standing in "several Southern colleges." It is so, I think, in nearly all Southern colleges—at least in nearly (if not quite) all of the best repute. And he might have added—as I now do—that no college (North or South) has ever tried this system in good faith without satisfaction with the results.

I regret the phrase "honor system." There is no such "system." It is simply the honor principle. Its application to examinations is only one of its aspects, and by no means the most important. As I understand this "honor principle," it is, above all, the obligation to truthfulness and honesty—not in examinations only, but everywhere. Its test is the scorn of a lie, everywhere, as unmanly, cowardly, disgraceful. If I am at all right in this conception I cannot agree with President Hyde that this sentiment should "come to the surface" "only under such stirring experience as love or war." On the contrary, it should be everywhere present and potent, in the least as well as in the greatest things.

I sympathize with that Southern student who inquired in advance whether the examination was to be conducted on honor or not. If I am trusted, I am under the obligation of honor to be worthy of confidence. If I am under espionage or suspicion, I recognize no such obligation (beyond my own self-respect). If the principle means: "You crib if you can; I catch you if I can," I shudder to think of its influence upon character, not only during student life, but upon the standards of conduct and business in after years. Our colleges should at least set the highest ideals of conduct, even if imperfectly attainable. The honor system, I admit, is far from perfect in results, but it is at least an effort to recognize what is best.

I write this with the most profound respect for President Hyde, to whose example and to whose writings I have been accustomed to look for the highest ethical ideals. I am well aware that I have no authority to set against the weight of his name. But I have a long and wide experience, and, at the end of it all, in spite of all shortcomings, an unshaken faith in the essential honor and honesty of American youth, if they are treated honorably and trusted as gentlemen. I have seen this very confidence transform character. Let President Hyde try it at Bowdoin—for just one year—with faith, with patience, with forbearance. I venture to predict that he

would add his testimony to that of all others who have so tried it.

EDWARD S. JOYNES.

University of South Carolina, Columbia,
November 18.

ACQUIRING A TASTE FOR LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: Your articles on teaching literature in the schools confirm me in my feeling that to live with people who know the great writers of English is worth hours and volumes of set instruction.

Just here may I venture upon something personal? My father and mother were hard working people, with little time for anything but toil; yet, loving books, they made time to read them; and of their experience made an atmosphere of healthy interest for their children. In the North Church, of which Dr. Samuel Spring was pastor, there had been founded a library where the members of the parish had access to the works of Addison, Pope, and Locke, of Goldsmith and Johnson. These books were in a case in the vestry. For Sunday reading we owned a few volumes: Bunyan, "Paradise Lost," with some narrow religious memoirs. We learned much of the Bible by heart. Pierpont's Readers gave us lessons, extracts in prose and verse from some of the best writings, English and American. [Doubtless there was much in the earlier reading that was beyond us; but enough was made ours to become a priceless possession, and to prepare the way for fuller apprehension of, not less than the delight in, the literature of later years.]

I cite these facts, not as exceptional, but as instances of how workers for daily bread improved the small time at their command, and how greatly the sum of happiness was increased for themselves and their children. I have many similar cases in mind. There is a mistaken notion that the common people are debarred appreciation of our literature, except as it comes through school and college.

L.

Newburyport, Mass., November 15.

Notes.

The Oxford University Press has now ready a "Life of Frederick York Powell, with a Selection from his Letters and Occasional Writings," by Oliver Elton. With his friendships and enthusiasms and insatiable curiosity, Powell ought to afford material for an unusual biography.

The Sproul Company is issuing the "University Press Shakespeare" in forty volumes. Sidney Lee furnishes a General Introduction and notes, the latter at the foot of the pages. Various well-known writers contribute Introductions to the separate plays. The Cambridge text is used by arrangement with the Macmillan Company.

Longmans, Green & Co. are printing an adaptation, by P. A. Barnett, of Goffeaux's "De Robinsone Crusoe," which is nothing less than a Latin version of our well-known Robinson. The new edition is adapted for young readers.

Two volumes of the "Thesaurus Linguae Latinae" have appeared, and the international committee in charge of the work

has arranged to issue the third volume under charge of the general editor, Dr. Lommatzsch of Munich. Dr. Alfred Giesecke, of the firm of G. B. Teubner, recently established a fund yielding five thousand marks a year in the interests of the work.

Prescott still continues to be read, which is praise that can be given to very few of the historians. Thomas Y. Crowell & Co. have brought out a library edition of his Complete Works, in twelve volumes, fully illustrated. It presents a readable page.

We have before us from the same publishers eighteen volumes of their thin-paper classics in flexible leather bindings. The poets—Burns, Keats, Longfellow, Tennyson, etc.—are compressed within a single volume each; other works, such as Boswell's "Johnson," Carlyle's "French Revolution," and Hugo's "Les Misérables," extend to sets of two volumes. The longest of these, "Les Misérables," is still in fair-sized type. There are photogravure frontispieces, and to many of the works specially prepared Introductions.

A striking poem by William Vaughn Moody, "The Death of Eve," is one of the features of the December *Century*. In form and substance, it is far removed from the smooth commonplaces of most magazine verse.

In "Lincoln the Lawyer" (The Century Co.) Frederick Trevor Hill gives us a good reason for welcoming his book, which is that "no one has heretofore attempted a summing up of the great President's legal career." Many accounts of Lincoln at the bar and many anecdotes about him are scattered through the pages of Herndon, Arnold, Holland, Lamon, and Nicolay, but this book is the first effort to make a careful estimate of his position and reputation as a lawyer, and to present the main features of his twenty-three years' practice in the Illinois courts. No layman—not to mention the lawyer—can fail to be interested by evidence so carefully sifted and a story so well told. Indeed, many parts of the book have almost the value of original documents, since the writer has gathered much material at first hand from Judge Weldon, James Ewing, Col. Peter Dey, and other witnesses. In some cases we wish for more detail. It seems a pity that the important speech delivered by Lincoln in the case of Hurd vs. Railroad Bridge Co., a full report of which was preserved by the late Representative Hitt, should not have been printed as one of the appendices. Again we may regret that only the last chapter of 17 pages is devoted to Lincoln's work as President, in which, as the author shows, his legal training was often of the greatest value. When these chapters first appeared in the *Century Magazine*, the illustrations were far better and more numerous than those of the present volume.

Sir Oliver Lodge's "School Teaching and School Reform" (London: Williams & Norgate) contains four lectures delivered to secondary teachers in training at the University of Birmingham. They discuss in a sketchy way the aims of the various subjects of the curriculum, and the methods of teaching those subjects. There are scattered pages on interest, attention, and other psychological topics. A portion of

one lecture is devoted to boarding-school problems—the fag system, the utilization of pupils' leisure, and the increase of teachers' salaries. Rambling, superficial, and trite, are adjectives which fairly characterize the work. Sir Oliver Lodge is entitled to much more than a respectful hearing in the field of physics, but these lectures illustrate once more the fallacy of inferring that because men are distinguished in a special branch of learning, their casual utterances on educational questions outside that field are particularly worthy of attention.

"The Art of Class Management and Discipline," by Joseph S. Taylor (A. S. Barnes & Co.), "is intended as a slight contribution to the art of class discipline. It is offered to that hapless young woman who is just beginning to teach." There is need of such a book, certainly, but the character of this contribution scarcely justifies its publication. In the main it consists of stale generalizations which are undoubtedly true, but which can scarcely aid a teacher who faces for the first time a live class and the concrete problems which it offers for her immediate solution. Chapter IV. on devices of class government is specific so far as it goes, and the same remark applies to scattered pages of other chapters. The remainder of the book is a dreary waste.

Americans of Welsh extraction cannot but feel interest in the forthcoming publication of the life and letters of Edward Lhuyd (1660-1709). Few Welshmen have been held in higher esteem, have done better service to their nation, or displayed greater intellectual brilliance and versatility. Sir Hans Sloane spoke of him as "the best naturalist in Europe," and he was no less distinguished in the realms of language and archaeology. What gives his work its special value is the fact that in many cases, *e. g.*, in Celtic philology, he made use of methods which are usually associated with modern research. We know that he trained and supported a band of Oxford undergraduates, and travelled with them in the United Kingdom and Brittany to collect materials for his books. Their hardly-won information—they were chased by robbers in Ireland, treated as conjurers in Wales, arrested as thieves in Cornwall—was embodied in his "Lythophylacii Britannici Ichnographia" (printed at the expense of Sir Isaac Newton and others) and his "Archæologia Britannica," as well as in the writings of Ray, Lister, Baxter, Nicholson, etc. The life and correspondence are to be brought out by Richard Ellis of Jesus College, of which foundation Lhuyd was also a member. The letters he wrote himself are to be followed by those which reached him from Oxford during his travels. These are particularly valuable, since to some extent they bridge over the gap which opens with the death of Antony Wood in 1695, and is not closed until 1705, when Hearne's diaries begin. In the course of the next few months a mural tablet is to be erected to his memory in the Welsh aisle of St. Michael's Church, Oxford, by the Edward Lhuyd Society.

"Les Druides et les Dieux Celtiques à formes d'animaux" (Paris: Honoré Champion) adds yet another to the series of chatty little volumes by H. D'Arbois de Jubainville. Among the most interesting

chapters is that which deals with the "gutuatri," the Gaulish priests, or flamens; literally, those who invoke the gods, (Compare the English "god," meaning "the invoked," and Gothic "gudja," the invoker, *i. e.*, the priest.) We hear of one of them in Hirtius's addition to Cæsar's Gallic Commentaries. M. De Jubainville, by the way, compares the gutuatri with Chryses, the Priest of Apollo, in the "Iliad," not, as might have been expected, with the Druids. A good deal of space is devoted to contrasting these latter with Pythagoras and his disciples. Unlike the Pythagoreans, the Druids believed that death was the middle point in a long life, and that their souls went to a land of bliss beyond the limits of ocean to vivify new bodies. This view comes nearer to that referred to by Hesiod, *circa* 700 B. C., and by the author of the "Odyssey." We need scarcely say that the book is crammed with learning; it is somewhat elementary in places, but generally speaking to the purpose. We recommend it to students of Celtic history and thought.

Paul V. Bacon furnishes a new edition of Heyse's "L'Arrabbiata" (Boston: Allyn & Bacon). That which distinguishes the book from other editions is an interesting introduction narrating a personal visit to Heyse at his home in Munich, when the author told, among other things, of a Swiss who had heard of Heyse's "Im Paradiese," and sent in his card, happy in the thought of meeting the author of "Paradise Lost"! The editor visited Sorrento and Capri to verify certain allusions in the story. One could wish, however, that the book were embellished with illustrations of the author and the scenes he describes—factors of greater value to the American student reaching out after foreign culture than is often realized.

The publishing house of the Viuda de Ch. Bouret, Paris and Mexico City, has just brought out two books which, though remotely separated in time, both deal with the development of a national spirit in Mexico. It is only in so far as this is in some degree true that the title of the first, "Los precusores de la independencia Mexicana en el siglo xvi.," is justified. The author, Luis Gonzalez Obregón, treats of the dissensions of Cortés and his followers with the Spanish crown and its agents, and of the movements later in the sixteenth century, wherein the conquerors and their sons displayed a tendency to resist authority, and even to throw off allegiance to Spain. Events of this sort up to 1568 alone are studied; and only the title itself connects these events with the Mexican wars of independence in the nineteenth century. It would be interesting to have traced out for us as to Mexico alone the tendencies toward separation which were notable in practically all the Spanish colonies almost from the first. In the other book the author, who remains anonymous, has made what he calls "an essay in historical psychology" under the title "Porfirio Diaz (September, 1830—September, 1865)," his aim being thus to reveal "the life of the people in its intimate phases as shown in the life of a man who is all transparent." Some apparently new data as to Diaz's birth and origin are brought out. This is, however, no adequate biography of Diaz even for his early life and military career

—indeed, no such biography may be expected during his lifetime. The real value of this work lies in its frequent reproductions of passages from what may be called Diaz's own memoirs of his boyhood and military career up to the end of the French intervention. These are the recollections of Diaz, as related by him in recent years to the late Matías Romero, who put them in order for private publication. Translations from them were furnished to an Englishwoman, who recently wrote a book on Diaz, and who used them as "hitherto unpublished" selections from the "diary" of the pacificator of Mexico. It was this use of them which seems to have inspired the idea of making them more generally available in Spanish, and the anonymous author has evidently full authorization for such use. It would be much more interesting and valuable to have the "Memoirs" in their entirety, as edited by Romero, and approved by Diaz; but we note as perhaps significant the statement of our author that only a few of the "initiated" have seen these memoirs, and that, "owing to certain defects beyond remedy, they may have to become entirely dead letter."

Number 8 in the series of "Unpublished or Very Rare Documents for the History of Mexico" is "Causa instruida contra el General Leonardo Marquez por graves delitos del orden militar" (Mexico City: Librería de la Vda. de Ch. Bouret). These are the documents in the trial of Gen. Marquez for insubordination, embargo of money designed for the general treasury, etc., under the reactionary government of Miramon in 1859. The trial was suspended in 1860 because the reactionists were in straits and needed the services of Marquez in the field. The suspension became definite with the fall of the government which instigated the trial, and Marquez figured again in the anti-Juarez ranks as a general of the Intervention and Maximilian's Empire; and escaped to Havana after having, in Maximilian's conception, betrayed him. These documents, apart from the matter of personal interest, contain material bearing on the so-called "Wars of the Reform."

Lady Jebb is preparing a life of the late Sir Richard Jebb, to be published before the end of next year. She will be grateful for the loan of letters written by Sir Richard, and she will return them as soon as they are copied. Her address is Springfield, Cambridge, England.

Léon Vanderkindere, well known as a politician and historian, died in Brussels this month, at the age of sixty-four. At one time he was a professor at the Brussels Free University. Among his best-known writings are "The Age of Artevelde," 1879, "Belgian History in the Middle Ages," 1890, and "The Territorial Formation of the Belgian Principality in the Middle Ages."

A monument to Calvin is to be erected in Geneva in 1909, the four hundredth anniversary of his birth. The money is being raised by an international committee, headed by Prof. Lucien Gautier of Lausanne.

From an article by Dr. Ernest Schultze in the *Societe Praxis* of Berlin, on "People's Libraries in German Villages," it appears that there has been a five-fold increase in the number of these libraries

during the last ten years. In 1895 there were less than one thousand; now there are between five and six thousand. Their distribution is very uneven throughout the empire. The kingdoms of Saxony and Württemberg and the provinces of Brandenburg and Schleswig-Holstein have the largest supply, while Bavaria, Alsace-Lorraine, and Mecklenburg have few. More significant even than the great increase in numbers, says Dr. Schultze, are the enlargement and improvement in quality.

The problem of a "learned proletariat," or a supply of university graduates far beyond the demands of the professions in Germany, a subject that perplexed Bismarck, is again under discussion. Dr. J. Courod, an authority on political economy in the University of Halle, has published an article on the subject in the latest issue of the "Jahrbücher für Nationalökonomie und Statistik." In analyzing the causes he declares that a sentimental pride in higher education as such, originating in the class distinctions of the Middle Ages, and the failure to appreciate the intellectual demands of the productive callings of modern life are largely responsible. As remedies he suggests that matriculation fees be materially increased; and that stipendia at the disposal of the universities be given only to students showing special qualification. In addition he urges that the consequences of overcrowding the professions be published far and wide.

NOTES FOR BIBLIOPHILES.

E. Gordon Duff's "Printers, Stationers, and Bookbinders of Westminster and London from 1476 to 1534," just published here by G. P. Putnam's Sons, is made up of two series of lectures delivered at the University of Cambridge, in 1899 and 1904. The author is the recognized living authority on earliest English printers and their books, and is of that comparatively new school of bibliographers of which the late Robert Proctor was the most prominent. The custom of the older writers was to describe a book, the title, the colophon, the number of leaves, the illustrations, etc., then to pass on to the next. William Blades with Caxton's work, and Proctor with that of the Continental printers, based studies on the comparison and classification of books by the types with which they were printed. It was also the way of Henry Bradshaw, who, as late as 1882, wrote to Francis Fry:

The only way to really find out about these things is to take all a man's books which he is known to have printed—or, at any rate, such as can be got at—and to study his habits of printing; not only his type and cuts, but also his habits of using these materials. . . . But I really do not know three people in Europe now living who study things in this way.

In these lectures the first half-century of book-making in England is covered. The Westminster printers, Caxton, Wynken de Worde, and Notary; the London printers, Pynson, Lettoun, and William de Machlinia; foreign printers and the books they made for the English market; the early English bookbinders—these are some of the subjects touched upon. The lectures are narrative in form, not technical, and are filled with interesting allusions and notes on old

printers and their ways, old books, and old bindings. They are in the nature of outlines of that larger work on the history and development of printing in England which is yet to be written.

The Society of Iconophiles has recently published a volume which will interest all collectors of prints relating to New York city. It is an Index to the illustrations in the famous series of New York City Common Council Manuals prepared by Davis T. Valentine, Clerk of the Council. The Index itself has been prepared by R. H. Lawrence, secretary of the Society. The Introduction (19 pages) is by William Loring Andrews, preëminently a lover of pictures of old New York. The first Manual, for 1841 and 1842, is a little volume of 185 pages measuring 4¾ by 3½ inches. It is the scarcest and most valuable of the series. The size of the volume was enlarged for the issue of 1844 and 1845, again in 1849; and finally in 1868, 1869, and 1870 the annual became a large octavo. The Index as here printed is divided into four sections: (1.) Plates and Maps; (2.) Maps and Plans of the City of New York and Vicinity; (3.) Miscellaneous Maps; (4.) Facsimiles, Letters, Signatures, Documents, Broadside, and Certificates. Following these lists, which give titles in full, is a general short title Index in a single alphabet to all illustrations. The volume is printed at the Gillis Press. The copies not taken by members of the Society are offered for sale by Charles Scribner's Sons.

Sidney Lee, chairman of the executive committee of the Trustees of Shakespeare's Birthplace, issues the announcement that the trustees have acquired perfect copies, in exceptionally fine condition, of quartos of "The Merchant of Venice," 1600, and "King Lear," 1608. For these the trustees paid a little more than one thousand pounds, and they now appeal for more generous public support in order to make the Shakespeare Birthplace Library "altogether worthy of its national character."

Three works printed by William Caxton have been discovered by Hodgson, the London auctioneer, in a private collection sent for sale from Whitley Beaumont, Yorkshire. The three volumes, all more or less damaged by the cutting away of blank margins or the abstraction of entire leaves, are "The Royal Book, or Book for a King," 1484, "The Book of Good Manners," 1487, and "The Doctrinal of Sapience," 1489. The first, according to the London *Athenæum*, contains only 100 out of 160 leaves, and only three of six woodcuts. The second book, of which there are but two perfect copies in England, contains sixty out of sixty-six leaves. "The Doctrinal of Sapience" has fifty out of ninety-two leaves.

Stan. V. Henkels will sell at the auction rooms of Davis & Harvey in Philadelphia, on Friday and Saturday of this week, the collection of portraits of officers in the army and navy in the War of the Revolution, of 1812, and the Mexican War, also views of land and naval battles, belonging to James T. Mitchell, Chief Justice of Pennsylvania. There are many contemporary portraits in mezzotint, and there is a notable collection of pictures of John Paul Jones.

The third portion of the library of Gov. Samuel W. Pennypacker, being his

books relating to the history of Pennsylvania and his collection of periodicals, will be sold by Mr. Henkels on December 5 and 6. The collection, containing, all told, 1,231 lots, is especially rich, so far as rarities are concerned, in German, Dutch, and Swedish books on Pennsylvania. Among these are books on New Sweden by Acrelius, Biorck, Campanius Holm, and Hesselius; among Dutch books are Vander Donck's "Beschryvinge van Nieuw Nederland," 1656 and Webb's "Nader Informatio en Bericht," 1686; and among the German books, Pastorius's "Beschreibung der zu allerletzt erfunden Provintz Pennsylvaniae," 1700; and a translation of Thomas's "Pennsylvania and West New Jersey," intended as a supplement to Pastorius, the title being "Continuatio der Beschreibung der Landschaft Pennsylvaniae," 1702. It is rather surprising that Gov. Pennypacker had so few of the early books of William Penn. He seems not to have owned Penn's first book on Pennsylvania, "Some Account of the Province of Pennsylvania," 1681, a copy of which was sold at the low price of \$210, in the Proud sale in 1903; he does, however, have the scarce "Further Account," 1685. Nor has he apparently Penn's "Letter," 1685, except in a Dutch translation, or the "Frame of the Government of the Province of Pennsylvania," 1691, both of which occurred in the Proud sale. The most valuable Pennsylvania book in the collection is no doubt the copy of the first printed Pennsylvania Laws, printed by Andrew Bradford, in 1714, of which no copy seems to have been sold at auction in this country during the last thirty years. Another great rarity, "Some Letters and an Abstract of Letters from Pennsylvania," 1691, is believed to be one of three copies known. The collection of periodicals includes some rare series of early American magazines.

The autograph collection of the late F. Griswold Tefft, together with that of the late William L. Bryant, will be sold by C. F. Libbie & Co. of Boston, on Monday, December 3. There are several letters of Washington, a short A.L.S. of Lincoln written from the Executive Mansion on June 10, 1861, to Capt. Dahlgren, about a new gun; a Bryant manuscript, the poem "The Strange Lady," three pages folio, besides several Bryant letters; letters of Hawthorne, Irving, Ruskin, Emerson, Longfellow; a number of Revolutionary documents, some of historical interest, from the papers of Major-General Edward Hand; etc. Some interesting broadsides, several relating to New Hampshire, are included in the sale.

The selection of books, broadsides, and autographs from the collection of James Terry of Hartford, to be sold by C. F. Libbie & Co., on December 6 and 7, includes some choice items, the most notable perhaps being a copy of the first edition of the Saybrook Platform, printed at New London in 1710 by Thomas Short. The autographs are largely from the correspondence of Gov. William Plumer of New Hampshire and Benjamin Trumbull, the historian. They include a number of letters of John Adams, John Quincy Adams, Silas Deane, Roger Sherman, William Williams, etc. Among the books and broadsides are several relating to Dartmouth College and its progenitor, the Indian Charity School of Eleazar Wheelock. Stephen

R. Bradley's "Vermont's Appeal to the Candid and Impartial World," 1780, a presentation copy with inscription by Ethan Allen is another choice item.

A FEW OF THE ILLUSTRATED BOOKS.

Court Beauties of Old Whitehall. Historiettes of the Restoration. By W. R. H. Trowbridge. Imported by Charles Scribner's Sons. New York. \$3.75 net.

It is interesting to observe how differently historians approach the question of moral judgments. Lord Acton, for one, considered that the biographer should show no mercy in denouncing the offences of a sinner who died five hundred years ago. "I exhort you," he once said to a distinguished audience, "never to debase the moral currency or to lower the standard of rectitude, but to try others by the final maxim that governs your own lives, and to suffer no man and no cause to escape the undying penalty which history has the power to inflict on wrong." Over against Lord Acton stands H. C. Lea, who points out that owing to the fluctuation of the moral standard one must take care how he applies his own ethical principles to men of other ages and other lands. In the volume before us Mr. Trowbridge also gives an opinion on this subject. "No people," he says, "are more ridiculous than the literary policemen who nab historical offenders and prosecute them at the bar of a remote posterity, unless it be the literary whitewashers who defend the same criminals at the same bar. Such convictions and acquittals of the dead are like a burlesque of justice which lacks the sense of humor."

When we say that the foregoing passage stands before a long and minute account of Barbara Villiers, Duchess of Cleveland, we give the reader some means of judging Mr. Trowbridge's attitude towards the sultanas who reigned at Whitehall after the Restoration. In each of them he sees a type, from the Countess of Shrewsbury, "the Messalina" of the period, to the Duchess of Richmond, its "Prude," and the Duchess of Portsmouth, its "Spy." Leaving praise or blame altogether aside, he sketches eight women who either supplied abundant gossip for the memoir writers or affected the course of English politics. Besides those already mentioned the list includes the Duchess de Mazarin, the Countess de Gramont, the Duchess of Tyrconnel, and the Duchess of Orleans.

The Court of the Restoration has been written about so often that one is entitled to exact from each new volume some special merit of treatment or learning. A book like Forneron's "Louise de Kéroual" has ample warrant on the score both of its erudition and its relation to important public issues. At the other extreme comes the volume which is made up from scraps of Gramont, Pepys, and St. Evremont, with a large supply of photogravures thrown in to catch the purchaser's eye. Mr. Trowbridge has not delved like Forneron, but he knows the diarists well and has a better grasp of English history at large than is possessed by most writers who sport with the beauties of the Restoration. As for the material, it is not easy to write a Sunday-school book on such a subject, and Mr. Trowbridge

makes no pretension to be a concealed moralist. So far as we can infer, he writes for an audience from which the young person has been eliminated, and he considers it his chief function to amuse. In three at least of his studies we think that *suppressio veri* could have been carried somewhat farther without creating an incorrect impression, but the general reader who takes up a book on the Restoration is bound to run his own risks.

It is not improbable that Mr. Trowbridge has hoped to give his volume a distinctive quality by lightness of touch. If this is the case, he has in a measure succeeded. We think, however, that he has not quite hit the strain when he writes:

La Belle Stuart! The glamour of the Restoration is in that romantic name. At the sound of it our thoughts at once rush back to childhood, when we learnt English history out of story books and picture books; and old, half-forgotten tales of the Merry Monarch, and the gay doings of cavaliers with periwigs and swords, of maids of honor all lace and perfume, crowd upon the memory. La Belle Stuart! to the very children of the Board Schools—if imagination be a faculty looked upon with favor at those practical seats of municipal learning—must come visions of a far-off romantic time.

This passage will do more than columns of comment to let the reader know how Mr. Trowbridge handles his subject.

Highways and Byways in Dorset. By Sir Frederick Treves. With illustrations by Joseph Pennell. New York: The Macmillan Co. \$2.

Few counties are richer in historical associations than Dorset, few have more variety of scenery and architecture. Her fine harbors of Poole and Weymouth invited the invader from the days of the marauding Saxons and Danes to the morning in June, 1685, when the effeminate Duke of Monmouth, the Pretender, landed at Lyme Regis for that campaign which was to end in the defeat at Sedgemoor. Charles II. after the battle of Worcester made his escape through Dorset, hid in its country houses, and finally embarked for France on a coal brig from Poole. His adventures and the humors of his escape in the disguise of a groom are here told with great spirit.

Everywhere are traces of Celtic and later Roman occupation, the pit-dwellings and earthworks of men who toiled with horn picks, and yet managed to erect great camps or cities of refuge like Maiden Castle, two miles south of Dorchester. These earthworks, Thomas Hardy has used in the setting of his village tragedies to give an impression of gloom and vast spaces. Maumbury Rings, introduced with so much effect in the "Mayor of Casterbridge," Hardy labelled a Roman amphitheatre. Sir Frederick follows the common tradition adopted by Hardy, and ignores the theories of modern archaeologists, who conjecture that the amphitheatre was built long before the coming of the Romans, and was a great temple of the sun. Dorset is also full of beautiful old manor houses that have been converted into farmhouses, of decaying roofs of thatch that are being replaced by hideous corrugated iron, and of churches painfully restored.

The guide to Wessex usually dwells too long and too often on the Wessex of Hardy. Sir Frederick is happily more

interested in British and Roman Dorset, and in the description of her scenery, often wild and desolate without grandeur, and then again wonderfully fertile, a country of lush grass and butter-making. Everywhere he succeeds in giving the reader a vivid picture of Dorset coloring; the "jade green" of the downs, whose long rolling lines are "like terrific sea-combers about to break upon a shoal," the rich yellow of the stone buildings which suffuses the church roofs and aisles with a golden radiance instead of the cold misty gray of less fortunate counties. Sir Frederick Treves, himself a native of Dorset, writes thus of Hardy's Edgdon Heath, commonly called the Great Heath:

The tone of the moor is a russet-brown, splashed by the bracken with green and by the heather with purple. Under the summer sun marvellous colors appear; . . . a faraway plateau may be Gobelins blue, and a near hillock bronze-brown. There may be here a bare slope of mushroom-colored sand, and there a reedy marsh of parrot green.

There are glorified guide-books, whose charm depends on their illustrations, for which the text is a mere thread. But with the present series this is never the case, and for that reason the volumes are the most attractive of their type. None that we have encountered has a style more pleasing than this description by the famous court physician. Mr. Pennell's drawings in pastel are as usual excellent, and are especially successful with the gloomier scenery.

Certain Delightful English Towns. By W. D. Howells. New York: Harper & Brothers. \$3.

There is no doubt that to see and enjoy England aright one must be an American. The country is, in the first place, peculiarly rich in small comforts that her people take for granted, not knowing their own bliss. The Frenchman or German, having his own notions of comfort, regards the English brand with a critical eye. He has his own cheap and satisfactory equivalent for neat-handed, soft-voiced servants, railway porters obsequious for twopence, and the afternoon tea that at certain hours seems to gush spontaneously all over England. Mr. Howells believes too that it will always be the American mind that "wherever it goes catches in some rhyme, some phrase, some story of fact or fable that makes the place more home to him than the house where he was born." The Englishman cannot be expected to recall Kingsley's Mary at the sight of Chester and the river Dee, because he is probably absorbed in making the history that is to thrill the New Zealand tourist centuries hence. To the literary reminiscences, quite as much as the creature comforts, Mr. Howells does full justice, and shows an intimacy with Saxon Kings and the early vicissitudes of the British which could never thrive in the English breast. Plymouth, Exeter, Bath, Bristol, Southampton, Oxford, and Chester were among the towns that he found delightful, and has enriched for the wiser sort of tourist, who should cultivate his exquisite tolerance, and resolve, when visiting those scenes, to enjoy even the hotels. Mr. Howells has a good word for nearly all of them; and they offer in general so lit-

tle and at such high prices that one can only feel how priceless to his travelling companions must have been this gift of quietly ignoring the unpleasant or inferior.

The book is illustrated, not strikingly, but sufficiently well. What will endear its pages to every reader is its unflinching humor, its nice balancing of the emotions and æsthetic impressions by one on whom no charm whether of setting or human association was thrown away.

Herbert W. Tompkins's "In Constable's Country" (E. P. Dutton & Co.) has a peculiar attraction not at all due to the text, since those who wish to read about East Anglia will find all they want related with better effect in Mr. Dutt's volume in the Highways and Byways Series. The publishers of the present volume have wisely expended their energies on the illustrations, which will charm every admirer of Constable. Here are reproduced in color sixteen of the most famous of Constable's paintings, half of these, including the "Haywain," dearest of all to most lovers of Constable, from the pictures in the National Gallery. All are, in fact, drawn from the London galleries, which have been not only fortunate in gifts from the heirs of Constable, but ready for the last twenty years to pay twice as many thousands for a Constable as he earned hundreds, though Constable was by no means without honor in his own day. Mr. Tompkins's share in the volume led him to wander through marshy Suffolk, which was Gainsborough's county as well as Constable's, and to describe the charms of its "lilled lowland waters," as they were called by Stevenson. Like Rembrandt, Constable was a miller's son, and Mr. Tompkins has collected here all the known facts of his life, first as a miller and then as a painter of a county that has much of the Teuton spirit in its scenery, so that though Constable directly influenced the French school, it is of the Dutch that one is constantly reminded in his coloring and composition. The text is, as we have said, by no means the main interest, but it is well enough as a setting to the pictures, which are excellent examples of color illustration.

John Addington Symonds's translation of the Life of Benvenuto Cellini is reissued by Brentano in two volumes that are a model of good bookmaking. The work was done by the Merrymount Press, and, barring a rather trivial title page and imperfect opacity of the paper, it is hard to see how it could be better. There are forty-one photogravure plates, representing Cellini's work or his patrons, associates, and enemies. All of Symonds's excellent introductory material is retained, and there is an index. Royal Cortissoz has contributed a preface in which he points out with sympathetic yet critical discernment the discrepancy between Cellini's personal forcefulness and artistic achievement. The essay is useful as a corrective to Symonds's, who was naturally obsessed by the sheer personality of his hero. This reprint is likely to remain for years the preferable library edition of these fascinating memoirs.

The palaces of France, in both their beauty and their historical associations, are capable of furnishing endless themes for artist and author. The latest volume of

this kind is "The Châteaux of Touraine" (The Century Co.), with text by Maria Hornor Lansdale and illustrations by Jules Guérin. The pale, flat colors used by M. Guérin bring out the romance of the country admirably—of his work no commendation is necessary. It seems almost a pity that photographic reproductions, with their hard lines and glaring lights, should have been interspersed, although some of these are excellent of their kind. The story of the châteaux is filled with the echoes of old romance, cruel and sweet by turns.

John Lane presents a very welcome reprint of Alexander Gilchrist's "The Life of William Blake," in a single volume, friendly both to the hand and eye. This reduction in bulk has been effected by the omission of long extracts from Blake's works, which are now readily accessible. There are more than fifty well executed reproductions, about half of which are drawings from the collection of the editor, W. Graham Robertson, and previously unpublished. Gilchrist's book leaves something to be desired in the article of criticism, but forty-three years after its issue, it remains the standard source for the facts of Blake's life. Without it, we should be largely reduced to surmise as to his personality, as we are, for example, in the case of that other great visionary, El Greco. This reprint is admirable from the point of view of the general reader, and, by reason of its illustrations, necessary also to the special student.

The proper record of Emma Hamilton must be pictorial. It was her beauty that conquered England's greatest admiral and that inspired one of England's greatest painters, and beauty calls for more subtle delineation than that of the printer. Mr. Baily has therefore done well in bringing together in his "Emma, Lady Hamilton" (F. A. Stokes Co.), a handsome quarto volume, some twenty or more reproductions of the most famous of her portraits. These are accompanied by a text, but as this is more of a setting for the pictures than an original contribution to history, it need not detain us. On the whole, the illustrations may be highly praised, though they vary a good deal in process and in quality. The selection made is altogether excellent; it includes all the best Romneys that are really of Lady Hamilton, and among the most beautiful will be found two or three that are far from familiar. Although the book is not an authoritative life or a critical essay on her portraiture, it is quite the best pictorial record.

From Houghton, Mifflin & Co. comes a holiday edition of Whittier's "Snow-Bound," for which Howard Pyle, John J. Enneking, and Edmund H. Garnett have made drawings, and Adrian J. Iorio has furnished decorations. The same house publishes "The Story of Pocahontas and Captain John Smith," told and pictured by E. Boyd Smith, who, it will be remembered, made the pictures last year for "The Story of Noah's Ark," with their rare combination of beauty and humor. His work this year is of the same character, though without the hilarious fun.

One of the most charming of the simpler holiday books is an edition of Thackeray's "Ballads and Songs" (Putnams), with illustrations by H. M. Brock. The drawings fit in capitally with the humor

and occasional touches of pathos of the poems. Less attractive, perhaps, but more elaborate, is Browning's "Last Ride Together," from the same publishers, with decorations and pictures by Frederick Simpson Coburn.

Perhaps the best of Dickens's Christmas tales is that which lies embedded in "Pickwick," including the visit to the manor farm, the story of the goblin, and the sports on the ice which tempted Mr. Winkle to skate and Mr. Pickwick to slide. This section of the book has been printed by the Baker & Taylor Company in a separate volume, as "Mr. Pickwick's Christmas," with illustrations in line and color by George Alfred Williams. Our wanderers take on a very genteel appearance in these pictures.

Among the holiday books offered this year by Scribners is an edition of Cable's "Old Creole Days," illustrated by Albert Herter.

Scribners also have "A Little Book of Bores," by Oliver Herford, who furnishes both text and pictures. The humor runs with the alphabet, beginning:

A is the Autograph bore
Whom Authors so loudly deplore,
Tho' it's probable quite,
If the Dears ceased to write,
They'd deplore even more than before.

The peculiar sentiment of Max Müller's "Memories" seems to retain a perennial interest for English as well as for German readers. Again we have it in decorative borders and designs, the old translation, a good one by George P. Upton, published by A. C. McClurg & Co.

Most attractive of all the cheaper holiday books, perhaps, is George Eliot's "Scenes of Clerical Life" (Macmillans), fully illustrated in color and line by Hugh Thomson. His color work is new to us, but it has all the charm of his more familiar line drawings.

"A Cheerful Year Book" (Holt & Co.) is a diary for recording engagements and other matters of the kind, and it is something more. On alternate pages there are humorous drawings with bits of aphoristic wisdom by F. M. Knowles on the perplexities of life. And, as the title page says, "the whole is introduced and concluded with profound and edifying remarks by Carolyn Wells." It is altogether a piece of foolery which combines the *utile* and the *dulce*.

CURRENT FICTION.

The Amulet. By Charles Egbert Craddock. New York: The Macmillan Co.

Once again we must wish that Miss Murfree might stick to her mountaineers. Her present historical romance is a sad affair, perfectly artificial and unreal from start to finish. It may be historically sound, but this, other things being unequal, is an altogether trivial consideration. The eighteenth century English of its dialogue is certainly incorrect, a curious farrago. When the fair Arabella is in form, to be sure, and thinking of her part, she says, "Lord," and "La," and "monstrous genteel"; and the gallant military gentlemen who surround her are capable in an emergency not only of "zounds" and "gad-zooks," but of "Stap me," and "Split me," phrases upon which they obviously plume themselves. The girl is silly and the men

are wooden; and the events recorded are supposed to take place on the frontier of the Cherokee country, in the year 1763.

The Soul of an Artist. By Neera. Translated from the Italian of Neera by E. L. Murison. New York: Paul Elder & Co.

It is easy to see why for the uses of an American publisher the present title is more available than "Anima Sola," or its equivalent. Few persons willingly expose themselves to books of religious philosophy or of devotion, but plenty of us are ready to set out at a moment's notice in search of the least bit of fresh information about the mysterious "temperament." These pages are supposed to contain the confessions or confidences of an Italian actress of note. They are addressed in a series of imaginary letters to an English nobleman with whom she has once been intimate, but from whom she has now been long separated. His "monastic soul" has permitted him hardly or not at all to overstep the bounds of friendship, while she has cherished for him an ideal passion, the expression of her search for that absolutely satisfying companionship which is never to become the portion of her lonely soul. These are, in short, the records of a nature abnormally sensitive and self-conscious. But while it is commonest in such cases, as in that of Marie Bashkirtseff, that a morbid personal vanity should be the principal motive, what is chiefly expressed here is a morbid spiritual fastidiousness. This person, to be sure, is emotionally unbalanced, the slave of moods, continually subject to a physical melancholy which might be taken as the result of an unfulfilled eroticism. To say this of an English or American book would be to condemn it as intolerable on grounds of taste if not of morals. But in these matters the Latin races have a dignity to which we rarely attain. Love, which has been in its highest form denied her, is Neera's theme. Of *Vamour* she is not ignorant: its unrest, its ecstasy, its satiety; but of love the interpreter of human life she can only dream:

When I encounter one who loves the gray mists of winter; who prefers the green depths of a thicket to the bluest of seas or the most golden of suns; cold to heat; to external life, reflection; to music, silence; to color, shadow; to action, thought; then I say this is my relative. When I encounter one who lives in his soul as a priest in his temple, serving and adoring the mystery of his office, there is my brother.

This is of course not a true autobiography, but a fiction. There is something a little humorous in the earnestness with which the writer of the "Foreword" advises us that Neera is really one Anna Zuccari of Milan, "wife of Signor Radius," and a well-known novelist; and that though she writes much of "the overpowering passion, love, she is very domestic, the angel of her home—not at all the portrait of any one of the heroines of her books." There is a further hint that the great Duse may have served as model for the writer of these confessions. This is a matter of slight consequence in judging of a book which expresses not a personality, but a temperamental type.

Trusia. By Davis Brinton. Philadelphia: George W. Jacobs & Co.

The Zenda microbe multiplies, and it

seems that with each new culture the creature creeps closer to the every-day, so that whereas the original heroes were on more or less lofty British altitudes they later became jaunty Americans, while the heroines grew less and less unapproachably exalted. We do not say that in "Trusia" the limit has been reached. The future it is given to none to know. But it may safely be said that thus far this type of romance has heard no clearer call of the tame. Not that the adventures fall below the orthodox standard in variety or vehemence. It is rather that the domain of lost causes, lost kings, and idolized, imperilled heiresses—apparent seems newly invaded when the saviors are a New York club man and his cockney valet. The proceedings are by turns stirring, comic, and bathetic. If there were less real gore and real killing it would read like unstaged extravaganza. Even as it is it seems widowed without light music.

Yet the plots and mysteries are not unoriginal. As the story bounds from one melodramatic situation to another, so the manner of its telling springs from height to height of flowery language, then plunges into sudden depths of contemporary slang. We have queering eyes and initiate perceptions, portraits gazing from their coigns, the soft indulgence of Diana (meaning moonlight), hair as light as the sheen of a spider's craft, a mouth as sweet and kind as the animate soul of a rose. Then in mitigation of all this dazzle the hero may be heard saying, "Forgive me, sweetheart, but love will not be denied. Let the king have Krovitch, but you come with me." Yet when all is said the traditional proof of the pudding is not wholly lacking—to this sillibub: The eating of it is painless and entertaining.

Under Pontius Pilate. By William Schuyler. New York: Funk & Wagnalls Co.

Mr. Schuyler's version of the New Testament story is a series of imaginary letters supposed to be addressed to a Stoic friend at Athens by a Roman military officer quartered in Judæa, one Caius Claudius Proculus, the nephew of Pilate's wife. All the well-known figures of the drama are introduced. The writer is intimate with Herod, Herodias, and Salome, and is present at the dance which earned the head of John the Baptist. At every turn of the narrative, which is naturally crowded with direct quotations from the New Testament, the reader asks himself what is the gain over the immortal outlines of the original. Apparently to supply details for the unimaginative is the motive of the whole.

Mr. Schuyler makes Mary Magdalene the heroine and Caius Proculus her lover, who, after her conversion, is drawn by her example into the Christian faith. In order to bring together the chief personages he assumes that she is identical with that other Mary who chose the better part in the house of Lazarus. In the Bible there is certainly no such identification. It is all done reverently enough, and can be read; but there is an effort at modernization in the attitude of the characters, and in the style there is more than one lapse of taste. It was, we think, a mistake to imply in the preface that the letters exist in a Latin authentic original, though, of course, only the most unwary could be taken in.

Rosemary in Search of a Father. By C. N. and A. M. Williamson. New York: S. S. McClure & Co.

When this has been described as a "pretty" tale of the whipped cream and bonbon box type, there is not much more to say about it. A rich, disconsolate young man mourning his lost lady love is seized upon by an adventuresome Monte Carlo. She plays upon his respectful sympathy with a pathetic romance of hunger and a wicked, gambling mother. He (in all honor) engages her services as secretary at forty dollars a week, and hands her out ten thousand francs to begin with. As he is unimpeachably faithful to the lost lady—in addition to being the most high-toned young man alive—Hugh is also the most innocent youth who has ever made money in a gold mine and come to Europe to heal a broken heart. After his rescue by a petticoated little Lord Fautleroy, the story proceeds smoothly to its happy end, by all the sign-posted highroads known to sentimental fiction.

The Doctor. By Ralph Connor. New York: Fleming H. Revell & Co.

"The Doctor" is a conventional novel about young people (apparently for young people), reeled off with the fluency of a practised story teller. Its best point is a description of a diphtheria epidemic in a Canadian construction camp; its least effective, the Southern beauty who had "a reserve of proud command due to the strain of a regnant, haughty, slave-ruling race." Amateurs of every kind of dialect will find their account between the covers of this book—habitant talk, Irish brogue (of the Irish comedy variety), and whole pages of which the following is a fair example: "But 'e hain't got no toes to give 'im the feelin' of 'is toes in 'is mind or hennywheres else." "Dummed old fool," sez the doctor." Presumably there exist somewhere readers who find this amusing, since the first edition has run high into the tens of thousands even before the date of publication, but it is hard to see why the average adult should not find the story at once commonplace and passably long-winded.

LAFCADIO HEARN.

The Life and Letters of Lafcadio Hearn. By Elizabeth Bisland. 2 vols. Boston: Houghton, Mifflin & Co. \$6 net.

About one-third of the first of these two generous volumes is taken up with the *Life* by Mrs. Bisland, who was an intimate friend of Hearn's from his early manhood until his death; the *Letters* follow, printed so far as possible chronologically (he eschewed dates), and without comment. Such a division is somewhat unusual, but, in the present case, judicious. Of the biographical chapters, it is possible to speak with praise, while admitting considerable reservations. Despite an occasional infelicity of taste and even of grammar, they give an eloquent account of the struggles through which Hearn passed, and depict in warm colors the romantic side of his character. What we miss is any adequate critical examination of his literary method or any study of the strange exotic elements that entered into his philosophy. Hearn's place in our literature by reason both of

the manner and the contents of his writings, is so unique that the absence of such critical discussion in his official biography lays the work open to the charge of amateurishness. Altogether, the most valuable sections here, if not in the whole book, are the half-dozen autobiographic papers now for the first time printed—little sketches of particular moments in his career which make us regret that death or uncertainty of purpose kept him from writing the whole inner story of his life; it would have been a work of extraordinary interest, without parallel in the language.

If ever of any one, it could be said of Hearn that the child was father of the man. The very elements of his nativity—his birth from the love-match of an Irish army officer and a Greek woman on the island of Lefkada (from which, by an unexplained alteration of the first vowel, he received his name); his early translation to Ireland and abandonment by his parents—may help to account for the exotic strain in his character and for the unappealed nostalgia that drove him, through life, a restless wanderer from land to land. All this was pretty well known before, but we owe to the present biography a knowledge of the morbid, tormented years between his first childhood and his emigration to America. He was, it appears, adopted by a wealthy grand-aunt, a Mrs. Brenane, and taken to Wales, where he was surrounded by the heated religious atmosphere of a home newly converted to Catholicism. The most striking of the autobiographic fragments goes back to his sixth year, when, as he says, he knew a good deal about ghosts, and very little about gods. He had been taught to pronounce the invocation, "In the name of the Father, and of the Son, and of the Holy Ghost," but had no understanding of what the words meant. He continues:

One of the appellations, however, seriously interested me; and the first religious question that I remember asking was a question about the *Holy Ghost*. It was the word "Ghost," of course, that had excited my curiosity; and I put the question with fear and trembling because it appeared to relate to a forbidden subject. The answer I cannot recollect; but it gave me an idea that the Holy Ghost was a *white ghost*, and not in the habit of making faces at small people after dusk. Nevertheless, the name filled me with vague suspicion, especially after I had learned to spell it correctly, in a prayer-book; and I discovered a mystery and an awfulness unspeakable in the capital G. Even now the aspect of that formidable letter will sometimes revive those dim and fearsome imaginings of childhood.

But he was not long to remain in this groping ignorance. One of the few visitors to the house was a certain "Cousin Jane," who passed the winters with them—a tall girl, as he describes her, a convert, who looked like some of the long angels in his French pictures, and who gave him "the idea of Sorrow as a dim something that she personally represented." One day she caught the child up into her lap, and, with her piercing black eyes fixed upon his, began to catechise him:

"My child!—is it possible that you do not know who God is?"

"No," I answered in a coking whisper.

"God!—God who made you!—God who made the sun and the moon and the sky,—and the trees and the beautiful flowers,—everything! . . . You do not know?"

I was too much alarmed by her manner to reply.

"You do not know," she went on, "that God made you and me?—that God made your father and your mother? and everybody? . . . You do not know about Heaven and Hell?"

I do not remember all the rest of her words; I can recall with distinctness only the following:

"and send you down to Hell to burn alive in fire for ever and ever! . . . Think of it!—always burning, burning, burning!—screaming and burning! screaming and burning!—never to be saved from that pain of fire! . . . You remember when you burned your finger at the lamp?—Think of your whole body burning,—always, always, always burning!—for ever and ever!"

I can still see her face as in the instant of that utterance,—the horror upon it, and the pain. . . . Then she suddenly burst into tears, and kissed me, and left the room.

Just how much the man's imagination has played over this memory of childhood, it would not be easy to say; but on the whole one gets the impression of a boy strangely sensitive to the dim shadows of life and involved from birth in a network of dreams from which he could never free himself. And from this imaginative terror of religion he passed to the more tangible distresses of poverty. For two years, indeed, he had the protection of a Jesuit college in the north of France. It was here that he acquired his intimate knowledge of French. Here he lost one of his eyes while playing the game of "The Giant's Stride," a disfigurement of which he was always extremely sensitive; and here he became possessed with the ineradicable notion that some mysterious Jesuitical plot was formed against him. After this he disappears for a while into obscurity. "When I was a boy of sixteen," he wrote in Japan to one of his pupils, "although my blood relations were—some of them—very rich, no one would pay anything to help me finish my education. I had to become what you never have had to become—a servant. I partly lost my sight. I had two years of sickness in bed. I had no one to help me. And I had to educate myself in spite of all difficulties." Then came a brief season of starving in London, of hiding in a workhouse in an evil quarter by the Thames, and some time in the year 1869, at the age of nineteen, without money or friends, and with broken health, he found himself in the streets of New York. How he now contrived to live does not appear. He left the city by an emigrant train for Cincinnati, carrying with him through life an implacable hatred and horror of New York as "something cyclopean without solemnity, something pandemonic without grotesqueness—preamite bridges—superimpositions of iron roads higher than the aqueducts of the Romans—gloom, vapor, roarings and lightnings." In Cincinnati he got into newspaper work, toiling fourteen hours a day at "that intensely vulgar and commonplace thing, called American journalism." Here he became acquainted with H. E. Krehbiel, to whom the most interesting of his letters were addressed. But the lure of the South was in his blood, and he soon went to New Orleans.

At this point his correspondence begins, and for the rest of his life we can track him through his own letters in his wanderings in the West Indies, his brief return to New York, and his various homes in Japan. It was well known that he married a Japanese

woman, and for the sake of his children became a subject of the Mikado. It is now plain that in his later years he began to weary of Japan as he had wearied of everything else. His was the extremely romantic temperament that craves ever-changing sensations, and is never content. In the end the gray monotony of Japanese life, the lack of deep emotions, the obliteration of personality, began to wear on him; and at the same time he saw all that had first attracted him in the country pushed to the wall by the exigencies of the new civilization. There is something painful in the utter disillusion of his last letters. They are filled with one cry—the cry for money that he may provide for his family. His position as Government teacher was insecure, and the royalties on all his books were amounting to only \$88 a year; death, swift and sudden, came to him as a release.

Unquestionably these letters of Hearn's are among the most interesting that have appeared for a number of years—probably the most valuable since the publication of FitzGerald's. It is unnecessary to say that Hearn had at his command a style of extraordinary vividness and flexibility. Everything lives under his magic touch—his creole home in New Orleans, the waifs of society that cross his path, the drowsy splendor of tropic islands, the enormous madness of great cities, the exquisite delicacy of Japan. Most of all we have been interested in the intimate revelation of the artist preparing himself for his chosen work. He had the conscience of the French *littérateur*, of a Flaubert, one of the rarest of Anglo-Saxon gifts. In the *débacle* of religious convictions he turned to art as to a new and relentless faith. "Yet the hardest of all sacrifices for the artist," he writes, "is this sacrifice to art—this trampling of self under foot!" And to the extent of crushing out worldly ambitions, he made the sacrifice. His aim was perfectly clear. He wished "to create something different from the stone-gray and somewhat chilly style of latter-day English or American romance"; he sought "the English realization of a Latin style, modelled upon foreign masters, and rendered even more forcible by that element of *strength* which is the characteristic of Northern tongues." To this end he toiled endlessly over the language of his essays and tales, writing and rewriting with infinite patience. He had "the rare yet terribly necessary gift of waiting." And with his style he deliberately fostered all the romantic elements of his own character. There are unpleasant stories abroad about the devious ways into which his search for unusual emotions led him—stories to which Mrs. Bisland does not allude, but for the most part his cultivation of the romantic *Ich* was innocent, if odd. His reading was in out-of-the-way fields; at one time in New Orleans he owned a library of some 500 books, valued at \$2,000, and every volume "queer." His unappealed longing for the tropics was due in part to delicate health, in part to his passion for luxurious sensations.

As sometimes goes with the impressionistic temperament he had also a curious interest in science, and made of Herbert Spencer the Bible of his faith. It was this union of impressionism and devotion to Spencerian evolution that rendered him the

ideal interpreter of Japan. To the spirit of India he would have been utterly blind, for the Buddhism of that land was the farthest possible removed from impressionism or romanticism of any form; the austere self-abnegation of the ancient Pāli books would have remained forever foreign to him. But to the Buddhism of Japan, with its mixture of Shinto ancestor worship and its flutterings of quaint æstheticism, he came with the fullest preparation. His Spencerianism easily fused with one aspect of Buddhist philosophy; his romanticism was ready to seize on all the ghostly suggestions of a past forever haunting the present, and coming to the surface in unexpected ways. The result is a series of books perfectly unique in our language. They are not in the great, free tradition of English literature, but they will probably increase in fame for many years to come. The disappearance of the ancient Japan on which they are based will give them the rare preciousness of something that cannot be repeated or imitated. Into the laboratory of the brain that created these pieces of jewelled impressionism, the letters introduce us. Almost, but not quite, we can see the soul of the man.

Life and Letters of Robert Edward Lee.
By J. William Jones. New York: The Neale Publishing Co. \$2.

The atmosphere of Washington and Lee University is difficult to resist. The veneration that surrounded Lee when he undertook its presidency after the war, kindness, devotion, loyalty, all the higher emotions that ennoble life—with such things this book is saturated. It cannot but stir the best feelings of every good man, and yet it must be stated that the author is extremely disappointing. His title is imposing, his fulfilment is scant. He does not in the least accomplish the purpose announced in his preface of giving his subject fresh treatment.

Dr. Jones was a Confederate chaplain during the war, and has since been connected with Washington and Lee University. There he had many opportunities of seeing Lee, and after his death had access to his papers. Further, Dr. Jones has had considerable experience of editorial work. He was therefore well qualified to present to the public a biography of Lee founded on unused documents and information, or a volume of personal reminiscences, or, again, a collection of documents hitherto unpublished. Unfortunately, he fails all along the line. He has a few unpublished letters to set out, but these are all of slight importance; they are buried under a mass of other letters reprinted from previous books on the subject, and there is no system to indicate to the reader which letters are hitherto unpublished and which not. Of personal reminiscences we get only a very few pages, mostly at the end of the book; such value as they may have is overshadowed by the fact that they are inhedded in a long narrative of the war that is neither fresh nor specially distinguished for accuracy. Among the unpublished papers perhaps the most interesting are some scraps found in Lee's army satchel, untouched since Appomattox. From these one quotation may be made:

Private and public life are subject to

the same rules; and truth and manliness are two qualities that will carry you through this world much better than *policy*, or *tact*, or *expediency*, or any other word that was ever devised to conceal or mystify a deviation from a straight line.

In conclusion this volume suggests that the time is now getting near when Lee's correspondence should be given to the world complete and edited with the same scientific care as that of Washington.

Jefferson, Cabell, and the University of Virginia. By John S. Patton. New York and Washington: The Neale Publishing Company. \$2.

This volume of nearly four hundred pages contains, first, an account of the founding of the University of Virginia, based on the correspondence of Thomas Jefferson and Joseph C. Cabell, Jefferson's able coadjutor in securing the necessary legislation. The legislation prior to the chartering of the university in 1819—such as Mr. Mercer's bill of 1817—is entirely overlooked. This legislation, and a full account of the Jefferson and Cabell correspondence, has been treated in the History of the University of Virginia and its Alumni, published by the Lewis Publishing Company (New York, 1904). Next is given an account of the early days of the university, and especially of the misbehavior of the students, until the final evolution of the "honor system." Then follows a description of the Jeffersonian buildings, an account of the early faculty, notices of the literary societies, and other student organizations, of their various publications, and of the great fire of 1895. We have also the story of the restoration of the buildings, the late development of athletics, and of student societies, and a brief account of the "schools"—as the separate and independent chairs of this university are called—with the recent establishment of the presidency of the university. Chronological order is not strictly followed, but the reader may get a good idea of the organization and development of the university.

Other chapters are devoted to the alumni who were in the Confederate army and the civil service, and to lists of students who attained honors and won prizes. In chapter xxv. the list of orators before the Society of the Alumni, from 1838 to 1861, is very defective. One misses the names of the Hon. Muscoe R. H. Garnett, orator in 1849, and the Hon. John Randolph Tucker, orator in 1850.

In addition to a number of errors of proof, which may easily be corrected, we find others more serious, among them the following: p. 12, Edmund Randolph for Edmund Pendleton; p. 33, Budwell for Burwell; p. 49, Dale for Dade. Professor Bledsoe is referred to as Alfred on p. 214 and in note to p. 335, but correctly as Albert on p. 335. Notwithstanding these oversights, the volume contains much information that an alumnus may be glad to have in convenient compass.

Der Erste Petrusbrief: seine Entstehung und Stellung in der Geschichte des Urchristentums. Von Dr. Daniel Völter. Strassburg: J. H. Ed. Heitz.

The first epistle of Peter is not one of the greatest of the New Testament writ-

ings, but it has a beauty and attractiveness peculiar to itself in its kindly sympathy, its intimacy of appeal, and its pervading atmosphere of buoyant hope. Many a downcast spirit has turned to it and found refreshment when the loftier writings of St. Paul and the Evangelists seemed to be beyond reach. Critical objections of no little seriousness have been raised against the Petrine authorship, and the date of the writing has been fixed in various years of the last two decades of the first century, and by Baur as late as 115 A. D. Harnack, to whom the objections to the authenticity are insuperable, yet who cannot believe the letter as a whole to be a falsification, has suggested that the opening and closing paragraphs are interpolations, thus saving the author from the charge of pseudonymity. In this he is followed by McGiffert. But now appears a monograph by Dr. Daniel Völter, professor of theology at Amsterdam, which finds far more serious interpolations, involving, in fact, all the distinctively Christian portions of the epistle. The theory of the Dutch scholar amounts really to a division of the letter into two distinct compositions, an original portion, which was written in Rome in the years following the Neronian persecution, and sections added by the redactor for the purpose of strengthening Christians of Asia Minor during a persecution which occurred about 115 A. D. The Christianity of the original letter is declared to be little more than a denationalized Judaism, founded almost exclusively upon the Old Testament, and not strictly a new religion grounded upon original doctrines and sacraments. To the later author, all allusions to doctrines positively Christian are attributed.

There is, of course, no textual authority for such a division, and the internal proof which Professor Völter advances appears weak and inconclusive. As a specimen of the evidence for interpolation may be cited the clause in 1:3, "begat us again unto a living hope by the resurrection of Jesus," whereas, in 1:23, the text reads, "having been begotten again . . . through the word of God." The critic thinks it impossible that both the "word of God" and the "resurrection of Jesus" should be made the media of the new birth, and he therefore strikes out the first passage with its allusion to Christ as not authentic. This amounts to saying that the Biblical writers were granted inspired protection from a change of metaphor—which is a serious draft on faith. Indeed, it is the discovery of a mixed metaphor in 2:5ff., the passage on the "living stones," upon which Dr. Völter lays greatest weight in proving the presence of large interpolations. But, we may ask, when was it demonstrated that the writer of a simple letter like I. Peter could not become involved in his figures? The theory proposed is ingenious, but the reasons advanced have no cogency whatever. In aducing parallels, however, between I. Peter and other writings, such as Romans, Ephésians, James, and I. Clement, Dr. Völter has done some careful work, and his brochure is valuable for this material, whatever one may think of his principal thesis.

The brilliant success of the analysts of the Hexateuch and of certain of the pro-

phetical writings has given occasion to violent endeavors to achieve like fruitful results in the documentary separation of literary productions of too brief extent and too great homogeneity to require the hypothesis of different sources. It is one thing to discover distinct documents in a history extending over centuries, in which the most careless reader finds discrepancies, and quite another matter to establish diverse elements in a simple tract of a page or two. The real significance of abortive endeavors like the theory under review is in the tribute they imply to the success of the creators of the sober Biblical science of modern times.

America's Awakening. The Triumph of Righteousness in High Places. By Philip Loring Allen. Fleming H. Revell Co. \$1.25 net.

The recent exposure of political and corporate corruption in this country has been, on the whole, so depressing, the plain and necessary portrayal of facts so harrowing and upsetting, that it is refreshing to find a book which, like this of Mr. Allen's, takes the hopeful view. Yet it should be said at once that the volume has no kinship whatever with the pious optimism which has followed so promptly, especially in certain religious weeklies, President Roosevelt's pronouncement against the muck-rake. The common starting-point of all such baleful apologies is a denial of things as they are. Mr. Allen, on the other hand, has nothing to conceal or condone. He does not hold a brief for any reformer or any fad. What he has done is to point out, in a straightforward way, the forces which, in this period of extraordinary social turmoil, have steadily made for righteousness both in the community and in the average man; to show some of the specific good that has followed the exposure of evil; and to indicate some of the directions in which genuine reform is unmistakably going.

After a short chapter on "How the Awakening Came," in which the situation in 1900 and the general sweep of reform since that time are briefly sketched, and another on "Graft among the Fathers," Mr. Allen passes in rapid review typical episodes in the public careers of six leaders of reform—LaFollette, Jerome, Folk, Weaver, Tom Johnson, and Everett Colby. The purpose here, as elsewhere, is not so much to narrate the main facts, though the narrative is well attended to, as to point out the reasons for the success which each of these leaders attained, and the results which have already flowed from it. With President Roosevelt as the inspiration, a few men working for the public good have, in a brief time, aroused the public conscience; and it is from this public conscience, long thought to be dead, that the reformers have drawn strength. Whether it be Missouri farmers rallying to support Folk, or citizens of Philadelphia hounding their councilmen until the gas lease was withdrawn; or men, women, and children in New York contributing to a Jerome campaign fund, the explanation is the same. The people who did these things had responded to a moral appeal, and were ready to do anything in support of leaders whose honor and sincerity they could trust.

All this, of course, has in one way or

another been pointed out before, though hardly so interestingly or connectedly. Mr. Allen, however, is one of the first to dwell upon the deep and widespread moral purpose which has underlain these various movements, and which still perdures. The striking thing after all is that, had as conditions have been, the people have not lost faith in the possibility of bettering them. Most noteworthy of all, perhaps, is the spectacle of machine-made legislatures, as in Pennsylvania and Missouri, supporting reform governors, and passing laws of a progressive and reforming character. Non-partisanship and independent voting have the field, politics and public work have been separated as never before, and the plea for party loyalty and the straight ticket has lost much of its charm. To quote Mr. Allen:

When the various Legislatures met in 1905, there were for the first time, probably, in the history of this country, five States with Democratic governors and Republican Legislatures. The number was reduced to four by the unseating of Alva Adams in Colorado. Yet the other Democratic governors got along quite as well with their opposition Legislatures as the average executives in States where there had been a clean sweep. There was not a deadlock in any of the States with divided governments. In Missouri, where the Senate was Democratic and the House Republican, it was the latter body which gave Gov. Folk the more loyal support. . . . In Massachusetts, Gov. Douglas actually vetoed fewer bills than any of his Republican predecessors who had dealt with legislatures of their own party faith. The Republican governors of Michigan and Indiana vetoed eleven and seventeen, respectively, of the bills passed by the Republican Legislatures of those States. Gov. Johnson of Minnesota, though a Democrat, was able to approve all but one of those passed by his State's Republican Legislature.

The novelty and assured interest of Mr. Allen's book lie chiefly, of course, in his interpretation of events. Sometimes, however, he adds materially to our knowledge—or at least to generally available knowledge—of important transactions. Such is his detailed account of the source and size of the Jerome campaign fund of 1905:

There were, in theory at least, three separate funds. The Citizens Union had one, the Jerome nominators had one, and there was a third which was spoken of as "Jerome's personal fund." The Citizens Union issued on October 17th an appeal for \$50,000. . . . The Jerome nominators two days later asked for \$65,000. . . . The money began to come at once, and it is the proud distinction of this campaign that it did not come in large corporate checks, but in small amounts from individuals whose hearts were in what they sent. The largest check received was for \$5,000. The smallest item was a "lucky penny." [The total amount collected was \$120,433.53, given by 2,443 contributors.]

The last two chapters, on "The Trend Towards a Pure Democracy" and "The Moral Wave and the Average Man," are full of cheer for all who believe in popular government. In the former, Mr. Allen points out particularly the extent to which virtual popular election of United States Senators has already gone in this country. A constitutional amendment seems as remote as ever, but nomination by primaries or conventions at the same time as other State officers, nomination by special convention, as lately in Rhode Island, and the pledging of legislative candidates in advance, are methods which are rapidly

bringing the choice of Senators under popular control. Of the thirty vacancies to occur in 1907, one-half "have already been filled or will be filled by methods that approximate popular election" (p. 261). The last chapter calls attention to the striking increase in personal and business honesty in the last five years, as shown, for example, by the receipts of national and State "conscience funds," and the statistics of fidelity bonding companies. One puts down Mr. Allen's book, not with the comfortable assurance that the millennium is at hand, but with distinct heartening and courage at the fresh and stimulating view of the earnestness and moral soundness which the American people are exhibiting in this crisis of their democracy.

How to Choose a Farm. By Thomas F. Hunt. New York: The Macmillan Co. \$1.75.

This is a remarkable volume for the amount of information that has been compressed, without loss of enthusiasm, and dryness of style. It covers an enormous field; including the soils and the conditions of farming in every part of our continent. For instance, Florida, the only region of the United States, besides California, where tropical fruits can be grown, is treated with as much accuracy as the corn and apple States. In this connection we note that the work is based on critical examination of facts; the style is readable, never swamped by dry statistics.

Dr. Hunt lays stress on home-building. Those who exploit land merely to wring wealth out of it are pretty sure to end in disaster. One of the most conspicuous examples was the Florida orange-planting of the eighties—tens of thousands investing their all, together with millions of borrowed money, in orange groves. The frosts of 1895 swept out the whole enterprise, and drove the victims out of the State like a flock of sheep. Had these people gone to create homes, instead of to get rich quick, they would be there now, owning good farms, and would have all the oranges the market calls for. The present tide, not only into Florida but elsewhere, countryward from city, is fortunately of a wholesome home-making sort. This book should be carefully studied by those people who purpose "returning to Nature." They will discover that men who fail in one spot will do well to examine their methods rather than seek another location with unknown conditions. The future development of agriculture will be in the way of more scientific culture, more segregation of crops, and more knowledge of environment.

Drama.

The Struggle for a Free Stage in London. By Watson Nicholson. Boston: Houghton, Mifflin & Co. \$2.50 net.

This book, although not likely to prove very attractive to the ordinary reader of theatrical biography or gossip, will be valuable to the genuine student of dramatic history, for the demonstration which it affords of the blighting effects of a monopoly upon the art which, professedly, it

was designed to foster. In it Dr. Watson Nicholson, instructor in English at Harvard, traces in detail, with praiseworthy industry, the various phases of the long struggle between the minor London theatres and the two great houses, Covent Garden and Drury Lane, whose patents conferring the sole right to present the national drama were granted by Charles II. in 1662 and continued in force, though constantly defied or evaded, until they were abolished finally by the Theatrical Regulation Bill in 1843. It is all ancient history, of course, but the story hitherto has been told "by parcels, not intently." Dr. Nicholson has pieced it together, putting all the incidents consecutively and showing how the successive monopolists by their dog-in-the-manger policy, reckless and incompetent management, and spirit of commercialism made the stage a synonym for all that was contemptible and puerile, and finally involved themselves in bankruptcy. He has gone for his material to the original sources of information, contemporaneous newspapers, magazines and pamphlets, police records, memoirs, biographies, private correspondence, official documents of all sorts, parliamentary reports, court proceedings, petitions, etc., and has amassed an immense amount of information, well worthy of study, but far too bulky and complicated for brief analysis.

Although the monopoly conferred by the patents was absolute theoretically, it was from the first violated frequently. Neither threats nor prosecution could deter minor managers from producing prohibited plays in slightly modified forms, and there never seems to have been any pretence that Charles's decree was binding upon his successors. William III. and Queen Anne both recognized the injustice of it, and proclaimed their own independence of it, by granting special licenses to favored managers. But, apparently, in asserting their own prerogative they were unwilling to cancel the privilege given by a predecessor. It was not, however, until 1737 that the permanency of these grants of Charles received parliamentary recognition in the Licensing Act of George I., and it was during the next fifty years that the patentees used their powers most tyrannously. But it was also this act which, by practically investing the Lord Chamberlain with the royal prerogative and so bringing about the licensing of many opposition theatres, made the position of the monopolists impossible, and led directly to the Theatrical Regulation Bill and a comparatively free stage.

It is interesting to note the similarity between the theatrical conditions of a hundred years ago and those which prevail to-day. There are no patent houses now, but the existing system of self-constituted monopolies is having much the same effect. The higher drama is neglected, the race of qualified actors is dying out, the serious playwright is discouraged, and the stage is sinking deeper and deeper into the slough of indecency and silliness. The parallelism is immensely suggestive. Now, as then, the root of the evil is in the lack of that competition without which there can be no development. It is melancholy to find a man of the ability of Richard Brinsley Sheridan employing all the resources of his intellect to maintain the rotten system of which he was the bene-

ficiary, and using the same old argument, so familiar to modern ears, that the foolishness or corruption of the stage is the inevitable consequence of the depravity of the public taste. Edward Bulwer, the first Lord Lytton, on the other hand, seldom appeared to greater advantage than when he was leading the fight against theatrical privileges, pleading the cause of free trade in art, and insisting upon the true function of the stage, to inspire as well as to entertain.

Among the many interesting points noted in Dr. Nicholson's book is the manner in which the introduction of transatlantic steamships contributed to the overthrow of the patent houses by opening up a new field to the principal English actors and thereby rendering them independent. Many other curious facts in the history of theatrical London are to be found in these pages. For less conscientious readers, Dr. Nicholson furnishes a convenient summary of his work, as well as a complete bibliography and index.

"The Rose of the Rancho," by David Belasco and Richard Walton Tully, which was produced in the Belasco Theatre in this city on Tuesday evening, is a play on an American subject, having a semi-historical flavor, and dealing with contrasted national types, and is, on these counts, entitled to a word or two of record. It treats of the unscrupulous land-grabbing which occurred in Southern California, after the United States had taken possession, in cases where the original Spanish residents had failed to avail themselves of the law of registration. As drama it is unimportant, being a machine-made piece of an essentially theatrical and spectacular order. But the leading characters—an American adventurer, a young Government agent, Spaniards, male and female, an old priest, and so forth—have a certain vitality and picturesqueness. The dialogue is diffuse and poor. The chief value of the representation lies in the setting and stage management, both of which are uncommonly excellent. Such pictures as those of the Mission Garden, the courtyard of the Rancho, and the roof of the house, with the surrounding landscape, have seldom been surpassed on any stage. If Mr. Belasco's plays were always worthy of the frame in which he exhibits them, the artistic theatre would be an accomplished fact. The acting in "The Rose of the Rancho" is fairly good.

Music.

METROPOLITAN GRAND OPERA.

The first gun in the grand opera war was fired on Monday night by Heinrich Conried at the Metropolitan Opera House. It will be answered by Oscar Hammerstein next Monday at his new Manhattan Opera House. Mr. Conried's opera was Gounod's "Roméo et Juliette," which gave him an opportunity to introduce two of the leading singers he has this season added to his list—Miss Geraldine Farrar and Charles Rousselière, the Parisian tenor. A good French tenor has been a desideratum at our opera house for several seasons; for lack of one, the French repertory was gradually cut down till nothing

was left but "Carmen" and "Faust." Six other works of the French school have now been added, in the expectation that M. Rousselière will come to their rescue; and if we may judge by his *Roméo*, confidence in him has not been misplaced. He is fortunate, like Jean de Reszke, in being of the manly class of tenors, in voice as well as in bearing. His diction is clear, and he fully entered into the dramatic spirit of his part.

Miss Farrar has been for several years at the Imperial Opera House in Berlin, a local favorite. Last summer she participated in the Mozart Festival at Salzburg, where her Zerlina was marvelled at as an achievement unequalled since the days of Pauline Lucca. Then she sang at the Wagner Festival in Munich, with similar result; the critics, none too friendly to Americans as a rule, confessed themselves enchanted for once; an Elizabeth like hers, they declared, had not been heard there in years. A wide range of vocal style and dramatic talent is required to do justice to rôles so diverse as Zerlina in "Don Giovanni" and Elizabeth in "Tannhäuser." Widely different, again, from both those rôles, is the Juliette of Gounod. Miss Farrar sang and acted it as if it were her one specialty. The opinion was expressed by many that not only in the operatic, but on the local dramatic stage, too, no woman had ever presented so charming, so convincing, a Juliette as hers. With her dark hair and eyes, and her graceful contours, she was the ideal of a Veronese girl in her teens. Her acting was tragic realism of the highest type. Her facial expression is as fascinating, as subtle, as varied, as Calvé's; every note of the score is mirrored in her features. To all this she adds a voice distinguished by the same beauty and expressiveness; a voice of a most agreeable timbre, lending itself to every variety of coloring. She achieved a pronounced success.

The Standard Operas. By George P. Upton. Chicago: A. C. McClurg & Co. \$1.50.

"Nineteenth printing" is the eloquent mark on the new edition of Mr. Upton's useful handbook, issued by its publishers just in time for the opening opera season. It indicates the great and growing interest taken in grand opera in this country. The 1891 edition was a book of 371 pages; the latest edition has 495 pages, besides 92 portraits of singers in favorite rôles. One of these portraits is of Geraldine Farrar as Juliette. Equally up to date is the list of operas, except that, strange to say, the two reigning sensations, Puccini's "Madame Butterfly" and Richard Strauss's "Salome," are not included. Perhaps the author thought they had not yet earned their right to be classed among "standard" operas. There are some older operas in the list that might as well have been omitted, as they are never sung in this country; among them, Auber's "Crown Diamonds," Brüll's "The Golden Cross," Flotow's "Stradella," Goldmark's "Merlin," Halévy's "L'Éclair," Herold's "Zampa," Lortzing's (not Lörtzing's as the printer persists in making it) "Czar and Carpenter," Marschner's "Hans Heiling," and more than a dozen others; but it is better to have too many than too few. The principal operettas of Genée, Lecoq, Johann Strauss, Sullivan, Offenbach, and others

are also included, quite properly. The appendix contains a bibliography of American opera, and to the regular index the author has added an index of the principal vocal numbers in the various operas he describes and analyzes—a feature which will commend itself to many. Heretofore the excellent Champlin and Apthorp "Cyclopedia of Music and Musicians" (Scribners) has been the only reference book in which one could find out where a certain aria or title of which one happened to remember the name, but not the source, might be found. In the next edition of his admirable handbook Mr. Upton should refer to the arias in Gounod's, Meyerbeer's and Bizet's operas by their French instead of their Italian names; they are now always sung here in the original language or in English.

Of all the great composers none seems so un-Gallic as Bach, yet there is quite a Bach cult in France. Berlioz professed to see nothing in Bach's music that was worth while; but Saint-Saëns tested him and found that this indifference was based on ignorance; he had not studied the scores he condemned, and was greatly pleased with what Saint-Saëns played for him. That was a good many years ago, but Saint-Saëns is still doing missionary work for Bach. On Tuesday afternoon he gave a recital in Carnegie Hall at which, for the first time here, he was heard as an interpreter of other music than his own. He began with the Italian concerto and a prelude and fugue by the great cantor, playing them in a delightfully lucid, archaic style. After adding two Rameau pieces, the pianist played Beethoven's A flat major sonata; he made the variations of the first movement remarkably interesting, and played the funeral march with deep feeling. Like his friend Liszt, Saint-Saëns was not afraid to put a symphonic movement on his programme—the andante from Haydn's "Surprise" symphony, charmingly translated into the pianistic idiom. But what gave most pleasure to the audience was his playing of Chopin's "Barcarolle" and of adroitly made arrangements of excerpts from his two operas "Samson et Dalila" and "Henry VIII." M. Saint-Saëns has announced that his present tour will close his career as a pianist.

The Vienna Male Chorus will visit the United States in April, 1907. The itinerary at present is projected to include New York, Boston, Chicago, Buffalo, Baltimore, Washington, Philadelphia, and Indianapolis. The proceeds of the concerts will be given to local Austro-Hungarian and other charities. Two hundred singers will make up the chorus, which pays its own expenses.

Art.

Histoire de l'Art depuis les Premiers Temps Chrétiens jusqu'à Nos Jours. Edited by André Michel. New York: G. E. Stechert & Co. Tom. I. (Vols. I. and II.). Des Débuts de l'Art Chrétien à la fin de la période romane. About five hundred illustrations. 15 fr. a volume.

The essentially social nature of French scholarship appears to advantage in this composite history of Christian art. Ten

collaborators have worked on this first of eight volumes, yet there is no sense of disparity of point of view or of disquieting difference of style. Much of the credit for so remarkable a degree of coördination is due to the general editor; more to the sound tradition of higher education in France. The work is worthy of the race that produced the "Grande Encyclopédie" and the "Histoire Littéraire." No other nation seems to have the art of collective scholarship. Compared with the work before us, the various German *Grundrisse*, etc., are lacking in sense of proportion, and such admirable British enterprises as the "Cambridge Modern History" in consistency and attractiveness of style.

It is a work of specialists for the lettered public, by no means a manual for first studies. Latin quotations are not translated, illustration is reduced in number and scale to the minimum. The book can be used profitably only by those who carry in their heads the memory of the important monuments, or better, read beside a photograph cabinet. It is, in short, a book for those who are in some sense scholars, and for such will be peculiarly valuable, as a comprehensive appreciation of recent discussion and traditional theories. The motto of the writers has been "prove all things."

Early Christian art has been treated by André Peraté in a delightful essay, instinct with sympathy and good sense. Roman architecture before the Romanesque period has been entrusted to Camille Enlart, who also writes at length on Romanesque architecture. A chapter of extraordinary interest is that on Byzantine Art, by Gabriel Millet. His chief merit is to have defined that Oriental element in Byzantinism which usually has been vaguely asserted. The very obscure topic of Merovingian and Carolingian art—the examples of which are practically confined to illuminated manuscripts—has fallen to Paul Leprieux. Italian painting throughout the period has been allotted to Émile Bertaux, in two essays. He has also treated the Romanesque sculpture of Italy. Sculpture of that period in France has been selected by the general editor, André Michel. Émile Male has set forth the beginnings of mural painting and of glass painting in France. Northern miniature painting is assigned to Arthur Haseleff. The late Émile Molinier has contributed articles on barbaric goldsmithy (enamel work), and also on the minor arts—ivories, bronzes, jewelry, enamels—for the entire pre-Gothic period. Brief intercalated chapters by J.-J. Marquet de Vasselot on Oriental influences in European art yield in interest to none of the more extensive contributions, but bear a little the look of special pleading. One is hardly ready to concede that a convergence of Sassanid, Tartaric, Gothic, and Coptic influences with just a dash of Hellenic and Roman reminiscence really explains the complex we call the Romanesque.

This dry enumeration of contents and contributors is really necessary to show the thorough and comprehensive nature of this work. It is, within our knowledge, the only general history of Christian art that treats architecture adequately and from the architect's point of view. The writers are consistently alert in noting the real bonds

between the arbitrary classifications of the arts—the give and take, for example, between ivory carving, stone sculpture, mural painting, and illumination is illustrated in a hundred instances. Thus the book becomes a warning against narrow specialization and a lesson in humility. It shows that nothing is surer than that the art historian of a single specialty is a poor historian. To imagine that one knows, say, monumental painting, without some study of such humble matters as ivories and manuscripts, is to be grossly self-deceived. The superiority of much of this work over similar writing in German and English lies in the fact that these French scholars have not been ashamed to practise a wise discursiveness.

We must waive the impossible task of reviewing critically a volume that concentrates the scholarship of ten experts upon the art of twelve centuries. We may, however, add to our special commendation of the chapters of MM. Peraté and Millet a reference to the editorial summing up by M. Michel. He takes middle ground on the Rome-Byzantine controversy, holding that Byzantinism was a preceptorial influence never cordially adopted in the Occident, which most fully realized itself as it Romanized. Against the Orientalizing tendency of most of his contributors M. Michel also takes exception, not being convinced, for example, of the Asiatic origin of barbaric enamel ware. With this brief characterization, and a mere hint at its richness in suggestion, we must leave a work that every serious student of Christian art must read alike for critical orientation and simple delight.

Thirty-three pictures by William M. Chase are on exhibition at the New York School of Art, until December 3. It is a larger collection of Mr. Chase's work than has been put on public view for some time, and including as it does examples of his work through the last twenty years in portraiture, landscape, and still life, it represents excellently the variety of the artist's achievement, and the development of his art. Earliest of all the works is the large "Study in Still Life," which dates back to student days in Munich. From the point of view of anecdote, the most interesting picture is the portrait of Whistler, which Mr. Chase painted in 1885, at the time that Whistler painted the portrait of him. It was this portrait which Whistler, after having first approved, called an "outrageous lampoon." Throughout the portraits, mingling with the manner which is distinctively the artist's own, is apparent the influence of Whistler and Alfred Stevens. The influence of Whistler shows in the Japanese decorative motives, as in "The Open Japanese Book"; in the harmonious arrangements of low-keyed monochromes, as in the "Mrs. C— and Baby"; and in the attitudes of some of the figures. The influence of Stevens, appearing a little later, shows in such pictures as the "Portrait of Miss E—" and "The Music Lesson." The portrait of the late L. F. Roos is exceptional for forcible expression of character. Few of the portraits, indeed, at any period, might be called psychological, but the earlier work caught almost invariably with a distinguished manner the flowering charm of a personality. One gets the impression often that

the artist has felt no vital interest in his subject—that, in his later portraits, especially, he has nothing to say commensurate with his means for saying it. This may account in part for the fact that much of his best later work is in still life, and interiors, of which "The Study in Still Life," No. 1, and "The Green Shade" are excellent examples. In such work as this, where the artist can deal with technical difficulties for their own sake, untrammelled with the problems of portraiture, there is astonishing freshness and finish.

Albert L. Groll is exhibiting at the Schaus galleries, in this city, a number of paintings of Arizona, Mexico, and California. These canvases repeat the scenes and the manner with which he has already made us familiar. Mr. Groll's work shows individuality in its color scheme, which is derived from the yellows and blues of the Arizona deserts and skies, and in the spacious dignity of the composition. A fine and characteristic example of these qualities is "The Land of the Hopi Indian," which shows a depth of yellow plain bounded in the distance by blue mountains and dominated by a vast blue expanse of sky. But many of the canvases show the need of greater harmony of color and refinement of handling.

An interesting exhibition of eighteenth century French art is now open at Ehrich's galleries, in this city. Of the twenty-three canvases, two of the most important fall outside the limits of the eighteenth century—the "Baptism of Jesus," by Nicholas Poussin, and the "Portrait of a Man," by Jean A. D. Ingres. Both are fine examples.

The Boston Miniature Painters have invited the Pennsylvania Society of Miniature Painters, now exhibiting in the Academy in Philadelphia, to exhibit the collection in Boston. The exhibition will be given the first two weeks in December.

Evidence of the increasing importance attached to modern painting, in Great Britain, is furnished by the formation of the Scottish Modern Arts Association. In a preliminary prospectus, signed by Lord Balcarras, Sir Walter Armstrong, Sir Edward Tennant, and other public men, in addition to Sir James Guthrie, and the leading painters of Scotland, it is set forth that "there is not a gallery in Scotland to which the student of art . . . can be referred as containing a permanent collection of work adequately representative of modern Scottish art." The aim of this new body, therefore, will be first to secure year by year worthy works by Scottish artists; and second, as funds permit, to acquire contemporary works, other than Scottish, of outstanding interest.

The fading and peeling frescoes by Morris, Burne-Jones, Rossetti, and others on the walls of the Library of the Oxford Union have been photographed, and the photographs have been published by the Clarendon Press.

The library of the late Gen. Louis Palma di Cesnola, for more than twenty years director of the Metropolitan Museum of Art, will be sold on Monday, Tuesday, and Wednesday, December 3, 4, and 5, by the Merwin-Clayton Sales Co. of this city. Books on art in its broadest sense predominate, including architecture, ceramics, artists and their work, Japan and Japanese

art, catalogues of collections of pictures and books, etc. Among the special works are: Ferratio's "Costume Antico e Moderno," 1829-1834, twenty volumes, folio; the "Florence Gallery," 1789-1807, four volumes, one of the special copies on "papier-velin superfine."

Science.

NATIONAL ACADEMY OF SCIENCES.

BOSTON, November 23.

The autumn meeting of the National Academy of Sciences, held in Boston, November 20, 21, 22, in the new buildings of the Harvard Medical School, was notable in several respects. The presence of thirty-eight out of the one hundred members made an attendance decidedly larger than the average in out-of-Washington meetings, even larger than most of the meetings in Washington, where the business session for the election of new members ordinarily attracts a good attendance. The number of papers was exceptionally large, owing to the addition of eighteen by invited speakers to the twenty-six by members. An exhibit of apparatus and specimens by nearly fifty members and invited associates was held the first afternoon, filling two big laboratories and the adjoining hall; and this, as well as the scientific and public sessions, was attended by an unusual number of interested visitors. The chief reason for all this increase in activity appears to have been the appointment at the last Washington meeting of a committee, with Prof. H. F. Osborn of Columbia as chairman, to prepare a new plan for the autumn meeting; the local committee had only to carry out the plan.

Among the exhibits by guests of the Academy were hybrids of wild and tame guinea pigs, by W. E. Castle, of Harvard, illustrating his experiments in the process of fixing characters in animal breeding; photographs of rill work by T. A. Jaggard, jr., of the Institute of Technology, showing the results of experiments on erosion; zoetrope figures, showing the movement of the stomach and intestines, drawn by W. B. Cannon of the Medical School, from X-ray studies; a new geological map of North America, by Bailey Willis of the United States Geological Survey; a new geological map of Massachusetts, by B. K. Emerson of Amherst; the earliest stages of sexuality in plants, by A. F. Blakeslee of Harvard; examples of ultra-violet photomicrography, by H. C. Ernst of the Medical School. Exhibits by members included recent work of the Harvard College Observatory, by its director, E. C. Pickering; a platinum-lined bomb for experiments at high temperatures and pressures, by A. A. Noyes of the Institute of Technology; restorations of extinct horses, by H. F. Osborn of Columbia; instruments for quantitative research in acoustics, by A. G. Webster of Clark University; plates of fossils from Patagonia, by W. B. Scott of Princeton; a machine for cutting wax-plates, used in constructing models, by E. L. Mark of Harvard; charts of atmospheric nucleation, by C. Barus of Brown; pendulum apparatus for determining the force of gravity, by G. C. Com-

stock of Wisconsin; physical apparatus, by T. W. Richards of Harvard. This list should be more than doubled, to give full indication of the richness and novelty of the exhibit.

The papers presented by guests and members in the scientific sessions of the Academy included the following: "Experiments in Aerodynamics," by A. G. Bell of Washington; "Acoustic Measurements," by A. G. Webster of Clark University; "Continental Sedimentation," by J. Barrell of Yale; "Evidence of Desiccation in Chinese Turkestan," by Ellsworth Huntington of Harvard; "Planetary Inversion, by W. H. Pickering of Harvard College Observatory; "Extent and Structure of the Stellar Universe," by G. C. Comstock of Wisconsin; "Section of American Tertiaries," by H. F. Osborn of Columbia; "Nature and Cause of Old Age," by C. S. Minot of the Medical School; "Ores of the Cobalt-Silver District of Ontario," by C. S. Van Hise of Wisconsin; "Sun Spot Spectra," by G. S. Hale of the Carnegie Solar Observatory; "Reactions of Amphiprurus to Light," by G. H. Parker of Harvard; "Light of Extremely Short Wave Length," by T. Lyman of Harvard. The list of papers was so extended that many were read only by title, and even then there was insufficient time for discussion. The lunches, receptions, and dinners given during the meeting added much to the pleasure of a memorable occasion.

DENATURED ALCOHOL.

The newspapers have printed a great deal about the uses of denatured alcohol for light, and also for fuel, especially in automobiles and other engines. Much has also been said about the possibilities of cheap manufacture from all sorts of farm products, and even from waste, under the law which removes the internal revenue tax after January 1. The alcohol with which we are familiar is one of many. In fact, there is a class of compounds called alcohols, only two of which are commonly known—*ethyl* alcohol (C_2H_5OH), that referred to in ordinary parlance; and *methyl*, or wood alcohol (CH_3OH) which is a poison, with injurious fumes. This fact is illustrated in the dissolving of shellac. At present, on account of the high price of alcohol, wood alcohol is substituted, and its fumes are said to produce ill-effects in the workmen. Ethyl alcohol is the product of yeast cells living at the expense of a special form of sugar—a form which may be produced from different sources. It may be made by a process called "inverting" cane-sugar; by "hydrolyzing"—chemically adding water to starch; by malting grain; or it may grow naturally in fruit juices and saps. Yeast action on sugar from any of these sources produces alcohol and also about six per cent. of other ingredients. The alcohol, whatever the source of sugar, is of the same composition, but the six per cent. of other material gives individuality to the product, according to the origin of the sugar. Thus, rum is the product of yeast action on molasses, while whiskey is obtained from barley or corn. In addition to the above method of making alcohol, there is a possibility of obtaining it from such unpromising substances as coke and other forms of carbon. This process, however,

yet to be worked out industrially by the chemist, would require—under conditions yet to be discovered—something like the production of calcium carbide (CaC_2) from coke; then a conversion to acetylene (C_2H_2); then to ethylene (C_2H_4); and then by a double reaction to ethyl alcohol.

Denatured alcohol, on the other hand, is pure ethyl alcohol, adulterated in accordance with the law. When so adulterated, it is branded "denatured" and is tax free. For many purposes, a disagreeable or poisonous substance added to pure alcohol does no harm and at the same time renders the alcohol unfit for drinking or medicine. For instance, there is camphor in celluloid; therefore alcohol denatured with camphor would not be objectionable in the manufacture of celluloid. The Government has selected certain adulterants and has the alcohol denatured in bond under the supervision of its own agents. Denatured alcohol, unless otherwise specified, must by law contain for every one hundred parts of alcohol ten parts of wood, or methyl alcohol and one-half of one part of benzene. Since these ingredients are not suited to all industrial purposes, the Government when requested will use other substances such as shellac, resins, acetic acid, pyridin, acetone, methyl acetate, aniline dyes, naphthalene, castor oil, carbon bisulphide, and carbolic acid.

The whole subject was considered at the regular meeting of the New York Section of the Society of Chemical Industry last Friday night. Professor C. E. Lucke of Columbia, presented figures obtained from a series of tests which illustrate the comparative efficiency of gasoline and alcohol in internal combustion engines. He concludes that alcohol, although more efficient for motive power, will not compete strongly with gasoline so long as gasoline is as plentiful as it is now. The exception would hold only in regions where there is little gasoline and the conditions for making alcohol are most favorable.

Rambles on the Riviera. By Edouard Strasburger. New York: Charles Scribner's Sons. \$5 net.

The Mediterranean coast of France and of western Italy owes much of its attractiveness to the beauty and variety of its plants. The sunny skies and the fertile soil of that country known as the Riviera, produce vegetation in full splendor. A well-informed botanist would, therefore, be an admirable guide through the region; and just such a person is the author of this book. Professor Strasburger is one of the leading plant-morphologists of Germany, whose contributions to the science have opened new fields of thought. He is a lover of nature, to whom all living things are replete with interest. Moreover, he is uncommonly well read in all such matters as the uses of plants, the myths in regard to them, and the vanishing folk-lore. He lets nothing escape his observation, and yet he does not tire his readers by wearisome display of his multifarious and exact knowledge. As a writer, he is a true impressionist, making sometimes a single line or a touch of color tell a long story. He has imparted to his volume something of the charm which has rendered one of his laboratory manuals so popular, a charm largely due to an offhand, chatty style,

which is at the same time direct. This record, then, is an attractive as well as sound guide-book. The illustrations are well selected, and finely executed in color. Every reader will carry away a considerable amount of trustworthy information, especially concerning the flora. The following passage will indicate the style of the author and show, likewise, the excellence of the translation:

Night is drawing on, and in Mentone lights are beginning to appear in the houses and the streets. The strand is soon picked out with points of light, fringing the sea like a necklace of fiery pearls. The lines of the Mignonied passed through my mind, and the rhythmic washing of the waves seemed to recall the music of Beethoven's beautiful accompaniment. It is significant that those plants, which in this song of Goethe's conjure up in our minds such vivid pictures of Italy, are not indigenous in that land, which has been cultivated for over two thousand years. They came from the East, like all the great ideas on which our culture is founded, and were developed and improved on this classic soil. Italy received the lemon and orange from the Semites, who in their turn had received them from India. The olive, the fig, the vine, and the palm were grown by the Semites long before their cultivation penetrated to the West. The laurel and myrtle indeed are indigenous in Italy, but their use for ceremonial purposes came across the Mediterranean from the East. The home of the cypress is not in Italy, but in the Greek Archipelago, northern Persia, Cilicia, and Lebanon. . . . As though the great impulse given to horticulture by the discovery of America were also destined to leave its imprint upon Italian soil, the agave and opuntias have been established here. Thus the spiny, glaucous agaves and the prickly, vivid-green opuntias, which are so well adapted to the rocky coast of Italy that they seem to have been here from time immemorial, were really not introduced from America until the sixteenth century

The range of subjects treated of is very wide. From prehistoric times down through the golden ages of Greek and Roman culture, to the industries and the thinking of the present, is a long journey, but our author makes it with a cheery step, and with innumerable diversions by the way. We hear the story of the Iron Mask, the legends of certain castles and convents, and the traditions clustering around the villas and villages, as we stroll along admiring or perhaps studying the plants which the author brings constantly to our attention. Before the rambles are over, one has learned much in regard to the great flower-market of the South, the perfume industry, the fruits of the favored land, the factors of landscape, the part which ceremonial plants have played in early and in later times, and so on.

The whole book is written in a kindly spirit, and there are generous words for many people, some of which it would be very pleasant to cite. But we must content ourselves with a single further reference, which brings the treatise very near home:

Besides the Smyrna fig, the best varieties of date palm have lately been introduced into the United States. The United States Department of Agriculture in Washington devotes special attention to work of this kind, and men appointed as "assistants" in the Division of Vegetable Physiology and Pathology, or as "agricultural explorers" in the Bureau of Plant Industry, are entrusted with the carrying out of these experiments. These are scientifically trained botanists, who have first mastered the theoretical part of the subject and still keep up these studies side by side with

their practical work. Two of these "assistants," now usefully employed by the United States Department of Agriculture, studied botany at Bonn, and I have the highest opinion of the indomitable industry and perseverance, the intelligence and patience, of these young scholars. One of these is Walter T. Swingle, who has since been successful in overcoming the obstacles which had hitherto prevented the satisfactory development of the Smyrna fig in the United States, and who has made it possible also to ensure permanent results with the date-palm.

"American Fossil Cycads" is the title of a large quarto by G. R. Wieland of Yale University, published through the Carnegie Institution. This noteworthy contribution to American paleobotany is richly illustrated with fifty plates and 138 text figures. It is an account of the American collections of fossil cycads—plants allied to the fern—so far as they have been studied, and the results of the author's investigations on the vegetative anatomy and reproductive organs, followed by a comparison of these with similar structures in living cycads, and a discussion of relationships. It is probably not generally known that some of the best fossil preservations of these interesting plants are in the United States, particularly in the Black Hills, Wyoming, and Maryland; and that the most important collection of fossil cycads in the world is at Yale University. The living representatives of the cycads are but the remnants of a flora which dominated certain geological periods, and there was at one time an age of cycads (Jurassic) when the earth was covered with forests of these plants as far north as the poles. The ancient types of cycads have then somewhat the same interest for the botanist as some of the contemporary reptilian groups have for the zoölogist. The monograph is creditable to American botany and the presswork of the Carnegie Institution.

The American Eclipse Expedition of 1905, the largest ever fitted out by any nation, is described in the *National Geographic Magazine* for November by its commander, Rear-Admiral C. M. Chester. He pays a cordial tribute to the courtesy of the Spanish authorities as well as to the extraordinarily good conduct of his sailors while on shore. The wonderful remains of Anuradhapura, the famous capital of Ceylon twenty-one centuries ago, are shown in some beautiful pictures with descriptive notes by John M. Abbot, and three old ports on the Spanish Main, Cumana, La Guayra, and Maracaibo, are pictured in a similar manner by George M. L. Brown. The other contents are an illustrated account of Peary's expedition, and President Roosevelt's letter to the Congress of Irrigation Engineers on the two great undertakings of the Reclamation and Forest Services.

On Monday and Tuesday the Anderson Auction Co. of this city will sell the library of the late Elliott Coues, the eminent ornithologist. The scientific portion of the library, mainly ornithological, comprises 369 lots, and includes some rare and valuable books on birds, many being presentation copies. The "Catalogue of Birds in the British Museum," twenty-seven volumes, is an unusual set, and has never before come up for sale at auction in this country. Baird, Brewer, and Ridgway's "North American Birds," three vol-

umes; Cassin's "Birds of California," and "Illustrations of the Nests and Eggs of the Birds of Ohio," by Genevieve E. Jones and Eliza J. Schulze; all with colored plates, are among the more notable works. The miscellaneous library contains some desirable items of Americana, such as the first edition of Patrick Gass's "Journal of Voyages and Travels of a Corps of Discovery Under Capts. Lewis and Clark," Pittsburgh, 1807; D. W. Harmon's "Journal of Voyages and Travels in the Interior of North America," 1820; and Alexander Henry's "Travels and Adventures in Canada," 1809. The hulk of Dr. Coues's scientific and personal correspondence, comprising some 23,000 autograph letters of men of greater or less prominence, will be sold in twenty-three lots, one thousand letters in each. In his later life, Dr. Coues became interested in theosophy and kindred subjects, and received a number of autograph letters from Madame Blavatsky.

Finance.

A RAILWAY REPORT IN "BOOM TIMES."

Annual reports of railways are likely to be regarded, by people not concerned with transportation or with the investment markets, as dry and dull. On occasions, however, they are eloquent as a reflection of material conditions in a particular region or in the country as a whole. The report of the Union Pacific Railway, published Tuesday, is a striking instance of this sort. In October, 1893, when the shock of financial panic was beginning to subside, the Union Pacific was unable to meet its obligations. It was placed in receivers' hands, and did not emerge from bankruptcy until July, 1897. Even then, it was restored to solvency only after the old stockholders had paid a cash assessment of \$9,000,000, and the old mortgages had been scaled down, in interest or principal, on condition of a "bonus" in new stock.

At the time of its collapse, Union Pacific relied for income on a community that was itself on the verge of insolvency. The railway traversed Kansas and Nebraska—States where the fall in wheat had impoverished the farmers, at a moment when forced calling of loans by Eastern markets had confronted the same farmers with disaster; it also crossed Colorado, where the silver-mining industry was shutting down. The political revolt of the section, instanced by the fact that both Kansas and Colorado voted for a Populist as President in 1892, only reflected the agricultural and industrial distress. In 1893, Union Pacific's net earnings from its traffic decreased 30 per cent. from 1892, and it fell \$2,500,000 short of earning its fixed charges. At that time there was a widespread belief that the communities in question were industrial wrecks, and that both grain-growing and silver-mining were destined to be unprofitable.

The recovery of that region from its depression and discouragement is one of the most dramatic stories in financial history. Before election day in 1896, India's wheat crop of that season failed, and American wheat, which the Bryan campaigners had declared could never, under the gold stan-

dard, rise in price again, once more sold at a dollar a bushel. Less than a twelvemonth after the 1896 election, shortage in all of Europe's crops, coinciding with an abundant American harvest, gave Kansas and Nebraska farmers the most profitable season since 1879. Debits were paid off; industry revived; bank balances accumulated. The revival did not stop with foreign crop shortages. As prosperity returned to American industry in general, one of its most striking results was a greatly increased demand for agricultural products. A series of almost unprecedentedly large harvests, sold at highly remunerative prices, so far enriched the crop-growing States that, in place of the story of "Eastern capital loaned in the West," we began to hear of "Western bank funds outstanding on Wall Street." Such "interior loans," these last few years, are believed to have run above the one-hundred-million figure.

The reorganized Union Pacific began to pay dividends on its new preferred stock in 1898, and resumed dividends on the common stock in 1900. Its net receipts from transportation, which were \$5,602,000 in the first year after its reorganization of 1897, had risen to \$17,767,000 in 1900, and in the fiscal year ending June 30, 1906, are now shown to have been \$30,317,000. In place of the bankrupt treasury of ten years ago, the current annual report makes the remarkable showing, along with other assets, of \$21,258,000 cash on hand or in bank, and of \$34,716,000 lent out on call in the money market.

The Union Pacific is not alone among railway companies in evidencing by such extraordinary figures the change in the country's position. Its case is peculiarly interesting, because its recovery from complete insolvency to possession of wealth not dreamed of by any railway a dozen years ago, is typical of the spectacular change in the community which it serves. This chapter of history, both of the railway and of the region from which it draws its prosperity, adds point to the comment frequently made by foreign observers, on the remarkable extremes reached in the upward and downward swings of American prosperity. Naturally, such an episode sometimes prompts the thoughtful to curious conjecture as to the next chapter.

BOOKS OF THE WEEK.

Baldwin, May. Peg's Adventures in Paris. Dutton. \$1.50.
 Baldwin, May. That Little Lamb. Philadelphia: George W. Jacobs & Co.
 Barrett, Alfred Wilson. Father Pink. Boston: Small, Maynard & Co. \$1.50.

The Nation.

NEW YORK, THURSDAY, DECEMBER 6, 1906.

The Week.

No one calls this an era of good feeling, politically speaking, yet it has proved nearly or quite the best year in this country's history for those who appeal for votes on the ground that there is nothing to choose between Democrats and Republicans. The minor parties, which do not learn their standing and successes until the curiosity of every one else is satisfied, are only now celebrating their triumphs in the recent election. We have heard but little from the Populists, to be sure, but the publications of Socialists and Prohibitionists are full of cheering news. Such phrases as "100 per cent. gain," "200 per cent. gain," "300 per cent. gain," are scattered liberally through their organs. Instead of a dispersed vote, of no importance anywhere, the minor parties now seem able, by vigorous campaigning with good candidates, to cut pretty deep into the solid party votes. The same growth of independent sentiment which made the voters discriminate between Hughes and his colleagues in this State, or between Johnson and his in Minnesota, has weakened greatly the force of blind partisan loyalty against which the independent or third-party candidate always had to contend. The immediate result is that our legislatures are ceasing to represent only two parties. Out of all the legislatures chosen in 1904, the Populists had 2 members in Alabama, the Prohibitionists 2 in Illinois, and the Socialists 5 in Wisconsin. The Socialists have increased their legislative membership in Wisconsin, and elected for the first time members in Illinois, Florida, and virtually in Pennsylvania, where two candidates of the Federation of Miners have been sent to Harrisburg. The Prohibitionists have gained three members in Minnesota, one in West Virginia, and at least one additional in Illinois (where the cumulative system of voting improves the chances of third candidates). A Prohibition nominee with Republican endorsement was elected in New York, and one with Democratic endorsement in Massachusetts. Thus, however slight the influence such scattered fighters may be able to wield, the reforms for which they stand will at least cease to be voiceless.

The postal service has always been in this country the standard example of Government ownership and operation. On the one side, its low rates are contrasted with the high rates of the express companies; on the other, its re-

curring annual deficit is pointed to as conclusive evidence that a private corporation could do the work better. Last week, a group of Chicago capitalists actually made the formal offer before the Congressional commission to take over the Post Office bodily. The private firm professes itself willing to cut first and second-class rates in half, giving penny letter-postage, yet at these figures to wipe out the deficit, make 7 per cent. profit for the company itself, and turn all receipts above that rate into the Treasury. What has the Department itself to offer by way of alternative? Well, the most concrete proposal at present seems to be that of Third Assistant Postmaster-General Madden, to the effect that the rate on periodicals be raised from one to four cents a pound. Beyond the quadrupling of this single rate, against which convincing arguments can certainly be urged, there are no innovations in sight. Probably a well-managed corporation could bring about an equilibrium between receipts and expenses, with the present extent of the service. But the publicly managed Post Office attained this equilibrium in the eighties, before rural free delivery was invented. If it had not been for that innovation, there would have been no deficit, as careful computations show, for three years past. Neither rural delivery nor the low second-class rate was originally adopted as a pure business proposition. Congress regarded both as measures of general public good. We do not suppose for an instant that Congress will give such a stupendous contract to any private interest. But the incident ought to have a wholesome effect notwithstanding. This year's deficit is four million dollars less than last year's. There are ten millions more to be saved. What would happen if the railway contracts were scrutinized as microscopically as the second-class list?

Rear-Admiral G. A. Converse's proposal to remove the marines from our men-of-war will renew an old and bitter controversy. For years before the war with Spain the navy was divided into two camps—those who favored the retention of the marines on ships, and those who wished them removed. The leaders of the latter faction were the then younger officers, headed by Lieutenant (now Commander) Bradley A. Fiske. The war in Cuba and the Philippines, resulting as it did in the enlargement of the Marine Corps, and in the increased activity of the navy, ended the controversy temporarily. The marines are an exceptionally fine and an ably-officered body of men. Their presence on warships is, however, a survival of the days when the sailors were

the scum of the earth, impressed men, ex-convicts, and gutter-snipes generally. A strong and well-disciplined guard was then necessary to prevent mutiny and disorder. The modern sailor resents having a guard over him, and this part of the marine's work is now of so little importance that he is used to man a gun, just like the bluejacket. For landing parties and quick service like that in Cuba recently, the marines are still of great value, as they are a very mobile body.

The Standard Oil Company's appeal *ad misericordiam* is comic, bathetic, or exasperating—according as one takes it. That this overgrown corporation should fall a-whimpering when it is spanked, speaks more for the power of public opinion than for the power of reason in its managers. What they say about the extent and importance of their export trade, and of the competition they have to meet abroad, is perfectly true; but if they imagine that considerations of that kind will make people overlook what they have done at home, they evidently have not the faintest notion of the popular odium under which they rest, or of the public with which they have to deal. To beg for support as a great patriotic institution, is not only impudent, even for the Standard Oil, but wholly aside from the real point at issue. That is merely whether these supplicating gentlemen are or are not law-breakers. Detailed charges that they have repeatedly and knowingly violated the statutes have been officially made against them, and suits are now pending in the courts to determine whether they are criminals. Until that question is decided, we think their confidences had better be confined to their lawyers, and that their begging for mercy should be reserved for the judge, and not wasted upon a distinctly cold public.

"It is a murder trial solely and simply," says Gov. Gooding of Idaho regarding the approaching trial of certain officers of the Western Federation of Miners, for complicity in the murder of ex-Gov. Steunenberg. Now that the Supreme Court has disposed of the allegation that the extradition of the men was illegal, there is no excuse for making it appear anything but a trial of individuals for a definite crime. A few months ago in this city some thousands of Socialists were marching under red flags and transparencies to protest against the "railroading" and attempted "murder" of Moyer, Haywood, and Pettibone. The highest court of the land has now held that the method by which the accused men were brought from

Colorado to Idaho was legitimate. It remains for the authorities of the latter State to carry out their admirable determination, "that the men accused of the murder of ex-Gov. Steunenberg should have a fair and impartial trial before the best and squarest jury that Idaho could produce; that they should be completely cleared if innocent, and hanged by the neck until dead if guilty." There undoubtedly exists in the mining States a hostile sentiment quite as unreasoning and as little entitled to respect as that of the agitators who cried "judicial murder" half a year before the trial was set. But Idaho has such a chance as seldom comes to any commonwealth for impressing the lesson that the law is above any special interest, whether of capital or labor.

The trial of Cornelius P. Shea, the head of the Chicago Teamsters' Union, who was able to paralyze the business of that city last winter and fill its streets with rioters, should be overlooked by no student of labor unions. The Garment Workers' Union, having a little strike of its own on hand, wanted aid. According to the testimony of Albert Young, who has turned State's evidence, the agent of the Garment Workers distributed \$1,500 among six leaders of the teamsters, for the purpose of "buying a strike" of their men. Young was not very enthusiastic over this, because the teamsters were getting on well with their employers, had no complaints, and "ought not to get into trouble." But the \$1,500 did its work. Out of "sympathy" for the down-trodden garment workers, the teamsters struck—with what consequences for the city our readers may remember. Hundreds of thousands of dollars were lost to employers who could not move their goods, and to employees thrown out of work—merely in order that Shea and his followers might each put less than \$300 into his pocket. This sordid story could be duplicated in many sections of the country. Such crookedness damages the cause of labor unions more than all the machinations of capital.

Richard Olney has an article in the *Inter-Nation* welcoming the advent of organized labor in politics. What is plainly in the mind of this old-fashioned Democrat, is an acute realization of the peril lest our system of government, and the American ideals underlying it, be harmfully modified. He dreads the gradual disappearance of equality before the law. The mounting arrogance of special privilege is as alarming to him as it is hateful; and he looks about for some political force which may be powerful enough to stay these evil tendencies. Mr. Olney enumerates the ends for which organized labor ought to strive in politics. They are worthy ends

—equal opportunity for all men; no taxes laid to enrich particular classes; opposition to graft and extravagance, however disguised; the abolition of paternalism in government. It is undeniably true that labor unions, like all other associations of citizens, ought to contend mightily for these political principles. But can Mr. Olney open his eyes and look full at organized labor as we know it and still say that he perceives any such motives operative? He has only to read the official programme of the Federation of Labor to discover that what we have in trades unions in politics is only another class seeking special privileges. Nothing that the beneficiaries of protection ever asked, or that a moneyed oligarchy, thinking itself in control of government, ever greedily sought, is more grossly selfish, or discriminates more sharply against outsiders, than the avowed aims of trades unions. Labor leaders are not so much concerned to do away with the oppression by the tariff, as to win the legal power to do some oppressing on their own account. This is not strange. The protective system is bound to bring forth its perfect work in thus drugging the public conscience. When men are long accustomed to seeing a certain class empowered to tax their fellows, under the guise of protection, it is not surprising that they prick up their ears and set about getting their share of the plunder. Instead of correcting the abuses of special legislation, labor unions, taking to vote solidly, would only extend and heighten them. "They do not know men," said Burke of certain political philosophers of his day. We fear that it must be said of Mr. Olney that his idealistic article shows that he does not know labor leaders.

We note with pleasure the formation in Atlanta of a "Christian League" for preventing further mob outbreaks and aiding in the solution of the race problem. It is being organized by the Atlanta Business Men's Gospel Union, of which ex-Gov. W. J. Northen is president, in cooperation with the ministers of the city; and it is noteworthy that members of both races are asked to join. Its members are expected to "constitute themselves a sort of Southern legion of honor, hoping to be more powerful in preserving patriotism and high morality than all laws or law officers." If this sounds somewhat extravagant, the fundamental idea is one that cannot be too highly commended. Why there should not be a "steering committee" in each town and city, composed of the best and broadest of both races, has long puzzled the outside observer. Such committees could accomplish much in preserving the peace and in uplifting the negroes. The white members would find the colored ones ever ready to re-

spond to wise leadership and anxious to control and punish the criminal blacks.

Gross receipts of \$127,559.40 in 1905—these indicate what a business Harvard athletics have become. Football is, of course, the great money-maker, the receipts from that sport being \$85,353.66, "breaking all records" by \$17,000. Significantly, the expenses of training the team also increased from \$10,000 to nearly \$30,000—the latter sum being required to train forty or fifty men for a period of eight weeks, and pay salaries to trainers during the rest of the year. It must not be forgotten, however, that both this season and last the graduates were called upon to contribute to the salary and expenses of the head coach, whose dismal failure at New Haven is now a matter of record. Plainly, the itemizing of the \$30,000 expenses is something to be studied with care. The net football earnings last year were \$55,000, and of this sum \$27,000 was utilized to make good the deficits in other branches of athletics. Obviously, the English and the West Point custom of taking no gate-money for amateur matches, if introduced at Harvard, would necessitate a complete overhauling of our athletic methods. Yet we believe that the more publicity is given to the annual financial statements of our colleges, the more people will favor the adoption of the English system. The anomaly of a football team earning \$55,000, when the public and graduates are being urged to give money to meet legitimate university expenses, affords ground for thought—and action.

The new director of the German Colonial Department has found a novel use for African dependencies. The following is from the report of Herr Dernburg's maiden speech in the Reichstag: "Rebellious natives, though he regretted to have to make the assertion, had one advantage; namely, that of developing firmness of character in the colonists." In other words, if German Southwest Africa is a bit too arid to produce anything worth exporting, and a bit too hot to support a European farming population worth speaking of, it is nevertheless inhabited by a number of sturdy, fighting tribes, whose activities serve to make the colony an admirable field for nurturing in the German immigrants those military virtues which prolonged peace in Europe may have tended to weaken. It is a pity that this pedagogical theory of colonization was not explained to the Herero insurgents about a year ago. If they had been made aware that continued resistance on their part only served to emphasize the qualities of courage, initiative, and swiftness of action in one of the *Kultur* nations of Europe, they would not have interrupt-

ed the good work by surrendering inconsiderately after losing only 55,000 out of 60,000 souls.

News of the strife in Prussian Poland over the enforced use of German in the public schools, points to a growing restlessness among the minor Slav peoples of central and southern Europe, who have apparently succumbed to the violent epidemic of political megalomania now sweeping the globe. Pan-Americanism, Pan-Germanism, Pan-Islamism, Pan-Ethiopianism—we seem to be on the verge of Pan-everythingism. Greater Britain, Greater Scandinavia, and Italia Irredenta, face almost their burlesque in the demand for a Greater Serbia or a Greater Croatia. It is true that the weak peoples are herein acting in no spirit of mimicry, but rather under compulsion through the advance of the giant races that threaten to engulf them. The movement for a Greater Moravia is essentially a reply to Pan-Germanism, as the movement for a Greater Illyria is the reply to wide schemes of Magyar ambition. To compass these programmes would only result in a patchwork map as crazy as that of the ancient Germanic empire. The influences that have encouraged the present striving among the minor races of Austria-Hungary and elsewhere have come primarily from Russia. The great lesson of the Russian revolution for the inferior races of Europe is that constant struggle for the preservation of national identity, no matter how seemingly hopeless, is justified because of the possibility of a political cataclysm that may make the dominant sovereign of to-day helpless to-morrow. Who would have ventured to predict, three years ago, the chance of dissolution threatening the huge mass of the Russian Empire, or greater liberties for the Armenians or the Jews, or a self-governing Poland? Yet a Russia reorganized as a federation of autonomous states is not beyond the possibilities of the near future. Indeed, federalism as the solution of the racial problem in Europe may prove to be the great contribution of the Russian revolution to the West as democracy was of the French revolution.

France and Germany, jealous and opposed in so many respects, are in unison at least in the matter of due protection of literary property. The agreement of 1883 between them has now been amended, extending the period during which an author may control the right of translation. Formerly, it was only ten years; hereafter, it is to run as long as the copyright. The new rule is to go into force with the meeting of the Berne Convention, two years from now. To that Convention nearly all civilized countries now subscribe, except

the United States. Our Government would like to do so, but a higher power—namely, the Typographical Union—prevents it. Rumania is also a nation that has not yet adhered to the Berne Convention for the international protection of literary and artistic property. But she appears to be preparing to align herself with England, France, and Germany, thus making the American isolation in literary barbarism the more pronounced. The Congress of Literary Property recently met at Bucharest, and the signs are reported to be flattering that the Rumanian Government will soon be found among the Berne signatories.

Norway is soon to rank with Belgium and Switzerland as a neutralized state, with its independence and integrity guaranteed by the Powers. While the tendency, nowadays, is to regard the neutrality of such states, in case of a great European war, with a good deal of skepticism, they nevertheless have a certain demonstrable value in times of peace as virtual little museums or laboratories of statecraft, where new political ideas may be tried out and exhibited under special circumstances, on the chance that they may prove acceptable to the more powerful governments. Switzerland, of course, is the classic home of the referendum, and Belgium has demonstrated the fairness and practicability of proportional representation so successfully as to make the adoption of the system in the new Transvaal Constitution a possibility. So, too, the cause of international peace may draw appreciable profit from these small buffer states, as examples of prosperity and content without the drawback of militarism.

Faced by the possibility of a madman on the throne in the person of the present Crown Prince, Servian politicians and military leaders are reported to be planning the overthrow of the Karagevitch dynasty and the substitution of a member of some sovereign German house. Palace murders, pretorian elections, and a royal blood tainted with madness, yield a startling parallel between Imperial Rome and the little Slav Kingdom. The situation also emphasizes the swift pace of modern life even in so remote a corner of Europe. It took the Bavarian house of Wittelsbach a thousand years to spend itself in a succession of insane kings; and the misfortunes of the Hapsburgs are accounted for by an equally long period of sovereign power and interbreeding. But from the outlawed Black George who made an independent Serbia, to the son of Peter I., is just three generations; while only two generations intervened between the founder of the rival line, Milosh Obrenovitch, and his impossible

grand-nephew, Milan I. In the meanwhile, it would appear that the poor younger sons of German princely houses are truly blessed, for in the course of time they are bound to inherit the Balkans.

News of the discovery of manuscripts in Central Asia, at least one in an unknown tongue, raises some hope of solving the great historical riddle of the Tartar Empire. We have reason to suppose that in high antiquity Central Asia was dominated by a Tartar race of considerable civilization. Sven Hedin and other travellers have found great cities half-buried in the sands of Turkestan, relics, apparently, of the race that overran Russia and actually conquered China; but so far we are quite without literary documents of these people, being dependent for their history on the testimony of their enemies. We seem to trace their influence in the designs on textiles and ceramics in Central and Western Asia; but such evidence is naturally of a slight and dubious kind. It has been hoped that the Pumpelly expedition would throw some light on these matters, but so far preliminary surveys have revealed chiefly the remains of very primitive peoples. If a German scholar is indeed to bring us information on the early history of the Tartars, it will be a sort of compensation for the havoc that German aniline factories are working in the splendid rugs of the Turcoman region.

Lovers of the picturesque should welcome the news of the abandonment of St. Helena by its British garrison. The greater part of the inhabitants, numbering some 3,500, will probably emigrate, since there are practically no industries on the island. This is as it should be. It was always an anomaly to think of St. Helena as an island like any other island in the gazetteer, with a population, and exports and imports, and savings banks, and possibly even a race-suicide problem. Deserted, it becomes a monument and assumes its proper sublimity as the rock on which Great Britain chained the Promethews of European democracy. It is no doubt a pity that some thousands of peaceful natives should suddenly be deprived of all means of livelihood and be compelled to seek their fortune elsewhere; but a thousand lives or so are not a large item in the total bill of Napoleonic glory. As a matter of fact, the poorest among the inhabitants, who are a mixture of white, negro, and Chinese blood, will probably remain on the island scratching some sort of living out of the volcanic soil. Clambering over the site of Longwood, they will only add to the picture by enacting the part of the Bedouin tethering his horse in the ruins of Baalbec.

THE PRESIDENT'S MESSAGE.

The President's Message is so long that few people will read it through. We cannot but regard a less lengthy document, which deals with a few important subjects, as far more effective. Such a Message—like Cleveland's famous deliverance on tariff revision—concentrates public attention and thus, indirectly at least, spurs Congress to move along the desired lines.

On two matters of actually pending legislation, the President speaks briefly. A bill to prohibit corporations from making political contributions has already passed one house of Congress. Mr. Roosevelt urges its final enactment. He might have referred with regret to the scandalous diversion of the money of policyholders in aid of his own election; but he has, at any rate, recommended a wholesome and needed law. Congress should give heed. Another bill, that for shipping subsidies, has gone through the Senate and is now before the House, and the President was expected to bestow upon it his blessing. But it is only half-hearted support which he accords this measure. He thinks that something ought to be done for our merchant marine; admits that preceding subsidy bills have been "objectionable"; declares that the pending bill is "as nearly unobjectionable as any can be"; but goes on to say that "if it prove impracticable" to pass it, he hopes that, at least, provision will be made for better communication with South America. This is too plain a preparation of a line of retreat to promise hard fighting. It goes with Mr. Roosevelt's description of himself some time back as "not much of a subsidy man." His failure now to make a "ringing" appeal for the bill will put heart into its opponents, and we hope foreshadows its defeat.

Two aspects of race prejudice the President discusses at much length. With most of what he says on lynching (almost wholly a race question) we thoroughly agree, and his appeal for equal opportunities for blacks and whites, in the schools and in the trades, is manly and truly democratic. Turning to our treatment of the Japanese, the President uses great plainness of speech in denouncing anything like discrimination against them. His recommendation that the Japanese who desire it be allowed to become naturalized American citizens will not be popular on the Pacific Slope; but international decency will remain international decency, and President Roosevelt deserves high praise for exalting it as he has done.

The chief interest of his message lies, however, in his discussion of the courts and injunctions; his new plans for control of corporations by license, or otherwise; and, above all, his coming out for a graduated inheritance tax and a graduated income tax. These tax laws he does

not urge Congress to enact; they are for the "future"; and the reasons for presenting these projects to Congress at the beginning of a short and crowded session are not apparent. Nor does the President urge his proposals for taxation as a means of raising revenue. Had he spoken out for the abolition of inequitable and oppressive tariff taxes, and then proposed these other taxes in order to provide the needed revenue, the scheme would have worn a different air. Whatever may be the Constitutional and other difficulties in the way of a graduated income tax, there is much to be said in favor of a graduated inheritance tax. Economists whose orthodoxy is unquestioned have approved this device. But they have approved it as a means for securing the money to carry on government. President Roosevelt emphatically bases his argument on another principle—his desire to reduce "swollen fortunes" and to promote a greater equality between the classes. We are not advocates either of swollen fortunes or inequality, but we do not believe that under our democratic polity the Government may safely attempt the regulation of this matter. We would have the laws against oppression by combinations of capital severe and severely enforced. We think imprisonment rather than mere fines the proper penalty for officers of corporations which defy the law. But, with full realization of the perils of capitalism, we cannot look with anything but dread upon attempts to limit the size of fortunes honestly acquired. That way danger lies.

The President is firmly convinced that he is a moderate man. He professes great abhorrence for "sinister demagogues." They are almost as hateful to him as "ultra-conservatives." He is the safe man of the middle course. His radicalism is of the sort necessary to preserve the Government. The benevolence of his intentions is, we grant, beyond question. Yet the good will of a President and the amiability of a Legislature are no warrant for an innovation that smacks not of the freedom and individualism of our political system, but of meddling paternalism.

THE NEXT WAR.

Japan has suddenly taken the place of Germany as the country that "we must fight next." Of course, we have got to fight somebody. That is one of the fixed points. To let our navy rust unused would be sinful—a manifest impairment of the vested rights of our shipbuilders. Besides, some nation or other is always getting too insolent, and needs to have its comb cut. Seven years ago, the swaggerer that it was our bounden duty to trim was Germany. Admiral Dewey himself had said it; and every grocery-store oracle could explain to you just why it was necessary for the Unit-

ed States to teach the Germans better manners. But that watched war has not boiled; and now we discover all at once that the great fight is to occur in another quarter. Japan, *voilà l'ennemi!* Such is to-day the watchword of the bellicose Washington correspondents. And every American official returning from the Orient is gloomily convinced that they are right.

To their godlike reason, looking before and after, the skies are filled with portents. The clash with the Japanese in California is only a minor incident. A race-struggle and a world-conflict are before us, if we may believe the prophetic imaginations of these young diviners of the newspapers. Is not the President visibly troubled? Then there is Secretary Root busily looking up precedents; while the Army and Navy Club is already deciding where the Japanese army of invasion will attempt to make a landing, and where the tremendous battle will be fought between the two fleets. And as for the bearing of the Panama Canal upon all this, any tyro can show that it is absolutely necessary to finish the canal before the Japanese move against us, and that at the same time it is absolutely certain that they will strike before we have got it finished. At present, says the *Paris Matin*, the Pacific Coast is "at the mercy of a Japanese surprise," so how can we expect the Japanese General Staff to be so stupid as to wait till we get them on the hip with our canal?

We have scarcely exaggerated, in the foregoing, the kind of talk which one sees more and more frequently in the press, and hears with increasing frequency in private conversation. Much of it, no doubt, is idle gossip—the sort of stuff that is all the while being invented to fill an empty column or a vacant mind. But it has a serious aspect. It betrays a misdirected and even dangerous mental habit. If a people is continually to echo Hamlet's estimate of bloody thoughts as the only ones of worth, from this time forth, the likelihood of bloody deeds following is inevitably strengthened. For a great industrial democracy to make war its preoccupation is not only absurd, but well-nigh criminal. Where the heart is, there will the treasure be also. Why should we think it necessary to fight anybody "next"? The steady ongoing of peace ought to be as much the basis of our hopes and calculations as is, to the farmer, the march of the seasons. War talk, even when there is actual danger of conflict, is usually a needless inflammation; in time of assured peace, it is nothing less than incendiary.

It would certainly be a portentous thing if the *ultima ratio* of kings should become the first resort of democracies. Yet to such a result does all this rash and premature muttering about going to war surely tend. Patient investigation

and honorable adjustment will come to be regarded as too slow and irksome. In the present friction with Japan, for example, there is not a particle of reason for supposing that the matter cannot and will not be peacefully and satisfactorily arranged. It is no occasion to complain that the Japanese are "cocky." If they are, we do not know what would be the proper adjective to describe the Californians in their dealings with the emigrants from Japan. What is certain is that the Government of Japan is asking only what she is entitled to as a nation with an assured rank now among the great Powers, and what she at least may assert as a *prima-facie* right under her treaty with us. It is clear, too, that Secretary Root is bent on doing all that he can to settle the difficulty in a way to redound to the honor and sense of justice of both countries. Under these circumstances, the duty of real patriots is to uphold the efforts of the Administration to arrive at a peaceful solution, and not to go about predicting war and bragging of the way in which we are going to whip the Japanese.

No one has advanced a single credible reason why the Japanese should want a war with the United States. Japan has all she can do to stagger under the burdens of her war with Russia. In the way of expansion and chances for her commerce, she has all that she can at present desire in Korea and Manchuria. On our side, we are under heavy bonds to keep the peace. Our presence in the Philippines makes it imperative, as Congressman McCall has again pointed out in the *Atlantic*, for us to avoid a conflict with Japan, since we should lose those islands at the outbreak of hostilities. But all military and Imperialistic questions aside, our responsibilities and opportunities as the leading republic of the world put their veto upon such a war. We could wish that they also stopped silly talk about it.

THE HOUSE OF LORDS.

Sir Henry Campbell-Bannerman scarcely exaggerated when he declared recently that the Lords had made of the Education Bill a "travesty" of the measure which was passed by the Commons. That the Peers would alter the bill in some particulars was fully expected; that they have made havoc with it, in the face of numerous warnings, has enraged the National Liberal Federation. The Archbishop of Canterbury admits that the Lords have gone "too far," and intimates that the time for haggling is at hand. Meanwhile, the situation has revived the old discussion whether the House of Lords should not be abolished. It is a great opportunity for the Radicals; indeed, Mr. Lloyd-George has been stumping the country for months, declaring that the upper house should be

thrown on the political scrap heap as soon as possible.

That any radical action will result from the opposition of the Lords is not at all likely. The Premier is determined that there shall be no tampering with the main principles of the bill, and insists that a way can be found to make the wishes of the country prevail. But that does not mean that the House of Lords will be done away with overnight. Lord Rosebery once said that "it must mend or end," and there are plenty of ways of mending it or of forcing it to yield to the will of the people, before abolition need be considered seriously. Moreover, this talk of abolishing an upper house is not always confined to England. There have been times in this country, notably when the Senate was so slow in repealing the Sherman Silver-Purchase Act in 1893, when there were loud calls for its extinction. Undeniably, however, there has been a steady growth of feeling in England against the Lords. This is largely based upon its general ineffectiveness. Yet thousands upon thousands of middle-class Englishmen fairly blessed the Peers when they put an end to Gladstone's Home Rule bill. Then faults were speedily forgotten, and the House of Lords appeared the saviour of the nation which the traitor Gladstone wished to dismember. A similar change of sentiment has been observed in the United States when the Senate rejects hasty and ill-considered legislation sent to it by the representatives.

Had Mr. Gladstone desired to abolish the House of Lords, 1893, when the second Home Rule bill was defeated, was the right time. Yet the Liberal Government not only declined to lead a crusade against the upper chamber, but even failed to avail itself of the opportunity to force measures through by the same means which carried the Reform bill of 1832—the creation of a large number of Liberal Peers pledged to vote for the desired legislation. This recourse was easier in 1832, when there were less than 400 lay and spiritual Lords, than to-day, when there are over 600. Indeed, if the present Prime Minister were desirous of packing the House, he would have to induce the King to create more than one hundred Liberal Peers. The threat of such action would undeniably influence the Peers not a little; for the older nobility is by no means desirous of having the aristocracy further enlarged. The use of such a threat has, moreover, always been held legitimate in bludgeoning the Lords.

Aside from those who, like John Burns and Mr. Lloyd-George, insist upon abolition as the only remedy, many persons offer plans for improving the procedure and membership, before destroying a body which, they maintain, can be made a valuable check upon the Com-

mons. Take the Trades Disputes bill, awaiting action by the Lords. Thousands of Liberals, otherwise in sympathy with the Government, earnestly hope that the Lords will defeat a measure which makes of the trades unions a privileged class in the eyes of the law. These remonstrants recall Oliver Cromwell's words: "I would not undertake such a Government as this unless there might be some other persons that might interpose between me and the House of Commons, who had the power to prevent tumultuary and popular spirits." They remember, too, that no Constitutional writer of any standing has asserted that Great Britain or its colonies can safely be governed by a single Chamber.

As a writer in the *Nineteenth Century* has pointed out, the Conservatives themselves have several times moved in the direction of reforming the Lords. In 1887, Sir Michael Hicks-Beach urged a "wise and careful change," which should give the Peers "greater popular authority and weight" than they possess. He wished the Lords to purge themselves of their black sheep, and suggested the awarding of life peerages, similar to those now held by lawyers and bishops, to able laymen. W. H. Smith, long the Conservative leader of the House, was then certain that a reform must speedily come from the Conservative party and the Lords themselves. In accordance with this view, Lord Salisbury in 1888 introduced a bill for the creation of life peerages and the elimination of disreputables. He had twenty years previously declared that it was the duty of the Lords to yield whenever "the opinion of your fellow-countrymen has declared itself, and you see that their convictions—their firm, deliberate, sustained convictions—are in favor of any course." Otherwise, he added, "the machinery of government could not be carried on." If public opinion is outspoken enough now, the House of Lords will yield. If not, Sir Henry Campbell-Bannerman may seize this occasion to insist upon changes which shall make the Lords a really responsible and hard-working legislative body.

THE KÖPENICK CAPTAIN.

Wilhelm Voigt, the renowned "Captain von Köpenick," has done much more than give all Germany the heartiest laugh of a generation. It was not because of his impudence and daring that the press persistently refused to regard him as an ordinary malefactor, and that his mild sentence of four years has pleased the public. Gifts of money and clothes, the promise of an annuity, and offers of aid of one kind or another, have poured in on him from all over Europe; his achievements have already been dramatized, and, until the police interfered, Germany was deluged with

picture post-cards celebrating his feats. Yet none of these things can be accredited to love of the startling, or to the German sense of the humorous. There is a deeper reason. It is as an unwitting protest against police tyranny and militarism run mad that Voigt's spectacular impersonation has struck home with the masses.

Badgered as they are by iron-handed authority, the people openly rejoiced that the laugh was on those whom they too often regard as their natural enemies. And when the criminal was, by the merest accident, captured, the story of his life made him friends wherever it was told. He had gone wrong when very young and forged a postal order; for this act he served no less than ten years. Coming out of prison helpless and friendless, always under police surveillance, he was next caught in an attempt to rob the strong-box of a court. He and his accomplices were armed when taken, but made no use of their weapons; they had hardly begun the breaking and entering when arrested; yet his sentence was fifteen years. That this was barbarous injustice Voigt has insisted since his arrest, with the newspapers agreeing. Moreover, when he complained of this wrong at his trial, the court went out of its way to confirm his assertion that the sentence was indefensible, and that he had been illegally deprived of the right of appeal.

But the folly of the state did not end there. Serving his full fifteen years, Voigt left jail determined to lead an honest life. He settled first in one town, then in another. In one he plied his shoemaker's trade diligently, and established an excellent business. And then the police ordered him to move on. Wherever he stopped, the result was the same: the police demanded his papers, found him to be a jail-bird, and compelled him to go elsewhere. With the authorities apparently bent on making it impossible for him to be decent, he hid himself in Berlin and thought out, by himself, a plot which shows that under more favorable circumstances he might have been a man of force, with an honorable career. It is this phase of Voigt's story which has stirred all Germany, this revelation that the police would make a man once a criminal always a criminal. The passport system—advocated by Senator Tillman and others for Southern negro criminals since the Atlanta riots—stands revealed as a method of placing a man's destinies absolutely in the hands of the police. They decide where he shall live and whether he shall have a chance to rehabilitate himself.

Naturally, Voigt's biography has brought out other stories of injustice. A man caught in the act of stealing a pair of slippers was thrashed by the owner and allowed to go. But a policeman who witnessed the affair saw to it that the

culprit received eight years at hard labor. Plainly, the German criminal code—indeed, the whole attitude of the Government toward the criminal—calls for a complete overhauling. The newspapers and individuals who are urging reform are naturally grateful to the Captain von Köpenick; his feat has called public attention to abuses which might otherwise have lacked publicity for years to come. Capt. Dreyfus's martyrdom accomplished much for the reform of French military procedure; the Captain von Köpenick may achieve in the history of German penology a similarly honorable position. Wherever his story is read, it should prompt people to ask whether modern humanitarian methods determine their country's treatment of all offenders.

As for the military side of the incident—the German uniform has been of late years a modern form of Gessler's hat, before which all must bow down. Army officers have ever been a privileged class; but their privileges have never ranked more than to-day, thanks largely to the propaganda of the Socialists. So much toadying to the war-lords has made possible the spectacle of a physically broken ex-convict who had never shouldered a rifle, assuming the rights of a captain, issuing orders to common soldiers, and seizing a whole town. Such an absurdity brought many persons back to earth. The spread of civilization is steadily subordinating the profession of arms; any attempt to make of its members a supreme social class, aristocratic and overbearing, is bound to fail. For, sooner or later, there will always come a shoemaker from his last to show how easily a uniform may be donned, a swagger assumed, and the hero of braid and brass reduced to terms of flesh and blood.

LAFKADIO HEARN ON STYLE.

Among the hundred and one points of interest in the correspondence of Lafkadio Hearn are certain observations on the writer's art. Whatever Hearn was or was not, he was one of the finest artists in words of our time, and fully conscious of the processes that made his own style. One should recall also that few writers have shown his capacity for self-improvement. Beginning as an avowed adorer of the French Romantics, he fairly outbid them in the tropical exuberance of his early works. After forty, and as a result of his increasing interest in psychology, he forged himself an English of extraordinary delicacy, reserve, and precision. He did this in the face of what would seem insuperable obstacles. Beginning with the scantiest education, he was for a score of years an active journalist—the worst training, one would imagine, for the attainment of anything like severity or preciousness in style.

He succeeded, perhaps, through the clearness with which he distinguished between his journalism and his literature. Writing to his friend, the musical critic, H. E. Krehbiel, he says:

Let me dwell upon an art principle. Both you and I have a *trade*: journalism. We have also an *art*: authorship. The same system of labor cannot be applied to the one as to the other without unfortunate results. Let the trade be performed as mechanically as is consistent with preservation of one's reputation as a good *workman*. . . . But when it comes to writing a durable thing—a book or a *brochure*—every line ought to be written at least twice, if possible *three* times. . . . In the very act of copying, new ideas of grace, force, and harmony will make themselves manifest. Without this, I will venture to say, fine literary execution is *impossible*.

Clearly, this is pretty much Flaubert's creed of the "single word" that is worth vigils and fasting; and Hearn continues to preach the true doctrine to his friend, by counselling the perusal of etymological dictionaries. "Such books give one that subtle sense of words to which much that *startles* in poetry and prose is due."

A query and an exception to this view must be dealt with. Is Hearn's attitude to journalism quite fairly expressed in the above words? and, is style so purely a verbal matter as this passage implies? As for the first question, Hearn's associate on the New Orleans *Times-Democrat* can witness that he was reckoned as very much more than a good workman. He readily gave the surplus of effort that he recommended another to withhold. Indeed, his work for this newspaper was, on the whole, the rarest bit of luck that befell him. Nowhere but in New Orleans could he have written for a public to which translations of Gautier and Loti were an attractive journalistic feature. We doubt, also, if there was another office in the land where Hearn's luscious, yes, over-luscious, fantasies would have possessed permanent "news value." In short, this young genius was enabled to make a living from the unlikeliest source—in a sense, to ply his experiments in literature at the expense of the enemy journalism. The transaction naturally does honor both to himself and to his employers, but the passionate quest of the rare word and perfect phrase in those New Orleans days hardly explains the writer he afterwards became.

As everybody knows, he pretty well gave over his especial ambition for a poetical prose—"like chants wrought in a huge measure, wider than the widest line of Sanskrit composition, and just a little irregular, like ocean-rhythm"—and sought the more compact forms. He imperilled the considerable popularity his ornate style had won him for the sake of a larger intellectual satisfaction. In the same letter of 1886 in which he advises Krehbiel to scamp his

journalism for his literature, Hearn writes:

A friend disciplined me to read Herbert Spencer. . . . I found unspeakable comfort in the sudden and, for me, eternal reopening of the Great Doubt, which renders pessimism ridiculous, and teaches a new reverence for all forms of faith.

This experience pretty well marked the end of his Romantic absolutism on the score of style. But it is interesting to note that the conception of style as the inevitable expression of a richly stored personality had come to him even earlier. Writing in 1883 to the Rev. Wayland Ball, Hearn describes the four things that "enrich fancy"—to wit, mythology, history, romance, poetry. He urges that the "monstrous and the terrible" should be cultivated especially—true Romantic doctrine this—then, as if capturing a new idea in flight, he adds:

But there is one more absolutely essential study in the formation of a strong style—science. No romance equals it. If one can store up in his brain the most extraordinary facts of astronomy, geology, ethnology, etc., they furnish him with a wonderful and startling variety of images, symbols, and illustrations. With these studies I should think one could not help forging a good style at least—an impressive one certainly.

It must be said that this novel theory is held in somewhat crude fashion. Cumulation is still the ideal, and rhetorical perfection the goal, but there is in the passage, all the same, an inkling of that strange mixture of impressionistic vision with scientific analysis which gave Hearn his unique position in English letters. It might, indeed, be argued that those last fruitful years of his life were consumed in subduing the romanticist to the scientist. How difficult the readjustment was, many of the letters from Japan attest.

Hearn's problem, taken broadly, is very much that of modern literature. We need a reconciliation of some sort between the freedom, nay, the caprice, of the instinctive artist, and the scrupulous method of the man of science. There surely will never be a time when the matter of verbal ingenuity will be unimportant to a true man of letters; but it will be increasingly important to perceive that the pen writes merely out of the fulness of the whole experience behind it. In this sense, Lafcadio Hearn's admonition that, with all a literary man's getting, he should get science, is likely to remain a guidepost. Perfection certainly lies nearer that road than it does to the short-cut of the etymological dictionary.

NEW HEAD OF THE SMITHSONIAN INSTITUTION.

The trustees of the Smithsonian Institution, at their meeting on Tuesday, elected as secretary and executive head, in suc-

cession to the late Samuel Pierpont Langley, Henry Fairfield Osborn of this city. He has not yet announced his decision in regard to accepting the place.

Professor Osborn, one of the best-known American scientists, was born in Connecticut in 1857. At the age of twenty he obtained his bachelor's degree at Princeton. He has since received several honorary degrees from universities here and abroad. Three years after graduation he was appointed assistant in comparative anatomy at Princeton. His rise in his profession was rapid. He is now Da Costa professor of zoölogy at Columbia, and curator of vertebrate palæontology in the American Museum of Natural History; he is also vice-president and trustee of the latter institution. He has held many positions of distinction: Vertebrate Palæontologist of the Canadian Geological Survey, 1901-1903; since 1900, Palæontologist of the United States Geological Survey; president of the American Society of Naturalists, 1891; vice-president (section of zoölogy) of the American Association for the Advancement of Science, 1892; second vice-president of the New York Academy of Sciences, 1897; president of the American Morphological Society, 1897; president of the Marine Biological Association, 1898-1900; and vice-president of the New York Zoölogical Society. He is a member of numerous learned bodies, American and foreign. He has also been a prolific writer, both of popular articles and papers intended for specialists. Notable among his recent contributions to science is his work on the fossils of the horse family. This bare enumeration of his activities, and the recognition which he has received from scholars in all parts of the world, are evidence that he is a scientist of unusual equipment.

The choice of a new head for the Smithsonian brings up the question as to the scope and possibilities of the Institution. The secretary as well as the trustees should always bear in memory the motto on the Smithsonian seal. "For the increase and diffusion of knowledge among men." Situated as it is at the Capital, the National Museum, which is an integral part of the Institution, has a peculiar duty. For one thing, the Museum should be made to tell the whole story of America, in an orderly manner, under the direction of men who know what to place on exhibition for the instruction of the crowd and what to put away in storage vaults and laboratories for the use of trained investigators. At present, the failure to observe this distinction with care lessens the usefulness both of the public exhibits and the material reserved for research. First, there should be exhibits throwing all the light possible on the archæology and ethnology of the continent up to the time of discovery; second, historical material showing the effects of occupation by Europeans; and, third, complete illustration of natural resources.

Often the facts could best be presented by geographical sections. Industries of New England, let us say, made possible in the beginning by abundance of water power, might form a chapter in themselves. Agriculture and mining, forestry and fisheries, with all their allied activities, also call for logical treatment with reference to localities. There might be, for instance,

a room or alcove for Montana, with a relief map of the State, books and photographs pertaining to its history, its industries, its progress in arts and sciences, its libraries, schools, and government, as well as specimens of its minerals and plant and animal life; everything, in fact, worth knowing about Montana. The work of the army, the navy, and weather bureau might be set forth by themselves as in the exhibits in the Government buildings at the fairs in Chicago, St. Louis, and Portland. The plans for safeguarding public health should have their special place, and so on through the long list of Federal activities. This plan would also provide for adequate exhibits of American contribution to all the industrial arts and all the fine arts. There should be a comprehensive system of cross references to documentary and other material available in the library of Congress and the several departments of the Government. And the whole should be in charge of experts, whose duty it should be to aid visitors and students. The educational value of a great National Museum so arranged would be incalculable.

Men capable under competent direction of recasting the present Museum on these lines are already on the ground. The experts of the Smithsonian Institution and National Museum are admirably trained. But they need sufficient funds and an able chief to block out the work. For the Museum even to approach such a standard, the man chosen to administer its affairs must be more than a very great scientist. He must be a teacher as well as an investigator, and full of enthusiasm for his work of popularizing the institution. He must also have the success-winning qualities of the college president, not excepting the ability to state the needs of his plan so convincingly, to Senators and Representatives especially, that funds for maintenance and development will be readily forthcoming; for while the Smithsonian Institution is well endowed, the Museum, by means of which the more effective teaching is done, depends almost wholly upon appropriations by Congress.

The late Secretary Langley was not such a man as we have in mind. He was an accomplished scientist, and his ability was generally acknowledged; but his brother scientists called him a narrow physicist, and to the public, unfortunately, he was a sort of exalted Darius Green, who devoted his energies to his own hobby. Langley invented the bolometer, which measures the heat of a candle flame a quarter of a mile away, but he could not make a Congressman see beyond his own nose when the need of an appropriation for the National Museum was under consideration. People in general and statesmen in particular were bores to Dr. Langley; they were not even interesting specimens worthy of classification and study. Langley's predecessor, and the second Smithsonian secretary, Spencer Fullerton Baird, who served from 1873 until 1887, was of a different type altogether. He was a naturalist of the comprehensive school. He made the National Museum popular, and without setting apart a number of exhibits labelled "Children's Museum," he always bore in mind the fact that childish comprehension in matters scientific is not at all

a matter of years. When the Museum needed money, Baird would tuck a case of butterflies under his arm and go up to the Capitol, where he would gather a group of Congressmen about him and talk to them so entertainingly about his specimens that for the time being they would believe that there was nothing so worth while as natural history and the National Museum. Baird, never a slave of pure science, made no distinction between practical and theoretical biology. He founded the Fish Commission, and, as a specific illustration of his success in practical undertakings, fostered the shad fisheries along the Atlantic coast so that they became of great commercial importance. It is by the display of such qualities of scientist, teacher, diplomatist, skilled administrator, and practical man of affairs that the new incumbent must hope for success.

THE PARIS BOOK SEASON.

PARIS, November 20.

French novels, perhaps, most interest the world, but they are neither in quantity nor quality foremost in the exuberant output of Paris books. The most notable, and the highest in point of sale, is Marcel Prévost's "Monsieur et Madame Moloch," which in ten days reached its forty-second edition. As it appeared first in the *Revue des Deux Mondes*, it should be a bid for the next election to the French Academy, for which the author is ripe. It is an international romance, making known to French and Latins generally the German as he is to-day, and not as he was yesterday, that is, "before the war" when the Rhine was romantic. "Germany of revric and poetry and analysis is the true, the holy Germany; that of the swashbucklers is a spurious and passing Germany!" There is less of the psychology of women and more mature thought than in any other of this writer's books—and this is a great deal.

A voice from the past is Henry Céard's "Terrains à vendre au bord de la Mer" (Seaside Lots for Sale). The author is one of Zola's five disciples, who in the full flush of Naturalism wrote the "Soirées de Médan," from which Maupassant leaped into fame. Of the others, Paul Alexis is dead—a light that failed—Hennique has dropped behind, while J. K. Huysmans, a convert to Catholicism, has just poured his Naturalist soul into a book of etchings, cruel and sweet, of the crowds of Lourdes. Céard, who was an acrid theatrical critic, long since withdrew from the Paris world, and this first book of his for many years, in its already antiquated methods and standards, is like the story-telling of some long since *blasé* Rip van Winkle. Like those of his school, it is a long, concentrated, photographic, relentlessly uncharitable and unideal history of natives and summer visitors of a corner of Brittany.

The yearly volumes of Jules Verne are still appearing in course; and there may be others still to come from the dead author, who wrote industriously so as to be ahead of his contract. Ernest Daudet, elder brother of Alphonse, and more voluminous as a writer, gives another of the historical romances with which he intermits his regular line of Revolutionary history; the "Comte de Chamarande" is the tale of an

émigré who takes refuge from the Terror in London and returns to France for Bonaparte. The reading of his love episode does not prevent us realizing an epoch of history by the way. Historically, the work of Ernest Daudet is of high excellence and deserves to be better known abroad; he is the chief authority on the Emigration, and has had the papers of Louis the XVIII. to aid him.

In strict history, greatly cultivated from both the documentary and literary sides in France, we have the anecdotic "Paris sous Napoléon" of Lanzac de Laborie, a third volume, "Court and Town—Life and Death"; and Maurice Dumoulin's entertaining "Figures du Temps passé." Roger Boutet de Monvel has a more exhaustive volume than exists in English on "George Brummel et George IV." The Vicomte de Reiset, whose family has been mixed up with royal Legitimacy, has a book on the eccentric, half-heroic "Duchesse de Berry (1816-1830)"; and F. Nicolay brings out unpublished documents on "Napoléon Ier au Camp de Boulogne." The youth of "Louis XI. (1423-1445)" is studied by Marcel Thibault.

In Church history there is a new volume of Professor Brébier's "L'Église et l'Orient au Moyen Age," on the Crusades; a substantial thesis from the University of Helsingfors on the Holy See and Sweden (1570-1576), by Henry Biaudet; and an independent summary of results of recent research, "Manuel d'Histoire ancienne du Christianisme," by Prof. Charles Guignebert, whom a university thesis on Tertullian accredited some years ago. His present volume, "Les Origines," takes the sources of the history, Palestinian Judaism, the facts of the life of Jesus, the Judeo-Christian churches, Paul's life, missions, and churches, the Church of Rome—all down to the end of the first century.

In books for the man and woman of letters, picturesquely portraying the results of travel in the open air and in libraries, we have the veteran Michel Bréal's "Pour mieux connaître Homère," situating the poetry in Time and Space; and that amiable and advancing writer, Henry Bordeaux's "Paysages Romanesques," taking us to Germany, from Henry Heine's house to that of Beethoven, with Goethe and Victor Hugo by the way. The "Souvenirs d'un Peintre," by André Beaunier, has glimpses of the Commune and all that agony of an age which is gone within the memories of men. The indefatigable and always entertaining Academician, theatrical critic, university professor, and review writer, Émile Faguet, has "Amours d'Hommes de Lettres" (Pascal, Corneille, Voltaire, Mirabeau, Chateaubriand, Lamartine, Guizot, Prosper Mérimée, Sainte-Beuve, George Sand, and Alfred de Musset). Léon Séché has two volumes of the gossip dear to the modern heart, "Alfred de Musset"—family, comrades, women. To "Gérard de Nerval," who, mad as he was, shines not the least in the Romantic movement, Gauthier-Ferrières devotes a documentary and final volume; and Professor Lanson publishes the volume on "Voltaire" in the scholarly and readable series of "Grands Écrivains Français."

There are a few books of travel, or their equivalent, worth reading for pleasure as well as profit: "Un Crépuscule d'Islam," by André Chévrillon, the nephew of Taine, who has applied his philosophy, learning,

and descriptive ability to the city of Fez. With this may be taken the important book of a member of Neo-Islam, Israel Hamet, "Les Musulmans Français du Nord de l'Afrique." Charles Pettit, who has already shown that he knows from the inside the life of China, has another novel deep in its frivolities—"Le Chinois de Mademoiselle Bambou." "Trois Ans à la Cour de Perse" is by Dr. Feuvrier, who was the Shah's physician. A book stuffed with facts and compendious for American reference is "l'Émigration Européenne au 19^e siècle" (Great Britain and Ireland, Germany, Austria-Hungary, Italy, Russia), by Professor Gonnard of Lyons.

For those who have not yet learned that Décadents are things of the past, quite spluttered out, a little book "La Nouvelle Littérature" (1895-1905), by MM. Casella and Gaubert, will be an eye-opener.

Of books about books and writers, we have a posthumous "Esquisse Historique" of French literature in the Middle Ages, by the lamented Gaston Paris; it adds the fifteenth century to his work published in 1888; also, Marius Michel's "La Chanson de Roland," on the epic influences of chivalric poetry in Europe "persisting until this present"; a small book situating "Montaigne, Amyot, Saliat," by J. de Zangroniz; a "Port Royal" edition of Pascal's "Pensées," after original MSS., with notes, facsimile, index, and concordance, by that zealous surviving Jansenist, Professor Gazier of Paris. In Alcan's series of Philosophers by writers conversant with medieval commentators on Aristotle, is a volume on Plato, by Professor Piat of the Catholic Faculty. Prof. Paul Stapfer has "Études sur Goethe," in connection with Lessing and Schiller, and concerning "Werther," "Iphigenia," "Hermann and Dorothea," and "Faust." Madame Goyau (Lucie Félix-Faure) publishes another of her studies in various literatures, "Ames Païennes, Ames Chrétiennes," noteworthy for a refined and religious French appreciation of Christina Rossetti. There are three volumes of Henri Brémond's books on Newman—Development Theory, Psychology, Christian Life—all three crowned this year by the French Academy. A. Feugère, also from a Catholic point of view, studies Lamennais before his really epoch-making book "Essai sur l'Indifférence." And then we have the "Cahiers de Jeunesse (1845-6)," from Ernest Renan himself; the second volume is to appear at Easter; both are edited by his daughter, the wife of Professor Psichari of Paris.

Of high thinking on subjects of pressing interest, we have a volume of M. Brunetière's papers, "Questions Actuelles," dealing, among other things, with Evolutionary Morals doctrinally, with the Pacifist Lie, and Classic Humanities. M. Mermeix, an industrious and trained compiler, has a book on Socialism, which is fairly complete as an exposition of the theory.

Among classics—that is, books for classes in and out of school—two might well interest American students of French: the first of the three volumes devoted to an "Anthologie des Poètes (1866-1906)," and Maurice Bouchor's "Théâtre pour les Jeunes Filles," including such subjects as Nausicaa, the First Vision of Joan of Arc, Sleeping Beauty, and Cinderella—all good literature and versification. S. D.

Correspondence.

EDWARD IRVING AND THE "PROPHETESSES."

TO THE EDITOR OF THE NATION:

SIR: Andrew Lang, in his reference in your issue of November 22 to the forthcoming biography of Edward Irving, speaks of some of the outward manifestations attendant upon the public ministry of this Scottish preacher and divine. Mr. Lang adds: "As far as I am aware, the Rev. Mr. Irving himself disliked all these . . . gabblings in unknowable tongues." Permit me to bring to the attention of your readers some evidence on this point; and in doing so I trust Mr. Lang will not consider it an unwarranted intrusion.

The intimate relation between Edward Irving and Thomas Carlyle is well known. Carlyle says of Irving after the death of the latter in 1834: "My poor first friend, my first and best!" The following account may then be accepted as correct. In a letter to his mother of date October 20, 1831, Carlyle says:

I dare say you have not seen in the newspapers, but will soon see something extraordinary about poor Edward Irving. His friends here [London] are all much grieved about him. For many months he has been puddling and muddling in the midst of certain insane jargonings of hysterical women and crackbrained enthusiasts. . . . This, greatly to my sorrow and that of many, has gone on privately for a good while with increasing vigor; but last Sabbath it burst out publicly in the open church; for one of the "Prophetesses," a woman on the verge of derangement, started up in the time of worship, and began to speak with tongues, and, as the thing was encouraged by Irving, there were some three or four fresh hands who started up in the evening sermon, and began their ragings. . . . Happily, neither Jane nor I were there, though we had been the previous day. We had not even heard of it. When going next evening to call on Irving, we found the house all decked out for "a meeting" (that is, about this same "speaking with tongues"), and as we talked a moment with Irving, who had come down to us, there arose a shriek in the upper story of the house, and presently he exclaimed, "There is one prophesying; come and hear her!" We hesitated to go.

All this, much as it grieved, did not take away the faith that Carlyle had in his friend and his life work. Tenderly and beautifully he conveyed to Irving's mother his conviction:

Tell her that her son did not live for Time only; but for Eternity too; and that he has fought the good fight, as we humbly trust, and is not dead, but sleepeth. ["Thomas Carlyle, a History of the First Forty Years of His Life," Volume II., Froude.]

HENRY T. ROSS.

Ottawa, Ontario, November 27.

Notes.

E. P. Dutton & Co. have ready for publication a new and revised edition of "An Introduction to the Study of Browning," by Arthur Symons; "A Crystal Age," by W. H. Hudson; "Local and Central Government, a Comparative Study of England, France, Prussia, and the United States," by Percy Ashley; "Act of State in English

Law," by W. Harrison Moore; "Footsteps of Proserpine"; "Constantine the Great," a tragedy; "Savonarola, a City Tragedy," and "Kiartan, the Icelander, a Tragedy," each by Newman Howard.

We are to have this month, from Putnams, the new "Life of Walter Pater," by Thomas Wright. This is said to contain a large amount of valuable material that was not touched by previous biographers; and in particular to bring out the relationship between Pater and Richard C. Jackson, his closest friend, who was the original of Marius, the Epicurean.

Putnams have just issued the fourth series of "The Shelburne Essays," by Paul E. More. A number of these essays appeared originally in the *Evening Post*, but they have been considerably revised and enlarged for republication. The present volume deals with R. S. Hawker, Fanny Burney, Keats, Herbert, Franklin, Lamb, Walt Whitman, Blake, Milton, and Walpole.

Brentano issues the "Tales from Shakspeare" by Charles and Mary Lamb, in two volumes of handsome print. Canon Ainger's Introduction is retained, and the engravings by Anker Smith, Schiavonetti, and others. The style of the volumes, like Lamb's text, is fitted for adult readers rather than for children.

Dodd, Mead & Co. have made a holiday book of the chapter in Maeterlinck's "Life of the Bee," which tells the story of "The Swarm." Trees and bee-hives and fences, all a pale green, are blotched over the pages.

Thomas Y. Crowell & Co. have an attractive series of slender books printed at the Merrymount Press, each containing an essay or address on some question of the day. A few of these we may name without further comment: "Putting the Most into Life," by Booker T. Washington; "American Character," by Brander Matthews; "The Happy Family," by George Hodges; "Great Riches," by Charles W. Elliot; "Friendship," by Thoreau; "Saint Francis of Assisi," by Oscar Kuhns.

The Century Company adds three more volumes to its Thumb-Nail Series: Emerson's "Friendship and Character," Edward Everett Hale's "Man Without a Country," and "The Book of Proverbs." These books, of genuine pocket size and with their stamped leather covers and typography by the De Vinne Press, have something of the charm of the season about them.

The H. M. Caldwell Co. issues Ruskin's "King of the Golden River" and Dickens's "Sketches of Young Couples" in pocket-size volumes bound in limp red leather.

Those who care for humor of a rather obvious and very American type will find it in the pictures and rhymes that go to make up "Why They Married," by James Montgomery Flagg. The book bears the imprint of the Life Publishing Company.

Shorn of its glamour of slang, Mr. Ade's humor turns out to be of thinner substance than we supposed. The same thing might happen to Mr. Dooley stripped of his brogue, but we do not think it would. We have all heard of "American humor," but America or no America, a difference subsists between a clown and a comedian, a jester and a humorist. Mr. Ade's "Pas-

tures New" (McClure, Phillips & Co.) somewhat feebly recalls "Innocents Abroad." This escaped American comments with casual facetiousness upon various superficial aspects of European travel; assisted by one Peasley, an American of the drummer type, who amuses Mr. Ade immensely. The only really humorous chapter in the book is the one on "French justice as dealt out in the Dreyfus case." Mr. Ade uses the figure of dog-stealing that was suggested by Mr. Dooley at the time of the Dreyfus trials; and develops it successfully. Of "Dissertations by Mr. Dooley" (Harper & Bros.) it need only be said that F. P. Dunne holds his own. His present series of dissertations deserves a place with its forerunners. The present reviewer can hardly express his opinion of Mr. Dooley's quality as a humorist more forcibly than by confessing that on his own shelf the philosopher of Archey Road is flanked on the one side by the Autocrat, and on the other by Hosea Biglow.

In his impressionistic descriptions of "Cities," which appeared originally in the magazines and are now published in book form by E. P. Dutton & Co., Arthur Symons is quite at his best. "As you know, and, I sometimes think, regret, I am one of those for whom the visible word exists, very actively," he writes in the Dedication; "and, for me, cities are like people, with souls and temperaments of their own." My Symons is rather fond of the word soul, and uses it when others would think of some combination of colors and scents belonging rather to the body than to any spiritual substance. And so, in these chapters, it is witchery of fine sensations that characterizes Rome or Seville or Prague or whatever city Mr. Symons visits. Eight excellent photogravures make this one of the most acceptable of the holiday books.

An attractively printed volume of "Addresses of John Hay" (The Century Co.) brings together twenty-four miscellaneous pieces, presumably all that it has been thought proper to reproduce in permanent form. The papers vary greatly in length and character, from such extended addresses as those on Franklin and McKinley, the New York Chamber of Commerce address on "American Diplomacy," and the speech at Jackson, Mich., on "Fifty Years of the Republican Party," to short responses at dinners, dedications, and other public functions. Most of them have already seen the light in newspapers or magazines, but two or three, prepared but not delivered, are apparently now published for the first time. Some of the short addresses are models of appropriateness and form, and the volume as a whole illustrates very well Mr. Hay's graceful style, his refined and pervasive humor, his happy faculty of saying the right thing at the right time, and his ability to handle serious matters with a light touch. With these qualities, which gave him distinction as a man of letters, went also an almost religious regard for the principles of the Republican party, a genial contempt for political independents, and a leaning towards hero-worship; but while the addresses here collected show these traits also, they show still more the generous cosmopolitan culture which, next to his sense of humor, made John Hay one of the best poised statesmen of his time.

Senator Henry Cabot Lodge's latest volume of historical miscellanies bears the title "A Frontier Town, and Other Essays" (Charles Scribner's Sons). The "frontier town" is Greenfield, Mass., at whose one hundred and fiftieth anniversary Mr. Lodge was the orator. Of the other papers and addresses which the volume brings together, the eulogy on Senator George F. Hoar, pronounced before the Massachusetts Legislature in January, 1905, is the most notable, though the portrait of Samuel Adams, reprinted here from the W. A. Wilde Co.'s "Stepping Stones of American History," is a sound piece of popular historical writing. Such titles as "Good Citizenship," "The Senate of the United States," and "Certain Principles of Town Government" represent topics on which Mr. Lodge, whatever the vagaries and errancies of his political career, has usually written informally and interestingly. As a whole, the contents of the volume have less distinction than the same author's "Fighting Frigate and Other Essays," but that any man in public life should be able to write so much and so well is itself gratifying.

The late Bishop B. F. Westcott left in manuscript a fairly complete commentary on Paul's Epistle to the Ephesians, together with some scanty notes on topics pertinent to the subject. The task of editing this material was committed to the Rev. J. M. Schulhof of Clare College, Cambridge, who in this edition (Macmillan Co.) has given the commentary proper practically as it is in the manuscript, and has added, partly from the writings of Dr. Westcott, and partly from other sources, an Introduction, a series of additional notes, the text of Codex Amiatinus, and the English versions of Wiclif and Tyndale. Probably most posthumous editions of this character are unsatisfactory. The book is a fragment, and as such is to be estimated.

The fiftieth anniversary of the founding of the *Frankfurter Zeitung*, first known as the *Frankfurter Handelszeitung*, was recently celebrated by elaborate ceremonies in which the city authorities took prominent part. Those of the State and nation might even have shown their good will; for there are few newspapers of the *Frankfurter Zeitung's* independence, ability, and worldwide fame. But, as is recorded in the ponderous tome of one thousand pages which lies before us as a more permanent memorial of the semi-centennial, the Prussians have never been friendly towards the *Frankfurter Zeitung*, which, in 1866, they drove to Stuttgart for a brief exile of three months. For the Imperial authorities, this liberal journal has too often been a thorn in the flesh. They cannot ignore it; for it is the ablest financial newspaper in Germany, and is to be found in every café in Vienna and every club in London, beside having subscribers in every German hamlet. Not even Bismarck could purchase it or shape its policy. Its courageous and able writing is marked by a vigor and a style all its own. The modern tourist in Frankfurt is shown the Goethe birthplace and the *Römersaal*; he should also have the home of the *Frankfurter Zeitung* pointed out, if he would see a chief factor in the city's amazing rise and prosperity. This semi-centennial volume, "Geschichte der Frankfurter Zeit-

ung," is really a detailed history of Germany from the Liberal point of view, since the founding of the newspaper. Its course in matters social, political, and financial is set forth with accuracy and detail. The list of reforms for which it has contended is endless; it has fought the good fight for a democratic State founded on the broadest kind of suffrage. Opposition to a dangerous militarism and to an overgrown navy has been as much a part of its propaganda as its demand for modernization of the penal laws, for freedom of thought, of speech, and of trade, for a free press, for amelioration of social conditions, and its resolute criticism of Germany's colonial folly. Its reviews of American financial happenings and of our railway development have contributed greatly to the movement of German capital to this country and the marketing of American railway securities on the Continent. Again and again, notably in the vicissitudes of the Northern Pacific Railway, it has shown a noteworthy insight into affairs on this side of the water, and a correctness of judgment which has been amply demonstrated in the lapse of time. That so independent a newspaper has flourished in the face of official dislike and the hatred of the aristocratic ruling classes is in itself a testimonial to the soundness of the *Frankfurter Zeitung's* views. Whoever studies this record of its activities must feel that it contains inspiration for independent journalists the world over.

"Hahshurger Anekdoten" is the title of a volume of anecdotes and personal incidents relating to members of the Hapshurg dynasty from its founder, Rudolf I., to the present Emperor, Franz Joseph I., covering a period of more than seven centuries. The material is collected by the head of the Imperial Family Library, Dr. Franz Schnürer, and published by Robert Lutz in Stuttgart. Many of the stories go to show that the present sovereign of Austria has not only shown remarkable insight and energy in promoting the educational, commercial, and industrial development of the country, in opposition to strong reactionary influences, but is also known for his kind heart and sympathy. The Emperor is very fond of children, and a charming story is told of the manner in which he was led to distribute the plume of green feathers on his hat as souvenirs among the pupils of a school which he visited. Another act evincing fine feeling was the gift of a life seat in the opera house to an officer, who had been made blind by a wound received in battle, and who had a strong passion for music.

In the *Revue de Paris* for November 1 and 15, Professor Brunot presents the report of the commission entrusted with the task of preparing a simplified French orthography. The commission numbered among its other members M. Croiset, Dean of the Faculty of Letters of the University of Paris; Paul Meyer of the *École des Chartes*, and M. Faguet of the Academy and the Faculty of Letters. The principles by which the commission was guided were the following: no innovation to be made that in any way clashed with the received pronunciation, as given in the Hatzfeld-Darmesteter "Dictionnaire Général"; compounds and derivative words to conform in

spelling to their originals; words otherwise related (as *baril* and *barrigue*) to be similarly spelled; no "etymological spellings" recording derivation from languages other than Latin to be preserved. The principal changes recommended are these: the circumflex accent to disappear, except over *a*, *e*, and *o*; the acute accent to be placed over all *e*'s not mute that are followed by a single consonant and a vowel other than mute *e*; the grave accent to be placed over all *e*'s followed by a single consonant and mute *e*; *oeu* to become *eu*; Greek *oe* and *y* to become *e* and *i*; *-ien-*, pronounced *-ian-*, to be written *-ian-*; *homme* and *femme* to be left undisturbed, as also the termination *-tion*; Greek *ph*, *th*, and *rh* to be written *f*, *t*, *r*; final *x* representing *s* to become *s*; *bb*, *pp*, *ff*, *gg* to be simplified everywhere; *mm*, *nn*, *tt*, *rr*, *ll* before final *e*, and *tt* before final *re*, to be simplified; in the interior of words to be retained if an actual double consonant is pronounced (as in *illogique*), otherwise their retention to be optional; *ee* to be retained only when actually double in pronunciation and when pronounced *es*; *equ* to become *qu*; *ek* to become *k*; *j* to be written wherever its sound occurs—perhaps the most radical change of all.

"Littérature Italienne," by Prof. Henri Hanvette of the University of Grenoble, is a new volume in the series of *Histoires des Littératures* (Paris: Armand Colin), a French collection which has much in common with Edmund Gosse's *Literatures of the World*. Professor Hanvette replaces Dr. Garnett's pleasantly garrulous compendium by a work of much surer learning, more rounded form, and wider generalizing power. The "Littérature Italienne" is an admirable example of the French art of the subordination of erudite details to order and lucidity. M. Hanvette is *du métier* in all things Italian (his recent *thèse* on Luigi Alamanni's *ristles* with learning through some 700 octavo pages); but in this charming sketch neither foot-notes nor bibliographical details disturb the continuity and effectiveness of the text. It is the best brief account of Italian letters that has been written by any scholar of trans-Alpine birth.

William Lee, the Boston publisher, died last Friday at Hampton, N. H. He was born in Boston in 1826, and when only eleven entered the book business, serving apprenticeships in several Boston houses. In 1860, with Charles A. Shepard, he started the publishing firm of Lee & Shepard. Mr. Shepard died, and in 1897 Mr. Lee disposed of his interest to the Lothrop, Lee & Shepard Company.

A committee has been formed for the purpose of buying Coleridge's cottage at Nether Stowey, and preserving it as a memorial. While living there he wrote much of his best poetry.

The annual report on public libraries just issued by the Education Department of this State, is the most complete in its statistical tables that has yet appeared. It gives not only a comprehensive survey of conditions in this State, but reports many items of national interest, such as the year's library legislation in various States, gifts in the United States and Canada, the composition, resources, and work of various State commissions, and the proceed-

ings of national organizations. According to the report, the total number of libraries in the State, of a public or semi-public character, is 1,243, an increase of 103 during the year; the addition of new books amounted to 488,996 volumes, making a present total of 8,164,686. The year's increase in volumes circulated for home use was 1,035,167, making a present annual circulation of 13,266,779. These figures show a growth, during the twelve years that the present library law has been in force, of 100 per cent. in the number of libraries, of more than 200 per cent. in the number of volumes, and of more than 400 per cent. in the annual circulation.

MCMASTER'S HISTORY.

A History of the People of the United States, from the Revolution to the Civil War. By John Bach McMaster. Vol. VI. 1830-1842. New York, D. Appleton & Co. \$2.50 net.

This volume covers only twelve years, but they were of great social importance. They marked the success of the democracy of the West in obtaining the Presidency, and the failure of that democracy to meet the requirements of the day. Much the same experience of political success and failure that characterized the rise and fall of the Virginia dynasty of Presidents was repeated in Jackson and Van Buren. The issue was the same—a recognition of a wider democracy. It would be absurd to compare Jefferson and Jackson; it would be equally misleading to draw a parallel between John Quincy Adams and Martin Van Buren; yet the darkness of defeat that temporarily obscured the development of Jeffersonian principles was not unlike that which overwhelmed Van Buren, and brought the South into a situation which politically paralleled the experience of Virginia upon a larger scale. As the development of Virginia was limited by the Virginia resolutions of 1798, so that of the South was restricted by the concentration of political thought and action upon States' rights, with special reference to slavery. To counteract this activity, an anti-slavery agitation and party rose in the free States, and in the resulting contest Jackson, and what he stood for, came to be as much out of date as Clay and his divided ambitions. The history of the Jackson-Polk régime is distinctly a history of the South and West.

The volume opens with the beginnings of Jackson's war upon the Bank of the United States, an application of Western ideas of finance, based upon a constitutional principle. A debate on a public land policy passed into a discussion of States' rights; and the same question appeared in an acute form in the nullification movement in South Carolina, where the inequalities of the customs tariff aroused such opposition that a separation from the Union seemed preferable to loss of liberty. This step was an interpretation of the Virginia resolutions of 1798, which even their framers would have repudiated. The growing agitation of the abolitionists aroused bitter feeling in the South, and gave occasion to a movement for the abolition of slavery in the District of Columbia; this movement in turn accentuated the unreasonable demand of the advocates of States' rights, consolidated the South, made the annexation of Texas cer-

tain, and provoked scenes in the House over the "gag rules" for rejecting petitions on slavery that, though not creditable to the dominant party, furnished a splendid occasion to the abilities and high patriotism of John Quincy Adams. The removal of the deposits and the following era of speculation brought financial disaster, and in the ruins Van Buren stood discredited as a party leader, to be succeeded by the amiable but ineffective Harrison. The volume closes with Tyler's second veto of the "fiscal corporation." In all this time States' rights, slavery, and fiscal monopoly were the issues; and these issues were raised by the South and the West.

It is because the questions of domestic policy were so largely economic that the course of the Jackson Administration is so interesting. To such matters Jackson himself had never given attention before his election to the Presidency. He was in favor of a "judicious tariff," whatever that might mean, but South Carolina looked upon him as a high protectionist; he was opposed to bank paper, but judged and condemned the Bank of the United States more because of alleged political interference than for actual banking reasons; the policy of internal improvements by the national Government he disapproved on constitutional, not fiscal, grounds, and the foolish distribution of the surplus was a substitute policy that immediately proved dangerous; his ideas on the payment of the national debt were sound, but in his rage against "bank monopoly" he destroyed what supplied a good foundation for the commercial interests of the country, as well as a convenient instrument for performing the fiscal operations of the Government. His successor paid the penalty politically. As a financier Jackson was ignorant, and the men around him were quite as ignorant. Ingham, Secretary of the Treasury, when asked for an opinion on the Bank, said he had not given the subject attention and had no suggestion to offer. Taney, who removed the deposits, was controlled by political, not financial, motives, and Woodbury could not forget his local prejudice against the great Bank. Moreover, the friends of the institution committed errors which played into Jackson's hands. Mr. McMaster does not give a summary of Adams's able report on the charges against the Bank, nor does he mention the tactical blunder of allowing Dallas, instead of Webster, to offer the memorial for a recharter. As a Pennsylvanian, Dallas claimed this as a right, but he made a very unsatisfactory exhibition. It was Van Buren who supplied Jackson with arguments against internal improvements, and it was from outside his Cabinet that the President conducted his campaign against the Bank, a campaign largely fostered by State banks which expected to be benefited by the destruction of their big rival. The sub-treasury system, that came in Van Buren's time as a substitute for the Bank, has proved unfortunate, and to this day exercises an influence upon the money market capable of being much abused.

It is not in describing financial and commercial questions that Mr. McMaster is strongest. To give the arguments on both sides, drawn from the debates in Congress, from newspapers and from controversial pamphlets is an excellent method, provided it is not carried so far as to confuse. The

reader is continually asking for some definite opinion upon matters so fully discussed, a summary of results that will throw some light upon the conclusions of so capable a student of history and so diligent an assembler of facts. Were those problems merely for the day, to be closed with the end of a session of Congress or with the end of the year? Was the attack upon the Bank justified? Was the tariff of 1828 really burdensome to the South, and did the compromise remove the cause of complaint? Were the people as a body interested in the overthrow of the Bank, or was it merely a question of Jackson's popularity, so strongly supported that he could undertake and carry through any measure he saw fit to make his own? Such questions multiply as the reader progresses, and in the mass of incident and multiplicity of detail, he seeks for something more than an orderly arrangement of material. The skill of the writer is undeniable, and his method lends itself to a vivid development of a single incident. Nothing could be better than the account of the Harrison campaign, where shouting and spectacular effects took the place of appeals to the reason of the voters. The withdrawal of small notes, by States and nation, the Buckshot and Aroostook wars, abolition troubles, reckless inception of internal improvements, and the progress of railroads may be cited as other examples of good work. But the stringing together of a number of such episodes, with little or no connecting thread, does not constitute history, and exposes a weakness in the writer's methods.

No definite idea is conveyed of the leading characters of those twelve years. The one glimpse of Jackson's dominating manner is given in the amusing account of his reception of the friends of the Bank; but this does not atone for neglect of many fitting opportunities for drawing his character. Jackson's growth in personal power and arrogance was the keynote of the time, and the issue in 1832 and 1836 was only Jackson and what he was supposed to represent. He could destroy Calhoun politically and impose Van Buren upon a somewhat reluctant party. He could force White into retirement, and effect the outlawry of Duane. His personality controlled the public measures, and he rode roughshod over men and opposition, making his will the law, and opposition to himself treachery worthy of severe punishment. He gloated over his victories, however gained, and exulted as eagerly over the defeat or downfall of his friends who questioned or opposed his course, as over the political death of his enemies. All this it would be difficult to gather from Mr. McMaster's pages. The Swartwout appointment, made against the most solemn advice of Van Buren and many New York politicians, is not mentioned; nor is so much as a paragraph given to the separation between Jackson and Calhoun, which resulted so disastrously to the latter, and threw so little credit upon the former. The account of the dissolution of Jackson's first Cabinet is neither full nor clear, and the absurd yet politically potent intensity with which the President espoused the cause of Eaton and his wife deserved a closer treatment. No single incident in his eight years, complete opera bouffe as it was, threw so

clear a reflection of his personality. The influence of the Kitchen Cabinet is hardly suggested, and no attention is given to the men he called around him or promoted into high office for reasons personal to himself. The one exception is the reward of Taney, where the author quotes from the sycophantic letter written by the new chief justice upon receiving his appointment.

Nor do we gain any clearer idea of Van Buren. What made him the power in politics he became, and entitled him to the Presidency? His personal correspondence would show how closely he kept in touch with the influential leaders of his party in the different States; how much he favored the prominent journalists, and how ready he was to reward a faithful follower, and to quarrel with him when his usefulness was exhausted or his power became too great to make him an obedient or a comfortable colleague. His statesmanship appears large when measured against that of his party contemporaries; but his courage was developed in the years of his adversity. Until the close of his Presidency he remained a politician rather than a statesman. Clay, too, was a fit subject for study, as well as the successful Harrison, who robbed him, as it were, of the object of his ambitions. These men, and many more, were not mere lay figures, on whom can be hung the events of their time. They were living and popular forces, voicing the views of their following and seeking to direct the movement of political action. In the hands of Mr. McMaster they are little more than names.

In this at times severely impersonal record the narrative loses in force and interest. Why state that "a member" said something in debate, when the name of the speaker, of his State or section, would give point to his remarks? The editor of a newspaper possessed a personal force in that day. While Duff Green was editing the Administration organ he spoke with authority, and it was the same with Blair when the Jackson favors were turned towards him. Jackson rewarded so many editors with office, that even the faithful Ritchie protested. Noah and Dawson, Kendall, Hill, and Daniel were influences not to be overlooked. Ritchie held close relations with Van Buren, and his editorials were often inspired by this New York leader. The significance of a quotation from the *Enquirer* and the *Telegraph* is lessened when no reference is made to the fact that Ritchie was editor of the one and Green of the other. The author says the *Globe*, an Administration newspaper just set up, etc., but nowhere states that Blair was the editor, a man who exerted a great personal influence upon Jackson, and more than any other one man suggested and kept alive his prejudices and hatreds. How much the element of personality adds to the narrative is seen in the account of the nullification episode, where the Jackson and Poinsett papers have been freely drawn upon. In contrast, note the account of the proceedings of State political conventions where no names of leaders are given, and none of the vivid contemporary pictures of the principal actors. Anthony Butler's mission to Texas and its subsequent complication should have been mentioned, as well as the fact that Taney prepared the paper on the Bank which Jackson read to his Cabinet in Sep-

tember, 1833. No reference is made to Livingston's having written the nullification proclamation, or to the widespread comment upon some of its sentences which were interpreted as "dangerously squinting" at Federalism. Even John Randolph, who had received favors from Jackson, directed his last effort against its doctrines.

With all its faults this history is undoubtedly the best that has been written of the twelve years. It is a storehouse of fact, and brings to light a mass of material which will be as useful to the historian as interesting to the general reader.

BOOKS FOR CHILDREN.—I.

Our shelves reserved for juveniles are running over; adventure tumbles upon adventure; fairy tale upon fairy tale. We may complain that no volume looms up, save, perhaps, J. M. Barrie's "Peter Pan" (Charles Scribner's Sons), which is sumptuous in its colored drawings by Rackman, but which is rather the "Little White Bird" incident amplified, than the fantasy as played so charmingly by Miss Adams. For the majority of the books are as they were last year; the plots are conventional, are moral; and if they are of the "retold" class, they are faithful. There is little that is distinctive.

Allan French, in "Pelham and His Friend Tim" (Little, Brown & Co.), has struck a melodramatic vein which is industrially up to date. Pelham and Tim represent capital and labor, and the struggles at the mill, which is owned by Pelham's father, whirl around these two. There are seeds of discord sown among the peaceful village men, by a foreign workman who talks socialism; there is a mean persecutor of Tim, who has a mystery about his life; there is the gradual bringing of the villain to his just deserts at the end of the story. Pelham and Tim each try to outvie the other in valor. They save the mill's machinery, they turn workmen themselves, and through their efforts, contracts are filled, despite the strike. Mr. French has infused vigor and action into his pages.

"The Crimson Sweater" (The Century Co.), by Ralph Henry Barbour, is more conventional. Try as they may, authors of the present, when they write of school, are always forced into describing football, rowing, and the treacherous big boy. And Roy Porter, the hero, is only one of a large class of martyrs; he does many a noble deed for his school flag, and wins in everything. When his crimson sweater is placed, by the sneak of the story, so as to heap suspicion and punishment upon him, he takes his sentence as Spartan boys should. There is a heroine, named "Harry," who is all she should be, with her variable moods and her good fellowship.

A rare style marks the book by Norman Duncan, which he calls "The Adventures of Billy Topsail" (Revell). The scenes are laid in and about Newfoundland and Labrador; the adventures are among men of the class who hunt for seals, and who fight with the elements that bring down ice floes and bergs. The adventures are consecutive, and the heroes, for there are two, do things, not in order to show off, or to illustrate a moral point, but because their blood must be kept warm in the Far North, and because among men they must be men

also. One will feel, after reading Billy's episodic career, that some definite impression remains of that far country. Mr. Duncan, like Stevenson, has shown that heroines are not always needed. A woman figures but slightly in these pages, and she is accustomed to the ruggedness of sea and land.

In its execution, Amos R. Wells's "Donald Barton and the Doings of the Ajax Club" (Little, Brown & Co.) is disappointing. It commits the dire mistake of having its hero spend too much thought on right doing. The good boys of a community are opposed by a very rough set of bad boys. There are doubts, misgivings, and suspicions, centring around a park owned by a crusty old man who tries to keep the public off his land. Donald Barton is unjustly thrown into prison, and is saved by a minister, who, with the aid of the usual heroic girl, brings retribution upon the chief figures of the "gang," who have done everything from lying to setting barns afire. Then, since all is seemingly quiet, the rest of the story tells how the private park, with its disreputable crowds, is gradually turned into a healthy, public pleasure ground. Though there is the highest intent in this, the author has somehow missed his mark. Alas for the tale written with an eye looking down upon boyhood!

E. Nesbit has just barely escaped such criticism. "The Railway Children" (The Macmillan Co.) are two girls and a boy, forced to live away from London, with their mother, in reduced circumstances. It turns out in the end that the father of these children, accused of selling state secrets, and imprisoned therefor, was unjustly suspected. An Old Gentleman, who passes morning and night on a suburban train, and who never fails to wave to the children, brings the dénouement to a happy close. In the meanwhile the children become noted figures down by the railroad. Chief among them is "Bobbie," a girl, of course, and in the midst of saving trains, rescuing boys from tunnels, capturing a Russian, and the like, she is the only one who realizes the loneliness of her mother. Many things they did were better left unrecorded, but the sum total is harmless and goodnatured. The interest—of which there is a fair amount—is fortunately independent of the weak pen-and-ink drawings. As an English tale, and as a story of wide appeal, this book is far surpassed by Mrs. Harker's "Concerning Paul and Fiametta" (Charles Scribner's Sons), which is a delightful example of an author's intimate knowledge of juvenile ways.

It is difficult to indicate that borderland which separates childhood from youth. For readers in the latter division Roy Rolfe Gilson contributes a poetic account of "Katrina" (Baker & Taylor Company), a girl who grows up in constant association with a Mr. Larry, a newspaper gentleman worthy of Dickens, in his humor and quiet sadness. In this child before him, he sees bud forth the image of her mother, whom he loved in days gone by. But where, on Katrina's part, the intercourse ripens into a deep friendship, the man realizes a deeper love for her at the moment he finds her taken from him by another. Mr. Gilson has produced a satisfactory bit of writing. What girl does not like to cry just a little

over books, and, as for that matter, how many grown-ups would miss the chance!

These grown-ups are, after all, not so far removed from the realm of juvenile fiction. There is a lurking sense of ignorance, a smiting sarcasm in those books we give to girls and boys under the titles "Legends Every Child Should Know" (edited by Hamilton Wright Mabie; Doubleday, Page & Co.), and "Songs Every Child Should Know" (edited by Dolores Bacon; Doubleday, Page & Co.). Many an older person would profit by conning the legends, for in no other way, probably, would they become familiar with "Beowulf" or countless other tales that stimulate household imagination. Mr. Mabie's introduction is interesting, even though not illuminating. The music included by Mrs. Bacon in her compilation, is, to say the least, inclusive in its scope. The words, the arias, and the concise histories of the songs themselves, are entertaining. But such a book should be graded rather than arranged artificially into groups of Sentiment, War, Chants, Hymns, and the like. Take, for instance, the Shakspeare section. We might teach our seventeen-year-old daughter "It Was a Lover and His Lass" or "O, Mistress Mine." But simpler melodies, such as we find in the "St. Nicholas Song Book," would better suit the palate, as well as the vocal range, of those under fourteen. Mrs. Bacon is too generous, though her idea is excellent.

There are two classes of the heroic that children like: the legendary, of which Homer's "Odyssey" is a type; the historical, of which Ethel Wedgewood's English version of "The Memoirs of the Lord of Joinville" is another. The Rev. A. J. Church ("The Odyssey for Boys and Girls"; The Macmillan Co.) is familiar to young readers; he has done much to bring the classic world within modern range, and in his "Odyssey" the wanderings of Ulysses are adequately represented both in text and pictures. It is doubtful whether many boys of average patience will go far in the Joinville memoirs, though there be much of the adventurous in them (E. P. Dutton & Co.). The translator, if such a word can be applied to the author, has done a worthy piece of work, which will be more useful than popular; more lasting to the old than absorbing to the young.

Coming to modern days, the rise of Abraham Lincoln from cabin to White House has its wide appeal and never loses in reiteration. In the face of what her father did before her, Miss Helen Nicolay's "Boy's Life of Abraham Lincoln" (The Century Co.) is not only creditable but comprehensive. "The heritage of his example" are the last words in the book, and they epitomize the vast secret of the value of all historical reading for children.

CURRENT FICTION.

Beached Keels. By Henry M. Rideout. Boston: Houghton, Mifflin & Co.

The present commentator read two of the three stories in this volume as they first appeared in magazines. They impressed him strongly—an impression confirmed and deepened by rereading. "Wild Justice" stands out with almost startling distinctness against the pale mediocrity of current

magazine fiction. In certain quarters, this story might conceivably give offence by its realism, in others by its sentimentalism. This combination of qualities suggests certain tales by F. J. Stimson ("J. S. of Dale"), in which a similar attempt is made to portray the mingled sordidness and romance of our New England coast villages. A filial love of singular steadfastness and delicacy is here offset against the gross intriguing of a foul though physically alluring woman. The instinctive vengeance, or wild justice, of a pure, loyal, and longsuffering spirit against the crowning desecration of a mother's memory is the consummation toward which the events relentlessly carry us. The avenger gives himself up to legal justice; in this, too, we acquiesce. There is no glorification of lynch law, or belittling of statute law.

Georgie. By Dorothea Deakin. New York: The Century Co.

The male inconstant has at least one fixed quality—his value in print. Steadfast in fickleness, he may be an Abraham Cowley, a Don Juan, a Lothario, or perhaps the Trenholm whom Mrs. Wright pictured in "The Aliens," the man who was, as said one of his relicts, "part of our education." Or he may be a "Georgie," differing from all these. This modern young athlete, with his beguiling smile, is not a knight who flirts and runs away. Rather is he, or is meant to be, a hopelessly, helplessly engaging boy whose small heart-affairs flutter about him, and perch upon him, charming him, annoying him, involving him by turns. It is they that are butterflies rather than he. Among them he stands occupying a boyish, scampish, serio-comic central position till at last Fate drives him away to South America.

The book is frankly comic with the unmistakable touch of Great Britain in its quality of fun, particularly in those passages which reproduce the American girl's dialect as conceived by the English humorist. They must be seen to be not believed. But though belonging to the bubbles of bookmaking, the story is of an ingratiating kind, and serves to wreath an hour in half-protesting smiles.

The Treasure of Peyre Gaillard. By John Bennett. New York: The Century Co.

A remarkably ingenious and vigorous yarn of mystery, involving hidden staircases, spooks, negro legends, a double cipher, and more particularly a vast treasure hidden in the depths of a South Carolina swamp. The author would probably add love to our list, but we found gratefully little of this over-marketed commodity, and that easily negligible. It is pathetic to see how difficult it is for the most well-meaning tale-spinners to stand out altogether against the public's, or publisher's, demand for what is known to the trade as "heart-interest." Mr. Bennett has based his style upon Stevenson, now fairly to be considered the classical model for this sort of work:

"Dod, man, you look merry," said Geake, with a croak of mocking laughter. . . .

At the man's gross impudence my gorge rose; my hands itched; I detested him, not because I could not prevail to move him, but for his callousness of feeling, and that he had no mercy. If the profanity one

thinks but does not utter stands against one's long account, I must throw myself upon the mercy of Heaven, for my thoughts were piebald with it.

Is there anything in "David Balfour" more like "David Balfour" than this? The total effect of the story, however, is not Stevensonian. It contains no blood-warming series of adventures. The hero seeks and finds his treasure, not by means of his good sword and good luck, but by his natural wit, his professional skill, and the intuition of his sweetheart. When they really set out to find the treasure, it is simply as in youth one looks in a "key" to verify the answer to a problem. But for such as delight in cryptograms, and love to see a detective intelligence finding its way unerringly among a puzzling maze of facts, as somewhat frequently happens in fiction, the book will contain action enough. Great pains are taken to give the ancient documents quoted an air of verisimilitude; and the maps are clever and quaint. Unfortunately, we should say, there are a number of other illustrations, apparently after photographs, which represent the supposed hero and heroine as far less attractive than the text suggests. They look as if they deserved to marry each other, as we gather that they actually did.

NOTES FOR BIBLIOPHILES.

A Bibliography of James Russell Lowell. By George Willis Cooke. Boston: Houghton, Mifflin & Co.

This is the second in the series of bibliographies of American authors issued by Houghton, Mifflin & Co.; and, like the Hawthorne bibliography, it is printed on one side of the leaf of a good quality of rag paper, which permits annotations and additions in ink. The edition is limited to 530 copies. Collectors of first editions of Lowell will probably be the persons by whom the book is most consulted; and from the collector's point of view this bibliography has serious shortcomings. The collector wants a list, in one consecutive chronological series, of the first editions of books which his author wrote, of those to which he contributed, and of those which he edited or translated. The collations, at least of the rarer items, should be given, with the points which distinguish the earliest issue of the first edition if there should be any variation in copies. The greater part of this information is to be found between the covers of this bibliography, but it is so scattered as to be hardly usable. Mr. Cooke in his Preface says that "as a literary worker he has had in mind the requirements of students rather than collectors in the arrangement of his materials." Many collectors of Lowell's books are among his most ardent students, and every student will, if his means permit, be more or less of a collector.

The book begins with an almost one-line-title list of Lowell's published books. Here is found the rare specially issued "Mason and Slidell" of 1862, but neither the London nor the Birmingham editions of the lecture "On Democracy," 1884. *Harvardiana* and *The Pioneer* are included, but not the Boston *Miscellany*, for which Lowell was also a leading writer. Then follows a list of bibliographies of Lowell in which George V. W. Duryea, the well-known col-

lector, who contributed an article to the *Book Buyer* on first editions of Lowell, becomes "George W. W. Dudgee." Next comes the "Alphabetical List of Single Titles" of Lowell's writings in prose and verse, including reviews and editorial comments in the various periodicals with which Lowell was connected. This list gives the date (of a periodical) or the volume in which each piece first appeared, as well as titles of volumes in which each was first collected. The preparation of this list, if as accurate and complete as on first glance it seems to be, must have taken an immense amount of research. It is information not readily accessible elsewhere. There are altogether about 780 titles of poems, essays, reviews, addresses, etc., many of which have never been reprinted in any edition of the collected works. Nor does this list, with two or three exceptions, include the numerous letters of Lowell, which have been printed in periodicals, catalogues, transactions of societies, etc., either before or since his death.

The next section, the "Chronological List of Separate Works and Editions," is the most important to the collector. This begins with Vol. iv. of *Harvardiana*, of which Lowell was one of the editors, and to which he was an important contributor. Except *Harvardiana* and *The Pioneer*, this list does not include periodicals or books edited by Lowell; nor does it include any hooks to which Lowell was a contributor only, such, for example, as the long series of that famous annual, "The Liberty Bell," the "Victoria Regia," etc. The edited hooks are in a special list; the books contributed to cannot be found at all except by title of the poem or article in the alphabetical list already referred to. Within these limitations, barring some omissions which we shall note, this section is very full. Besides first editions, later reprints are given as well. Collations of important books are generally complete, and in the case of first editions the original binding is generally described. The contents of books made up or separate pieces are printed in detail. In the case of important hooks, records of sales at auction are appended. Contemporary criticisms and notices are also in many cases referred to.

Within the limits set by the compiler—and considering the first editions only—we note the following corrigenda, which purchasers of the book may wish to enter on the blank pages:

Lowell's first separately printed piece, that excessively rare broadside poem, "To the Class of '38, by Their Ostracized Poet (so-called), J. R. L.," is not included; nor is it found in the alphabetical list of single titles. We have never seen a copy, but a half-tone reproduction is shown in Edward Everett Hale's "James Russell Lowell and his Friends."

"A Year's Life" is described as having a slip of errata. The errors were not discovered until some copies had been bound and sent out. The earliest issue, therefore, did not contain the errata slip.

No mention is made of the fact that some copies of the "Poems" of 1844 were on large paper, though the sale of one copy (a duplicate from Brown University, 1901, \$150), is incorporated in the list of auction records, without comment. This large-paper issue is rare, but there are at least five copies in private collections in New York.

The binding of the first edition of the "Conversations on Some of the Old Poets"

is put down as cloth. The book was, however, issued in a lithographed cover, the cover of some copies being dated 1845, of others 1846. The copy which brought \$100 in the Bartlett sale in 1903 was in stiff illuminated boards. The second edition, 1846, was in cloth.

The Second Series of "Poems," 1848, was issued in boards, paper label, as well as in cloth, as noted. This was also true of the "Fables for Critics."

There are two varieties of title-page of the first series of "The Biglow Papers." Some copies have the Cambridge reprint only; others, probably those made for the New York and Southern and Western market, have also George P. Putnam's New York imprint. The latter is the one transcribed by Mr. Cooke. Collectors prefer the former. Of this book also some copies were published in boards, with paper label. Mr. Cooke notes only the cloth binding.

"The Vision of Sir Launfal," 1848, is described as issued in cloth. It was issued in yellow glazed paper boards.

The "Poems" of 1849 described as published in boards, was also issued in cloth.

The exceedingly rare "Mason and Shidell," 1862, a "separate" printed from the types of the *Atlantic Monthly*, is not found in this chronological list. A copy brought \$175 in the Arnold sale of 1901. Only some three or four copies are known.

Portions of the Second Series of the "Biglow Papers," which in large part appeared in the *Atlantic Monthly* in 1862 and 1863, and which were not collected in this country until 1867, were reprinted earlier in hook form in England. Parts 1 to 3 were issued separately in 1862 by Trühner & Co. at one shilling each. These little pamphlets, which are very rare, are noted by Mr. Cooke. He does not, however, note the slightly less rare London collection of 1865 issued by the same publisher. This included Nos. 1 to 7 only; four additional chapters, besides an Introduction and the revised form of the poem "The Courtin'," were added to the American edition in 1867. This first issue of Trühner's collected edition consists of title and 133 pages of text. There is another edition of the same date, with title slightly different but apparently printed from the same types. The sixth line of the title of the first issue reads "Authorized Edition," of the second "Authorized People's Edition." The first issue, with seven chapters only, has 133 pages of text. An eighth chapter was added to the second issue, the paging extending to page 141. The position of the signature marks differs in the two editions. The first is A to H, each eight leaves, with one preliminary leaf for the title, the signature marks being on pages 1, 17, 33, etc. The second issue is A to I, each eight leaves, the title leaf being included in the first signature, which is without mark. The signature marks in this issue are on pages 15, 31, etc.

Hotten's edition of 1865 of "The Biglow Papers," with illustrations by George Cruikshank, noted by Mr. Cooke in his list of editions of the Second Series, is an error. This was actually the First Series.

The earliest issue of "Under the Willows" should contain an erratum slip, as noted. In later copies the error was corrected, and no slip is necessary.

A few copies of "Among my Books," Second Series, evidently the first sent out, have the date 1875 in the copyright notice. This was afterwards corrected to 1876. This "point" seems to have been unknown to Mr. Cooke.

The lecture "On Democracy," delivered by Mr. Lowell in Birmingham on October 6, 1884, had been put in type in London and a few copies run off before it was delivered. It was afterwards printed as a pamphlet by Cond (not Coud) Bros. in Birmingham. This latter edition is the only one mentioned by Mr. Cooke in this chronological list. But in the list of "Addresses and Speeches" he distinctly states that the Birmingham edition is the first and the London edition the second. This is an error, as a comparison of the two editions clearly shows.

The later sections of the Bibliography are "Collected Works," "Works Edited by Lowell," "Addresses and Speeches," "Bibliog-

raphies, Letters, Reminiscences," "Notices and Criticisms," and a note about Lowell's manuscript correspondence now in the library of Harvard University. Collectors will be surprised to find that interesting skit "Il Pesceballo" under the head of "Works Edited."

The Merwin-Clayton Sales Co. of this city offers at auction on Monday, Tuesday, and Wednesday next week a collection of hook-plates and engravings. The book-plates, many of them early, are almost entirely American. Among the engravings, practically all American, are specimens of the work of J. Norman, Amos Doolittle, William Rollinson, Alexander Anderson, and Peter and Samuel Maverick. On Thursday the same firm sells a collection of autographs and manuscripts, including a manuscript poem (three stanzas) by Francis Scott Key, and a transcript, in the author's autograph, of "America."

At the Merwin-Clayton Sales Co.'s auction of November 26 and 27 Pierce Egan's "Life in London," 1821, illustrated by George Cruikshank and finely bound in levant by Rivière, brought \$51; a first edition of Goldsmith's "Life of Beau Nash," 1762, bound in calf by Rivière, \$18; the Kelm-scott Press "Poems" of Shakspeare, 1893, printed in vellum, \$33; other Kelm-scott Press issues ranged from \$5.50 to \$21.

The copy of the rare second edition of Spenser's "Shepherd's Calendar," 1581, which sold at Hodgson's, in London, on November 29 for £180, was bought by a firm of New York booksellers, and is now on its way to America. At the same sale Spenser's "Complaints, Containing sundrie small Poemes of the Worlds Vanitie," 1591, first edition, brought £81. Compared with the "Shepherd's Calendar" the "Complaints" is a common hook. Previous high records on the "Complaints" are £49 10s. at Sotheby's, in London, 1901; £45 in the same rooms, 1903; and \$230 in the McKee sale at Anderson's in this city, 1901. The latter, a fine copy, had been Gaisford's, bringing £20 10s. at his sale in 1890. A copy of Lamb's "Tale of Rosamund Gray and Old Blind Margaret," 1798, was sold for £93 at Hodgson's on November 29, though it had not been included in the printed catalogue. It was in the original boards, uncut, but had the reprinted title-page, "London, printed for Lee & Hurst." It was, of course, not to be compared with the copy with the original title-page, "Birmingham, printed by Thomas Pearson," which brought £122 at Sotheby's last July. With either title-page the hook is exceedingly rare.

The House in St. Martin's Street: Being Chronicles of the Burney Family. By Constance Hill. With illustrations by Ellen G. Hill. New York: John Lane Company, \$7 net.

Of the tribe of gentlewomen who are exploiting the eighteenth century at their ease, Miss Hill is the least amateurish and most entertaining. Her "Juniper Hall," published three years ago, filled out our knowledge of a charming episode in the life of Fanny Burney. Her volume on the homes and friends of Jane Austen was another happily written volume, though not so novel in subject as the "Juniper Hall." The pres-

ent work is at once a pleasure and a disappointment. It is named from the old house of Sir Isaac Newton, which was occupied by the Burneys from 1774 to 1783, but in reality the book follows the family, especially Fanny, about during those years to Streatham, Chessington, Bath, Brighton, and elsewhere, in such a way that the title is a complete misnomer. There is no harm in this, and even a writer of much less ability than Miss Hill could scarcely make a dull book on this subject from the material accessible to all the world. But besides this Miss Hill has had access to the unprinted Burney MSS. still preserved in the family, including the diaries of Charlotte and Susan, letters written to and from Mr. Crisp, letters from Mrs. Thrale, Fanny's comedy of "The Wiltings," and a mass of other stuff. She has drawn on this material freely; she would have made a far more acceptable book if she had used it exclusively and omitted commonplace reflection and all the hackneyed stories from printed sources.

The most notable of the chapters is that which contains a scene from Fanny's comedy "The Wiltings," which she suppressed by the advice of her two daddies. Miss Hill, from a perusal of the whole play, confirms the judgment of Fanny's censors, but the specimen given is maliciously amusing and only strengthens one's regret that these new sources were not drawn on more heavily. At least one can now read with better appreciation the pages in Fanny's Memoirs which deal with the episode of the play. Of one of these censors, "Daddy" Crisp, we get in Miss Hill's book only tantalizing glimpses. Why did not Miss Hill print his letters to the Burneys in full? From the fragments given one guesses that they are far more characteristic than the correspondence with his sister recently published in the "Burford Papers."

Scribbling was a trait of the Burney family, and the diaries of Charlotte and Susan were only less voluminous than Fanny's. From both these sources Miss Hill gets a number of good anecdotes. Charlotte, the youngest of the sisters, was evidently a most intense and slangy young lady. In her record Garrick becomes if anything more boisterously gay than ever, and we see him caning a servant maid "up a whole flight of stairs, desiring at the same time to know what she laughed for"—all, of course, in good fun. And then, having reached Dr. Burney's study—the chaos, as it was called—he continued his antics in a milder vein:

He took off Dr. Johnson most admirably. Indeed, I enjoy'd it doubly from having been in his company: his *see-saw*, his *padding* [just the words Fanny uses of him in her Diary], his very *look*, and his voice! . . . He took him off in a speech (that has stuck in his gizzard ever since some friendly person was so obliging as to repeat it to him). . . . "Yes, yes; Davy has some convivial pleasantries in him; but 'tis a futile fellow."

In Susan's Diary we become better acquainted with Pacchierotti, "Sweet Pacc," as they dubbed him in St. Martin's Street, the singer who endeared himself to all the family and who appeared under his real name—to his own delight and surprise—as one of the characters of Fanny's "Cecilia." To Fanny he was devoted particularly, and we learn now from a letter written by her to Susan that on his last evening before leaving England he expressed

his devotion to her in unmistakable language. "Poor, sweet Pacchierotti!" exclaims Fanny in her letter. "What a strange world is this!" He lived to a happy old age, nevertheless, and his last words were a prayer to God "to be admitted to one of the humblest choirs in heaven."

Of another Italian singer who plays a sentimental part in the drama—tragedy in this case—of that circle we get several views. Everybody knows the sensation caused by the marriage of Mrs. Thrale to Piozzi, and how it broke up her friendship with Dr. Johnson and Fanny Burney. His first meeting with Mrs. Thrale—long before Mr. Thrale's death—is not so well known. It is related in Fanny's Memoir of her father and also in Charlotte's unpublished Diary:

Mrs. Thrale of the whole ooterie was alone at her ease. She feared not Dr. Johnson, for fear made no part of her composition. . . . She suddenly but softly arose, and, stealing on tiptoe behind Signor Piozzi, who was accompanying himself on the pianoforte in an animated *aria parlante*, with his back to the company, she began imitating him by squaring her elbows, elevating them with ecstatic shrugs of the shoulders, and casting up her eyes, while languishingly reclining her head, as if she were not less enthusiastically struck with the transports of harmony than himself.

It is pleasant to read that Dr. Johnson, himself a great sinner against conventions, stopped the pantomime by whispering to her: "Because, madam, you have no ear yourself for music, will you destroy the attention of all who, in that one point, are otherwise gifted?"

Of such anecdotes Miss Hill's volume is composed—a thoroughly enjoyable excursion into the eighteenth century. The illustrations, in part line drawings of the houses and rooms where these scenes occurred, are capital.

Spinoza and Religion. By Elmer Ellsworth Powell. Chicago: Open Court Publishing Company. \$1.50.

Sympathetic exposition, such as is contained in Pollock's and Joachim's studies of Spinoza, either clarifies or makes more generally available, a point of view with which it may be important for every investigator to be acquainted. Or free interpretation, like that of Herder, may contribute directly to the advancement of philosophical knowledge. But refutation or disparagement, while it may be a valuable exercise for the writer, is otherwise important only in so far as it bears upon current tendencies, or lends itself to a purpose that is on the whole constructive. Judged in the light of these considerations, the importance of Professor Powell's "Spinoza and Religion" is questionable. Although the author defines his book as "a polemic against a mistaken interpretation of Spinoza's philosophy and personality," it shortly appears that this means an attack upon that philosopher's prestige, on the ground that he has been overrated. The present book is therefore an essay in belittlement. Professor Powell proves himself to be thoroughly conversant with Spinoza's writings, and with the meagre biographical data that may be drawn from other sources; but he employs these resources to urge against Spinoza the personal charge of

disingenuousness and timidity, the philosophical charge of obscurity and inconsistency, and the religious charge of atheism.

The unremitting disparagement of Spinoza's personal qualities appears most strikingly in the author's treatment of those episodes in his life which have hitherto been supposed to prove his moral courage and endurance of adversity. Thus after describing Spinoza's excommunication with all possible qualifications, he concludes with evident reluctance that "it must still be recognized that the experience through which he passed at this time could not have been a pleasant one, especially for a person of Spinoza's disposition." Of Spinoza's declination of the appointment to the University of Heidelberg, he remarks: "This act has been represented as an evidence of his divine indifference to honors, position, and riches. We pay more respect to his sanity when we attribute his refusal to the plain dictates of common sense." Now it ought to be clear that if Spinoza did not make any sacrifice in either of these cases, this fact in itself testifies to the completeness of his renunciation of worldly advantage for the sake of intellectual liberty. With any historical imagination it is impossible not to regard Spinoza as in this respect greatly superior in nobility to any of the philosophers of his period. He achieved his independence through the cultivation of his own intellectual and spiritual powers. Professor Powell either fails to appreciate this, or deliberately slights it. In either case he leaves the reader with the false impression that Spinoza followed the line of least resistance, and allowed circumstances to dictate his fortune.

Professor Powell is less impressed with the boldness of the thought in the "Theologico-Political Treatise," and of Spinoza's determination to publish it, than he is with its use of religious language in "an accommodated sense." And it is suggested that because the last part of the "Ethics" was composed "when his ears were ringing with the charges of atheism," Spinoza there "carries further than ever his policy of clothing non-religious conceptions in the phraseology of religion." But such depreciatory judgments can be made plausible only through subordinating the central events of Spinoza's life to a doubtful interpretation of minor circumstances. If timidity had been fundamentally characteristic of Spinoza, he would have lived and died an orthodox Jew. If accommodation had been his characteristic method he would have used his philosophical ability to gain the favor of political and ecclesiastical authorities, as did Descartes and Leibniz. It is the main fact in his life that he did neither, but preferred his intellectual self-respect to anything that society could give him. The charge that his manner of writing was conciliatory is then either untrue, if taken to be significant, or insignificant, if taken to be true. Regarding the fact, the best proof of Spinoza's sincerity is to be found in the character of his influence, and in the tone of his writings. Among contemporaries, and among students of philosophy from the time of Herder and Jacobi, he has won the respect and devotion of those best qualified to understand him. His manner is not effusive and apologetic, but simple and direct.

When, as in the case of final causes, he is opposed to the common view, he does not evade the issue, but speaks flatly and unambiguously. It is true that his forms of statement are constructive rather than destructive; but, saving Professor Powell, we may readily understand this from the fact that he never lost his positive religious grasp of God, and sought only to formulate his belief in terms consistent with the first principles of philosophy.

The most solid part of Professor Powell's book is his analysis of Spinoza's metaphysical system. Through default of criticism, the "Ethics" has enjoyed "the quite unwarrantable reputation of being a masterpiece of iron logic." Pursuing on the whole a method of negative criticism, the author demonstrates Spinoza's various ambiguities and inconsistencies; and the majority of his criticisms are sound and instructive. But we must pass on to Professor Powell's main contention, to the effect that there is an irreconcilable opposition between Spinozism and religion. Religion is "the emotions and activities determined by belief in a higher personal power, or in higher personal powers, with whom man is assumed to sustain relations." It is because Spinoza fails to provide these higher personal powers that he fails to afford a ground for religion. Now, strange as it may seem, the author deals with the element of divine personality in religion with no reference whatsoever to the function of the religious imagination, a consideration which in this connection is of the greatest importance. The attitude of worship undoubtedly attributes personality to its object. But the really serious problem for the philosophy of religion is to determine the degree to which the attitude of worship itself supplies that element. Anthropomorphisms are commonly the consequence, and not the cause, of the worshipper's hope, fear, reverence, or adoration; and therefore are not implied beliefs, but rather the *imaginative treatment of beliefs*. To worship anything is to personify it; but this does not mean that only persons are worshipful. To insist that whatever is essential to the attitude of worship must be theoretically attributed to the object, is to ignore the fact that religion, like poetry and conversation, is a mode of construing objects of theoretical belief; and is largely constituted of elements which it freely creates, or gradually acquires in the historical development of its own peculiar symbolism. Religion unquestionably includes an element of belief; but that belief has reference primarily to the individual's dependence on ultimate powers, to his hope of safety or favor at their hands, and not to their metaphysical constitution. In the case of Spinoza, the author urges that God is not defined as a person, with "cognitive and volitional consciousness"; while he neglects the really significant fact that the universe according to Spinoza is the supreme object of the will and affections. Whether truly or falsely, Spinoza teaches that through the cultivation of the understanding the individual may come to look upon the universe in all its necessity and impersonality as the highest fulfilment of his own life. The immutable truth is an object to be revered and loved, not as a fellow human being, but as the goal of aspiration, as an object transcending all moral and æsthetic values. That Spinoza and others as well have

found an object so defined to be a possible object for the religious sentiments, testifies to their imaginative temperament and capacity, and does not fall within the scope of logical criticism. Professor Powell is forced to deny the religious quality not only of mysticism, but of all the more philosophical and enlightened forms of reverence and consecration that tend to multiply as the race becomes sophisticated. He is brought to the false position of regarding religion, not as a necessary human interest grounded in the general circumstances of human life, but as a special doctrine subject to refutation at the hands of science or philosophy.

Nevertheless, the reader will find this issue, which is very general in its bearings, discussed by Professor Powell with great acuteness. Here, as throughout, the author demonstrates his familiarity with the field and his liveliness of interest. The style, furthermore, is excellent, and does much to redeem a book which is otherwise too doggedly iconoclastic to be either stimulating or pleasing.

Fire and Sword in the Caucasus. By Luigi Villari. Illustrated. London: T. Fisher Unwin; New York: James Pott & Co. \$3.50 net.

"Russian Colonial Policy" would be an appropriate sub-title for this work, as it is a graphic picture of the way in which the Tsar rules subject races. The author was in the Caucasus during the summer and autumn of 1905, and visited every important centre of political unrest, and interviewed "people of all classes, races, and religions, from the viceroy down to simple peasants, from the chief of the secret police to the Georgian revolutionary leaders." His narrative is introduced by a brief sketch of the country, its people and history, from which some appreciation of the difficulties of the governmental problem can be obtained. Chief among these is the fact that in a district not so large as Spain there are some fifty or sixty races with different languages or dialects. Since this tract is the pathway connecting two continents, numberless migrations of peoples have passed over it, each leaving some of its members behind in secluded valleys and rocky fastnesses. At the present day, there are on the slopes of a mountain in Daghestan seven villages, each speaking a different language. Though the Russians have ruled these peoples for a century and have aroused no such hatred as in Poland, yet Transcaucasia at least has not become Russian, and there is no union between the different peoples. The Georgians, Armenians, Turks, and other nationalities have preserved their languages and their racial characteristics intact, and in many cases, especially the most civilized, they are imbued with strong nationalist feelings.

The author's route was from Batum on the Black Sea east to Baku on the Caspian, and from thence to Mt. Ararat, the meeting-point of the three empires, Turkey, Persia, and Russia. Then he turned northward to Tiflis, and crossed the central mountain chain by the famous Darial Pass. He describes not only the incidents of the journey, giving his impressions of the country, the people, and their mode

of life, but he also tells the story of the disturbances in each place visited, and their causes. This is derived mostly from the testimony of eye-witnesses, for he himself apparently saw no great outbreak except at Vladikavkaz. Here during a demonstration on November 1, on the occasion of the Tsar's manifesto promising reforms, a student was beaten to death and two schoolboys carrying red flags were "literally torn to pieces" by a mob, while the Cossacks fired upon all indiscriminately, and looted Armenian shops and houses. Fighting had ceased for the time at Baku, but a general sense of expectation and anxiety hung over the town—a fear which was justified by a third pogrom a few weeks after he left. On the oil-fields an appalling scene of destruction met his eyes. "It was more like some frightful nightmare than a reality."

Here he found the acutest phase of that hostility between the Tartars and Armenians which is the chief disturbing element in the Caucasus. The cause was very evident. The great bulk of the native population of the province of Baku is Tartar. But with the development of the oil industry the Armenians came, and with their superior education, their greater intelligence and energy, acquired a controlling influence in the town. Though numerically inferior they form a majority on the town council, and they are represented by five members out of seven on the *Soviet Siedz* (council of naphtha producers). "The Armenian workmen are much less tractable than the Tartars. They demand better food and higher wages, more comfortable lodgings, baths, reading-rooms, etc., whereas the Tartars are content with anything that is given them. The Armenians belong to workmen's societies, and if they do not get what they want they organize strikes, and even take part in revolutionary movements." All over the Caucasus they are to be found as bankers, merchants, shopkeepers, manufacturers, lawyers, doctors, teachers, engineers, and officials, and we are not surprised at his conviction that they are the most capable race in the Caucasus and will become the predominating element in the country.

Still more interesting in some respects are the Georgians, who though lacking the practical spirit of the Armenians are a more intelligent people, with strong literary tastes. "Every village has its own library, and even those furthest from the Government post stations provide their own mail service so as to receive the daily papers from Tiflis, Batum, and Russia." Their political aspirations have been till recently for the autonomy promised them by treaty, but never granted. This aim is now abandoned since the Social Democrats have come among them, and a republic based on socialist theories was established two years ago at Ozurgety. Mr. Villari visited the town, which lies some distance from the railway and contains about 5,000 inhabitants:

The administration was carried on by the inhabitants themselves in the most communistic manner, each man contributing his share of money or labor for the common good. They worked in shifts to maintain the roads and bridges, and one sometimes saw nobles, priests, peasants, and shopkeepers all manfully doing their turn of work. Native schools have taken the place of Russian ones; and the children

are taught the three R's, combined with socialist principles in the Georgian tongue. Civil and criminal actions are brought before the *Narodny Sud* (popular tribunal), but the old forms of punishment have been abolished; no one can be legally put to death, nor even imprisoned. The usual penalty is boycotting for a longer or shorter period, and as the community is practically unanimous, the process can be carried out very effectively. He describes a trial which he witnessed of a man who had been convicted of adultery and condemned to perpetual boycott. The accused appealed to an assembly of some two hundred people, mostly peasants, of all ages and both sexes, for a remission of the sentence, promising to reform. An animated discussion on the merits of the case followed, and finally a resolution in the culprit's favor was moved. Each member of the assembly then went into the church, where a peasant recorded the votes, "while a priest stood by to give a religious sanction to the proceedings." The movement is characterized by such a remarkable unanimity that the Russian vicerey told Mr. Villari that he meant to regularize and legalize the *Narodny Sud*, "which administers justice far more honestly and efficiently than do the State tribunals." The situation changed soon after Mr. Villari left. Desperate fighting has taken place in and around Ozurgety, and the whole province has been drenched in blood.

The causes of the present condition are not far to seek. The Viceroy himself admitted to the author that the chief evil of the Caucasus was its bad administration, and ill-paid and dishonest officials. The reader will close Mr. Villari's book with the conviction that there is absolutely no distinction between the Russian rule in the Caucasus and that of Turkey in Macedonia. In each the aim is not the welfare of the governed, but simply the retention of supreme power. And in each case this is accomplished by directly fomenting the racial hostilities of the subject peoples.

The numerous reproductions of the author's photographs are interesting, and add substantially to his narrative.

The Flock. By Mary Austin. Boston: Houghton, Mifflin & Co.

In the *Georgics*, Virgil blended husbandry, beauty, and observation from a poetic angle, with knowledge of his own craft. To make a long skip, Richard Jefferies recorded both what he saw and the connection between things seen and things remembered—tradition, history, and an undercurrent of well-subordinated science. In "The Life of the Bee," and in his wonderful sketch of the dog, Maeterlinck adds to all of these qualities his own poetic philosophy of life. With the same sentiment for nature, Thomas Hardy uses his knowledge as a setting for his groups of rustic human beings. While showing points of likeness to all of these, Mary Austin, in "The Flock," at once establishes herself as their worthy kinswoman, never their imitator. That strain runs in her blood which makes her see and feel as they do. It is not the abstract and detached observation of Thoreau, it is at once more purposeful and more romantic, in fact, more warm-blooded.

Whether this be a question of personality, or of her inspiring surroundings, the product stands quite apart. Baldly stated, it is no more than a study of the sheep industry in California, with a slender thread of historic narrative, a picture of sheep herding, a word for irrigation. This summary of "The Flock," however, bears about as much relation to the actual achievement as a statement that the first book of the *Georgics* is a treatise on agriculture, or that the "Pêcheurs d'Islande" has to do with salt fish. In the opening chapter you learn how domestic sheep first came to Monterey. You have no sense of being instructed, you merely feel that the author is talking agreeably and discursively on a subject of deep interest to herself, and in a manner that makes you a willing listener.

Mary Austin's method is to give you the picture, sky, flowers, animals, and men. You see it all as if you had just come from your Pullman car to a shearing. Gradually she explains a little, the breed of sheep, of dogs, of shepherds; how they have come over long and weary trails, following feed and water; how forest preservation has brought about struggles between herders and rangers; how a beneficent law may, in its first working, make for injustice, as when, at the end of a long journey, the expected pasture is a preserve, and the ranger does his duty while sheep starve and die, in order that the region may be saved from perpetual drought. All this she tells, with anecdotes of the ways of sheep, with bits of legend and of tradition, tales of finessing on the part of herders and of sagacious dogs. She likewise stops for queer speculations on the development of the animal mind; and pauses to let you infer what analogy you please between the "flock-mind" (of which she says "I cannot very well say what it is, except that it is less than the sum of all their intelligences") and the crowd-mind of humanity. With the closest observation and sympathy where animals are concerned, she does not sentimentalize about them: she makes the limits of instinct quite as clear as its scope. Of some five hundred sheep charging over a precipice to escape a bear, she says: "The brute instinct had warned them asleep, but could not save them awake." Her chapter on the dog is particularly delightful, his business with the flock is described as "a trick man has played on the dog to constitute him the guardian of his natural prey"; and the whole analysis of what the collie means to the herd, and what the herd means to the collie, is entirely free from false observation or obstructive theorizing.

And so the book rambles on through a shepherd's year, leaving you with a sense of refreshment, with a desire to join the hairy little Basques and Frenchmen on their long journeys, to eat savory messes out of their black camp pots, to lie under the sky with dogs and flocks, lulled to sleep by the "blether" of ewes and the bark of distant coyotes. The charm of the whole lies in three qualities: the novelty and interest of the subject, the picturesque texture of the author's mind, and in a style which is both cultivated and racy, and adapted to conveying her unusual sense of beauty.

Reminiscences from My Childhood and Youth. By Georg Brandes. New York: Duffield & Co. \$2.50 net.

When Georg Brandes, in 1871, began that first series of lectures on "Main Currents in European Literature," from which a new epoch may be counted, not only in Danish, but in Scandinavian literature, he was already well known as the foremost student of literature among the younger Danes, as a brilliant essayist and critic, and as a thoroughgoing radical. He had been abroad several times, had studied in Paris under Taine, whose personal acquaintance he had made, as well as that of Renan and John Stuart Mill, had translated the latter's "Subjection of Women," had written his doctor's dissertation on Taine as the exponent of French aesthetics, and had attacked Rasmus Nielsen's attempt to reconcile dogma and science. His "Reminiscences from my Childhood and Youth" tells the story of his life up to 1871, and throws an extremely interesting light on his preparation for his career. One could have wished for more light on his intellectual and scientific development and for less attention to trivial details. For instance, the whole of the digression, called "Filomena," might very well have been omitted. There is, particularly in the latter half of the book, a certain lack of proportion and coherence. But it is in many ways an interesting book, especially in its first chapters, which deal with his childhood and early boyhood. Brandes was evidently a very precocious youth. When at fifteen or sixteen he read Lermontof's "A Hero of Our Times," he imagined that in Petrsjövín he could recognize himself. Already at school he was filled with ideas of a great goal, which, however, "was very indefinite, and was to the general effect that I intended to make myself strongly felt, and bring about great changes in the intellectual world; of what kind was uncertain." Later, his ideas developed more distinctly, and he felt himself as one who would contribute to the great literary revival which he believed was imminent. When, therefore, a couple of years later, Ibsen wrote him that he ought to be one of the leaders in the coming "revolt of the human mind," Brandes was neither unprepared nor unwilling.

The translation of the book is, unfortunately, not very good. Not only is Brandes's nervous, individual style entirely lost, but the translator shows lamentable ignorance of idiomatic English. Too often we meet words and sentences that evince a diligent, though unintelligent use of the dictionary; for instance: "The best free research men," "Association with a multiplicity of people," "There was a sacristy odor about all that he said," "An instance of paradoxicalness." The index is indifferent.

Drama.

"SAINTE THÉRÈSE," BY MENDES.

PARIS, November 23.

The "Sainte Thérèse" of Catulle Mendès, with Sarah Bernhardt swathed as a nun in the title rôle, has had a *succès de curiosité* after a year's public wrangle between au-

thor and actress, and a *succès d'estime*, for both are personages of age and importance in their world. It is only fair to cite the opinion of Émile Faguet of the French Academy: "This is by far the finest dramatic poem which M. Catulle Mendès has written; it is one of the finest in French literature!" The discordant note is sounded from the Saint's wall-enclosed, mediæval city of Avila, where bishop, priest, and people have gone in procession to a solemn ceremony of expiation for the dishonor done to their unique glory.

All those who have acquaintance at first hand with the writings of that most brilliant constellation of ascetics and mystics whom the world has yet seen—the Master of Avila, Francisco de Borja, Pedro de Alcantara, Juan de la Cruz, to name only those in personal contact with St. Theresa—and who have been curious enough to trace their influence, not only in Spain, but over the whole contemplative life of Europe—in Bossuet and Fénelon and all Port Royal, in Jeremy Taylor and the Wesleys, and perhaps even in Jonathan Edwards—are sure to resent the poet's rough-handling of the Saint. She has her revenge by being a constant puzzle to the understanding of the play and the chief obstacle to its interest.

Neither on the part of poet or of critic is there any excuse for this lack of insight into the intellectual side of religious experience, since two historic works of the higher French literature—Bossuet's "Instruction sur les États d'Oraison" and Fénelon's "Maximes des Saints"—are at hand to show the "reasonable service" of St. Theresa's mind. Now the heroine of M. Mendès's poem is an evident victim of pure emotionalism, with details seemingly copied from the erotic hysteria described in the school of Charcot. The well-known verses of the Saint, with which Crashaw has glorified our English poetry, are brought into the play in a manner which makes one shudder to think what the poet would have done with Charles Wesley's "Jesus, lover of my soul."

M. Mendès, with a tone of surprise, says he has taken all from the Saint's story of her own life. Yet his presentation scarcely accorded with her unphysical vision of hell—the spirit of man confined apart from the Being who is his only End—and her conception of that higher union with God, wherein the soul may pass beyond the revealing Humanity of Christ to rest in Divinity alone.

The facts in the play are quite as arbitrary historically. Sarah Bernhardt's popping in and out of Inquisition councils and cells is not like that method of trial which, at least, was never wanting in legal ceremonies and even has its lineal descendant in the French *juge d'instruction*.

Dramatic Opinions and Essays. By G. Bernard Shaw. 2 vols. New York: Brentano. \$2.50 net.

These volumes are made up of the papers contributed by George Bernard Shaw, in his capacity of dramatic critic, to the London *Saturday Review*, between January, 1895, and May, 1898, and contain a large amount of entertaining matter. It is doubtful, however, whether the collection will prove beneficial to his reputation. Brilliant as his writing often is, with its apt-

ness of allusion and comparison, its sparkling wit and reckless audacity, it can only be thoroughly enjoyed when taken in small doses. Its affectations of a monstrous egotism, of omniscience, of hostility to all established order and enthusiasm for everything that is revolutionary or strange, its flippancy, shallowness, and not infrequent insincerity, soon pall upon the reader.

Mr. Shaw is most effective in indiscriminate attack. It is impossible not to relish the skill with which he uses the sharp weapons of mockery and ridicule, even when exasperated by the patent fallacy of his premises or the bumptiousness of his conclusions. But when he condescends, as he does sometimes in his saner moments, to dispense with his usual embroidery of whim and paradox, he can be capable of acute and searching criticism. For instance, his castigation of Pinero's plays, "The Second Mrs. Tanqueray" and "The Notorious Mrs. Ebbsmith," is thoroughly sound and efficacious, although, naturally, he is not at all concerned about the moral side of the question. He has some shrewd comment, too, on Sarah Bernhardt's later performances, but exhibits his instinctive perversity in comparing her elocution to that of Miss Ada Rehan, which he professes to deem superior. Elsewhere, in order presumably to show the independence of his judgment, he bitterly assails the acting of Sir Henry Irving in "Waterloo," which, as a bit of pure and highly finished histrionism, was one of the most notable achievements of the modern stage. The little play in itself, of course, was a trifling affair, but certainly does not deserve the contempt he pours upon it. One of the most characteristic examples of his work, strangely compounded of keen observation, just comment, and rattle-pated nonsense, is his review of "Henry IV." at the London Haymarket. But it is not necessary to go further for examples. Most persons who know Mr. Shaw at all know him pretty thoroughly by this time, and read him for amusement only, not for profit or instruction. But it is a thousand pities that his agile intellect is not ballasted with conscience and common sense.

The latest play on the subject of political corruption is "The Man of the Hour," by George Broadhurst, which was produced in the Savoy Theatre, in this city, on Tuesday evening, with good prospect of success. It deals entirely with municipal politics, and illustrates the grosser forms of graft, with a considerable measure of theatrical effect, but not much dramatic art. Mr. Broadhurst, chiefly known hitherto as a writer of farcical pieces, has committed the common error of inexperienced dramatists, in overloading his story with all sorts of startling incidents, complications, and coincidences, and his hero with phenomenal trials and virtues. But the play contains several exceedingly effective situations and some clever character drawing. The two rival "bosses" are sketched with admirable vigor and vitality, and are uncommonly well played by Frank MacVickers and George Fawcett. A capital performance of the young mayor, whom no temptation can beguile from the path of duty, was given by Frederick Perry. What the play needs most is revision by a competent playwright. It might easily be made

a work of superior quality. As it stands, it is only a creditable effort in the right direction.

The Macmillan Company publishes "Scorn of Women," a three-act comedy by Jack London, who has laid his scene in Dawson, Northwest Territory, and filled it in with the appropriate atmosphere and color. Whether it would be as effective in stage representation as it is in the reading is doubtful, as more of the story is unfolded in dialogue than in action, and the dramatic motive is chiefly conspicuous by absence. The heroine is a dazzlingly beautiful and very rich dancer, who is worshipped by all the men and suspected by all the women. But she proves her integrity, as well as her powers of allurements and intrigue, by frustrating the elopement of a faithless lover and restoring him to the arms of his betrothed, who has undertaken an Arctic journey to rejoin him. The incidents of Arctic life are portrayed with unmistakable veracity, and the humors and mystifications of a masked ball, under frontier conditions, are set forth with freshness and vivacity. In the last act there is a touch of the wild which is, perhaps, a trifle too realistic, but the piece, as a whole, is decidedly entertaining, and contains some well drawn sketches of character. A skilled dramatist probably could put it into proper shape for the theatre without much difficulty, and the novelty of it might make the experiment worth trying.

Eugène Linthilhac publishes in Paris the second volume of his giant "Histoire générale du Théâtre en France." The first reached from the Middle Ages to Corneille; The author now follows out one single evolutionary type—comedy—without reference to the other types, which upsets chronology for philosophical history. Émile Faguet has issued a third volume of his "Propos de Théâtre," all the way from Sophocles and Shakspeare to Gorky.

Music.

THE OPERA IN NEW YORK.

Oscar Hammerstein's new Manhattan Opera House was opened on Monday night with a performance of Bellini's "I Puritani," which was heard by an extremely enthusiastic audience of over 3,000 persons. The enthusiasm was not over the opera itself, which is antiquated and has nearly everywhere disappeared from the repertory (its last performance in New York was twenty-three years ago), but over the singers. This was not a new phenomenon, for from the very beginning (1835) Bellini's opera depended largely for its success on the art of the great quartet who sang it—Grisi, Rubini, Tamburini, and Lablache. Mr. Hammerstein was not able to duplicate that cast, but he did the best he could by presenting Mme. Pinkert, and Bonci, Ancona, and Arimondi in the four leading parts. Mme. Pinkert evinced great skill as a coloratura singer in "Son vergin vezzosa" and other numbers that are adorned with *fiorture*; in the simple songs her voice was unsteady, and not always true to pitch. Bonci was probably not at his best; his voice lacks the body and the

luscious quality of Caruso's, and it is not free from an unpleasant vibrato; but the use he makes of it stamps him as an artist of the highest type. Ancona has improved since he was last here, and Arimondi also sang well, barring an occasional deviation from the pitch. The acoustic qualities of the new theatre proved to be excellent for the singers as well as the orchestra. The appearance of the house is attractive. The nearness of the stage to most of the spectators is the best feature of the auditorium—*one sadly missed in most opera houses.*

The second evening of the season at the Metropolitan (last week Wednesday) was devoted to an opera which depends for its success more on its interpreters than on its inherent charms—Puccini's "La Bohème." It was sung by a cast including Mme. Sembrich, whose voice seems to have the secret of eternal youth, and Caruso, who sang beautifully. For "Hänsel and Gretel" there was a new Hänsel, Miss Mattfeld, who proved even better than her predecessor. "Tannhäuser," on Friday night, brought forward two new singers from Germany: Frau Fleischer-Edel essayed the part of Elizabeth; she proved to be one of many Teutonic artists who sing in tune and effectively as long as they can indulge in forte and fortissimo; but the soft, pathetic prayer of the third act was marred by her persistent wandering from the key, her flickering tone, her dragging, her utter lack of a legato style. A much better singer is Burrian, the pride of Dresden. Tannhäuser is perhaps the most difficult of all tenor rôles, but he sang it with a wealth of voice, an ease of phrasing, an endurance, that were little short of wonderful. His voice lacks the *Schmelz*—the sensuous beauty—of Knoté's, and what he will have to learn here particularly is the art of singing softly. As a vocal spendthrift he reminds one of the prodigal Tamagno. Concerning Monday's performance of "Marta" the most noteworthy thing is that the house was crowded, notwithstanding the counter-attraction of the Hammerstein first-night.

Fifty Shakspeare Songs. Edited by Charles Vincent. Boston: Oliver Ditson Co. \$1.50.
Early Italian Piano Music. Edited by M. Esposito. Boston: Oliver Ditson Co. \$1.50.

Amateurs are becoming more and more eager to read something about the music they hear. A century ago there were few musical periodicals, and the daily newspaper rarely paid any attention to happenings in the musical world. To-day there are few general periodicals that do not discuss the subject; and what is more, it is becoming customary to print collections of songs or instrumental pieces with literary introductions and notes, biographic, elucidatory, and critical. Of this custom a noteworthy illustration is the Musicians' Library of the Oliver Ditson Co., which was started a few years ago with a view of presenting the world's best music in beautifully printed volumes, edited by specialists, and containing ample information about the composers and their works. Twenty-two volumes have so far been issued, comprising the best works of Handel, Schubert, Schumann, Franz, Mendelssohn, Liszt, Brahms, Wagner, and others. In most of these volumes the highest standard has been maintained; the selections have been made judiciously, and in the im-

portant matter of translations of songs the Musicians' Library excels any other collection with which we are acquainted.

The latest additions are "Fifty Shakspeare Songs," edited by Charles Vincent, and "Early Italian Piano Music," edited by M. Esposito. The latter volume will prove a pleasant surprise to those who labor under the impression that all Italian music is operatic. It is true that modern Italy has produced no great pianoforte composer or player; but in the seventeenth and eighteenth centuries there was a group of writers for the piano, headed by the two Scarlattis, whose pieces come to our ears almost as novelties; some of them are as far from being antiquated as Bach's, which they resemble. In Mr. Vincent's volume there is also an antique division, comprising songs mentioned by Shakspeare in his plays and songs possibly sung in the original performances. A third section comprises songs to Shaksperian texts composed since Shakspeare's time; and the final section brings us up to date, with songs by Sullivan, Parry, William Arms Fisher, Harvey Worthington Loomis, Coleridge-Taylor, and others. As the earlier songs mostly exist as melodies only, the editor has supplied them with appropriate accompaniments, in the spirit of their time. In the second period we find such names as Haydn, who wrote a setting of "She never told her love"; Rossini, who wrote for his "Otello" a setting of "The Willow Song"; and Schubert, whose "Hark, hark, the Lark" and "Sylvia," as a matter of course, crown the whole.

A new choral work from France—"The Children's Crusade"—was produced on Tuesday evening at the first concert of the New York Oratorio Society's thirty-fourth season. It is based on a poem by Marcel Schwob, and the music is by Gabriel Pierné, to whom the city of Paris awarded a special prize for this work in 1904. The cantata—or "musical legend," as the composer calls it—is divided into four parts. In the first we are told how the children escape from the arms of their distracted mothers to set forth for Jerusalem, under the leadership of the blind Alain; in the second, we see them on a highway marching like pilgrims; in the third they have arrived at the shore of the Mediterranean at Genoa, knowing that Jerusalem lies at the end of this sea, and believing that the sea will divide itself to let them march thither; in the fourth, they are on board ship in a terrific storm and perish. This is certainly a good subject for musical illustration. The composer has succeeded in reproducing in his score the atmosphere of the several scenes; he has introduced plenty of fine effects of euphony in both the orchestral and choral parts, which are also admirably constructed. The fatal defect is a lack of original melody. The maundering arioso which takes its place soon becomes wearisome. The performance under Frank Damrosch was marked by precision and animation.

Mme. Nordica will give her only New York concert this season on January 8 at Carnegie Hall, assisted by the entire Philharmonic Orchestra, under the direction of Mr. Safonoff. She will sing Beethoven's "Ah Perfido," the "Love-Death" from "Tristan and Isolde," and an aria from

the "Götterdämmerung" with orchestra, and a group of songs with piano accompaniment. The orchestral numbers for this concert are Bizet's Overture "Patrie," and the fantasia "Romeo" by Tchaikovsky. Mme. Schumann-Heink will sing the songs of Schubert, Schumann, Franz, and Brahms at her last song recital here this winter, which she will give in Carnegie Hall on Sunday afternoon, December 9. In the Brahms group she will include his Six Hungarian Gypsy Songs, which have not been heard here in recent years; Schubert will be represented by four songs, including "Die Allmacht." Other well-known songs on her programme are: "Ich grolle nicht" and "Frühlingsfahrt," by Schumann, and "Im Herbst" and "Gute Nacht," by Franz.

A new and fairly interesting collection of letters by Richard Wagner, entitled "Familienbriefe," is published by A. Duncker, in Berlin. As the title indicates, they were written to members of his family, especially to his mother, sisters, and first wife, and furnish valuable contributions to his biography as well as faithful and mostly favorable revelations of his character. Particularly praiseworthy is his ardent devotion to his aged mother and his fine appreciation of his indebtedness to her. A vivid picture is also given of his persistent efforts to attain his ideals, and his struggles against opposition and actual destitution, as in Paris. In 1852 he writes from Zurich, where he found refuge as an exile after having been forced to flee from Saxony for taking part in the revolution of 1848: "I shall never return to Germany even if I should be pardoned a hundred times." Notwithstanding this resolution, we find him a few years later in Carlsruhe. About thirty years ago a Viennese feuilletonist, Daniel Spitzer, acquired at an auction sale a package of letters written by Richard Wagner to a dressmaker. He printed some of them in the *Neue Freie Presse*, with caustic comments. These letters have now been issued complete in a brochure by the Viennese publisher, Ernest Stülpnagel. They illustrate what was certainly the greatest of Wagner's eccentricities—his fantastic love of silk, velvet, and laces for garments and furniture.

Art.

EXCAVATIONS AT PERGAMON AND ELSEWHERE.

The excavations which the German Archaeological Institute undertakes every autumn at Pergamon, are being carried on as usual under the direction of A. Couze and W. Dörpfeld. Some of the finds will help to fill gaps in our present knowledge of the history of Pergamon. The work is going on at four different points. The greater part of the laborers are clearing the largest gymnasium of the city. This will be the third building of the kind discovered at Pergamon. The two already known, situated on the south slope of the hill, were used by boys and youths for physical exercise. The newly found building, by far the most magnificent of the three, was devoted to the exclusive use of grown men. Of its many spacious halls, the most inter-

esting is in the form of a Greek theatre, employed probably as an auditorium. Many pieces of sculpture which once adorned this gymnasium have come to light, but, unfortunately, in a rather mutilated condition. Herakles, the presiding deity of athletes, is honored with a number of statues.

Another task is the opening of several artificial mounds in the plain of Pergamon. The largest and most important is the Jigma Tepé, probably the burial place of the Kings of Pergamon. This, as far as can be determined at present, has never before been opened, so that presumably it still contains its original treasure. Whether the excavators will be able this season to penetrate to the inner part of the mound, which is 50 metres high, seems doubtful. But a number of smaller mounds in this neighborhood have already been opened. In one was found a large stone sarcophagus. The man buried in it must have been a distinguished personage, as is shown by the two swords found at his side, and the beautiful gold wreath that once adorned his head. The wreath, made of gold ivy-leaves with a dainty little Eros hovering among them, is a work of the second century B. C. It will form one of the chief ornaments of the Museum at Constantinople.

A third group of men is busy with the remains of the bridge which once spanned the river Selinus. Already it has been ascertained that three arches of great size were used in this bridge. The myth that the arch is the invention of the Romans is still widely spread; it is of great interest, therefore, to find that at Pergamon this construction was used in various forms in the second century B. C., when Pergamon was still untouched by Roman influence.

Mr. Grüber, an architect, is investigating the remains of the ancient aqueducts. He has devoted much study to this subject, and he hopes this season to finish his researches. The number of aqueducts at Pergamon is astonishingly large, and some are of extremely interesting construction. Smaller excavations are being made to investigate the extent of the royal palaces which once crowned the summit of the citadel.

The progress made is considerable, but it will probably be many years before the citadel is all cleared. Then will come the task of laying bare the magnificent ruins of the lower town, where little has as yet been accomplished.

The new director-general of the Department of Antiquities in Italy, Dr. Corrado Ricci, is to push the excavations in Pompeii, which were interrupted more than ten years ago because the excavators had reached privately owned land. Dr. Ricci has set aside 38,000 lire for the purchase of such land.

Objects of considerable archaeological value, consisting of a number of bas-reliefs, have been discovered at Yozghat in Asia Minor, in the course of excavations undertaken under the surveillance of Maeridi Bey, of the Imperial Ottoman Museum at Constantinople, and Dr. Hugo Winkler of the University of Berlin. These reliefs, with their inscriptions, are said to throw light on the civilization of ancient Babylon.

English Colored Books. By Martin Hardie. New York: G. P. Putnam's Sons. \$6.75.

This volume, one of the "Connoisseur's

Library," under the general editorial supervision of Cyril Davenport, is likely to prove of permanent value to the collector of those interesting books with colored plates, which were produced in such profusion in England during the first half of the nineteenth century, as well as to the general reader or student who wishes to know something of the various processes of printing in colors, their development, and their final results, the finished prints. Although the volume is largely devoted to English books with colored plates, it covers, in fact, the whole period from the first book containing printing in two colors down to the modern "three-color" process, which has made possible the production of cheap colored illustrations. The new art, as shown in the many books with colored illustrations produced within the last five or six years, is indeed marvellous; but the modern three-color reproductions, such as those in this book, when compared with the original plates as sent out nearly a century ago by Ackermann from his "Repository of Arts," fail in every point except cheapness.

Very early in the development of printing, large initials, cut on wood blocks, were printed with red and blue ink in the spaces left for them. Probably the sheets were not again put under the press, but the wood block was struck with a mallet. The earliest color printing produced in England, so far as can now be ascertained, is found in that production of an unknown author and unidentified printer, the first edition of "The Book of St. Albans," 1486. The volume contains 117 coats-of-arms from wood-blocks in blue, red, yellow, and olive green, with other tints added by hand. The coloring by hand of book illustrations, whether impressions from wood blocks or copper plates, either by professional illuminators or by owners of the books themselves, began with the publication of books with illustrations. The "Nuremberg Chronicle," 1493, sold unbound and uncolored for two Rhenish florins, bound and colored for six. In the eighteenth century were printed such works as Albin's "Natural History of English Insects," Mark Catesby's "Natural History of Carolina, Florida, and the Bahama Islands," Edwards's "Natural History of Uncommon Birds," with line engravings colored by hand.

The method of a separate block for each color was applied to the printing of separate plates and to wall-paper, but seems not to have been used in book-illustration in England until 1754, when John Baptist Jackson, himself a wall-paper manufacturer, published an "Essay on the Invention of Engraving and Printing in Chiaro Oscuro." Another advance in printing from wood blocks was made by William Savage, whose "Practical Hints on Decorative Printing," 1822, contains illustrations printed from as many as fourteen blocks. In 1835 George Baxter patented a process of first printing the entire picture from a plate engraved on copper, steel, or zinc, or from a lithographic stone, and supplying the color from separate wood blocks, sometimes as many as thirty. With Baxter's work, color-printing from wood blocks reached its highest development.

Simultaneously with the development through 300 years of printing from blocks, where the surface is in relief, there was similar development of printing from metal plates, where the ink is deposited in lines cut into the metal. This method, which is little used in book-illustration, but which produced the magnificent prints of the late eighteenth and early nineteenth century, is closely allied to hand-coloring. It consists in painting upon the plate itself the separate colors, which are transferred by pressure to the paper, giving a finished print for each impression. A second method, allied to that of printing from wood blocks, consisted of the preparation of several plates, each for a single color. These plates could be inked rapidly and wiped off by a mere apprentice, whereas extreme care, if not artistic ability, was required in painting the several colors upon a single plate.

As foreshadowing the modern three-color process, there is the work of Jacob Christoph Le Blon, a German by birth, who came to London in 1719. In that year he secured a patent for a "New Method of Multiplying of Pictures and Draughts." He endeavored to distinguish in the painting he wished to copy the primary colors red, yellow, and blue, and then engrave three plates, and superimpose these colors. His only book with colored plates was an explanation of his method: "Colorito. L'harmonie du coloris dans la peinture, reduite en pratique mécanique" (London, 1722). Besides the illustrations in this book, he reproduced some fifty large prints which are among the wonders of color-printing. The "golden age" of color printing was the last half of the eighteenth century, when Earlom, J. R. Smith, and the other great mezzotinters and engravers in stipple were producing those magnificent prints which are so attractive to the collector of to-day. But colored mezzotints and stipple engravings were little used as book illustrations, for their preparation was too expensive; and the plates of soft metal allowed only a few impressions.

The book before us deals primarily with English books with colored illustrations, which reached their perfection in books published by Ackermann, McLean, Boydell, and others from 1800 to 1830. In these books the plates are aquatints, from etched copper plates in one or two tints and colored by hand. Ackermann's publications may be divided into three classes, architecture and famous buildings, costume and scenery, and books with humorous plates, the latter by Thomas Rowlandson. As Rowlandson's humorous plates and Pugin's on architecture have helped to make Ackermann famous, so the books published by McLean are sought for on account of the plates of sporting subjects from drawings by Henry Alken. Some of these publications have become exceedingly scarce and costly. William Blake, unique in his genius, as in his process of reproducing his own drawings from copper plates etched in relief, deserves a book to himself rather than the chapter to which Mr. Hardie's notes are confined. Other chapters on George and Robert Cruikshank, John Leech, W. M. Thackeray, Randolph Caldecott and other modern illustrators bring the account down to our own day and "process" plates. A last chapter is devoted to the collecting

of colored books, catalogues, and prices. An appendix contains lists of plates printed by Baxter, books published by Ackermann, and books with colored plates by Rowlandson and by Alken.

The book, as a whole, is admirable. Nothing has been heretofore published covering the field as it does. The story of the development of the art is interesting and non-technical; the books described most fully in each class are typical and the reproductions of the plates, necessarily on coated paper, are as good as could be expected from the process used.

The thirteenth annual architectural exhibition of the T Square Club, held under the auspices and in the galleries of the Pennsylvania Academy of the Fine Arts, Philadelphia, is open through the month of December. The exhibition includes many of the drawings submitted in the recent competition for the Peace Palace of The Hague; the Shelby Court House, by Hale & Rogers; the Wisconsin State Capitol and the National Theatre in New York, by Peabody & Stearns; the Washington National Museum, by Hornblower & Marshall; the New York terminal of the Pennsylvania Railroad, by McKim, Mead & White; some of Henry Hornbostle's drawings of the Carnegie Institute of Pittsburgh; ecclesiastical work of Cram, Goodhue & Furgerson; and D. H. Burnham & Co.'s original sketches for the beautifying of San Francisco. There are also photographs of executed work, and drawings in color for work executed or in the course of construction. A whole room is devoted to French architects. M. Chedanne, architect to the Ministry of Foreign Affairs, shows his remarkable drawings made in connection with his study of the Pantheon at Rome, and drawings of the restoration of a Roman temple, of the decorations of a Roman house, and of his Champs Elysées Hotel in Paris. M. Duquesne shows drawings of two Italian municipal palaces; M. Lapeyrer, five drawings of his scheme for a great entrance boulevard to the city of Bordeaux. The large hall at the Academy is filled with the exhibits of the National Society of Mural Painters. Among the exhibitors are John La Farge, E. H. Blashfield, William B. Van Ingen, and Karl Newmann. The central rotunda and the gallery adjoining contain the exhibit of the National Sculpture Society, with four groups from the New York Custom House by Daniel C. French, and a model of the doorway of the chapel at Annapolis by Ernest Flagg.

The fifth annual exhibition of arts and crafts and the eleventh annual exhibition of the Society of Western Artists open today at the Art Institute of Chicago.

The municipality of Barcelona will hold an international art exhibition from April 23 to July 15. The exhibition will comprise fine arts and art crafts generally.

Four pictures by Domenico Theotocopuli, often known as "El Greco," in the chapel of San José at Toledo, have been sold to Goupil of Paris. The transaction has excited such comment that the authorities of the Spanish Government have forbidden the shipment of the pictures until a searching examination has been made into the right to sell them.

Science.

Bacteria in Relation to Plant Diseases. By Erwin F. Smith, United States Department of Agriculture. Vol. I: Methods of Work and General Literature of Bacteriology, exclusive of Plant Diseases. Washington, D. C.: Published by the Carnegie Institution.

The most striking feature in the recent development of the so-called natural and physical sciences is the rapidity with which new fields of research are being opened to investigation along the hitherto neglected or uncultivated boundaries between the sciences. For instance, between the vast domains of chemistry and physics, there is a borderland which was occasionally invaded by chemists on the one side and by physicists on the other, who brought away very interesting but generally uncoordinated results. Until lately, few students dared to call themselves chemical physicists or physical chemists, but now the territory is fairly well filled with them. These special explorers have not only found a field worth careful investigation, but they are compelling the re-investigation of the older adjoining fields. Thus the physiology which does not take into account these later researches is hopelessly out of date.

There is a debatable land between plants and animals, inhabited by microscopic organisms, many of which are of such doubtful character that the most successful as well as the boldest student who has investigated them, preferred to call them *microbes*, that is, little living things, and thus let their place in systems of classification look out for itself. This territory between the two biological sciences was formerly a favorite hunting-ground for amateur microscopists, but as many of these investigators were imperfectly equipped for their work, the results were received with more or less caution. Even the best of these early explorers did not have at command lenses and methods which could secure success. When, however, the newer lenses and more telling methods became known, exploration followed exploration surprisingly fast, and with startling results. It soon became evident that the new territory must be divided and subdivided between investigators. Some of these were more zealous than wise, and published results which it was almost impossible, offhand, either wholly to confirm or absolutely to reject. The literature grew too quickly to be assimilated by those for whom it was intended, and there were needless repetitions, often made more useless by confusion in terminology. The objects under investigation were difficult to describe in fixed terms, and there was no general consensus as to the application of technical words, so that it was often impossible to discriminate between the true and the misleading. It was in the part of the field devoted to the diseases of animals and plants that the greatest confusion existed, but this confusion was measurably disregarded on account of the beneficent nature of some of the results of the study. Our readers have been made fully aware of the triumphs in certain parts of this sub-

ject, especially the treatment of a few diseases of man; but it is questionable whether the successes in plant pathology and therapeutics have been as widely known.

Obviously it was an imperative duty of the departments of agriculture in different countries to foster these lines of investigation, and this duty has been well performed. The United States Department of Agriculture has given much attention to the subject, and the experiment stations throughout the land have made this work one of the more important features of their activity.

The author of the present volume has been one of the most assiduous in this comparatively new field. In his responsible position in Washington in charge of the laboratory of plant pathology and with a wide correspondence, he has seen that numerous students in our country are not provided with all proper appliances and are not versed in the best methods. To aid them in a substantial way, he has prepared with great care and with minute attention to detail a treatise on the right use of the necessary appliances—all of which is an essential introduction to his main subject—to be presented subsequently, namely, the diseases of plants. At first sight, the present volume would seem to many to be altogether too full of minute detail. But it must be remembered that many students whom Professor Smith had in mind do not have access to properly balanced handbooks. A large number of textbooks take a great deal for granted; Professor Smith has preferred to take nothing for granted. If this be an error, it is a useful one.

To those who care for amateur study of microscopic objects, Professor Smith's treatise affords ample advice. When we remember that the present methods of staining cells and their contents have grown out of the much-derided pastime of former amateurs who wished only to make pretty specimens, and that many of the greatest advances in modern photography have been the result of the lavish expenditure of time and money by amateurs, we can welcome Professor Smith's book, not only for its serviceableness to professional workers, but for the possible good to science which may come through its hints and advice for those who are less systematically trained.

Handbook of Polar Discoveries. By Gen. A. W. Greely. Boston: Little, Brown & Co. \$1.50.

This work of timely interest is an expansion of a publication which has done many years' service with those who follow the progress of exploration in the polar tracts. In the 325 pages of text the reader is presented, as the preface informs him, with results obtained from "more than 70,000 pages of original narrative"; and the facts, it can be readily seen, have been obtained in most cases through a conscientious appeal to first-hand authority. Gen. Greely's high standing as an Arctic authority insures reliability, at the same time that it gives special value to his personal estimate of the accomplishments of different explorers. The book follows, instead of the strictly chronological plan of most polar summaries, the topical method. While this necessitates a certain amount

of repetition, it gives on the whole a clearer picture of the geographical relations involved in researches extending through three hundred and fifty years. Of the twenty-three chapters five are devoted to the Antarctic tract. The material of this section is classified on the "quadrant system" suggested by Dr. F. A. Cook: the American, Pacific, African, and Australian-quadrants. The book is brought down to include the making of the Northwest Passage by Amundsen; but, unfortunately, it was out of the press before intelligence was received of the latest and most brilliant achievement in Arctic exploration, the 1906 journey of Peary.

In the unusually large number of data with which the book deals, the author could hardly avoid occasional slips, and it would be doing scant justice to this useful publication to lay emphasis upon minor defects. We may, however, point to a few of the more serious misstatements or misprints, some of which have crept in as the result of imperfect revision of the earlier text. Thus, we have the statement on p. 220, that the America, the vessel of the late Fiala expedition, in reaching 82° 04' N., equalled "the highest record for a ship under steam in the Western Hemisphere" (see p. 202: Polaris, 1870, 82° 11' N., etc.); on p. 231, that Low Point, 83° 07' N., attained by Lockwood and Brainard (of the Greeley expedition), was in equal latitude "with the highest-known land" (see p. 259; Peary, 83° 39'—Cape Morris Jesup); on p. 247, that Koldewey and Payer (in 1870), lat. 77° 01' N., reached "the highest point ever attained by explorers of the east coast [of Greenland]," overlooking the fact, properly stated on p. 260, that the Duke of Orleans, in 1905, attained the position of lat. 78° 16' on the same coast. A glaring misstatement (p. 231) is that Lockwood Island (83° 24') is "the highest north, then or now." It is much to be regretted that no really good map accompanies the text. Most of the maps that are scattered through the volume are rendered all but valueless, because they are much reduced in size and are out of date.

The conclusive proof that helium is produced from radium salts is explained in recent technical journals by Sir William Crookes. The experiment was performed in the usual shaped vacuum tube, constricted in the middle and enlarged at each end, through which a wire, ending in a loop, was fused. A radium salt was fused into the loops and the air exhausted from the tube. An examination of the contents of the tube by means of a spectroscope showed that there was no helium present. After the tube had stood from March until June, however, the passage of the current showed the presence of a vapor which gave the distinct spectroscopic test for helium. As the test was done in a vacuum, entire discredit is thrown upon the idea that helium is not given off from radium salts, but that radium salts "sort out" the helium from the atmosphere.

Major Ronald Ross, professor of tropical medicine in the Liverpool School of Tropical Medicine and at the University of Liverpool, recently gave an account before the Oxford Medical Society of his investigations in Greece. These were undertaken in Bœotia for the Lake Kopais

Company, on whose estates malaria has been terribly prevalent. Major Ross's local figures are only, as he discovered by recourse to the Grecian Anti-Malaria League, a specific instance of general conditions. Out of a population estimated at 2,433,806 the average annual number of cases is probably 250,000, resulting in about 1,760 deaths. He found that owing to the disease many children suffer from enlargement of the spleen; and that adults, partly immunized though they are, lose in vigor because of unhealthy childhood.

The statistical publications of the German Empire show that the great increase in the population of the country, amounting to almost 900,000 per annum, is owing chiefly to the large birth rate in the country districts, and, secondly, to the decrease in the death rate in the big cities. The absolute increase in the population of the Empire would be materially larger if the birth rate in the centres of population were not less than the average. In 1904 the average birth rate for the whole country was 35.2 per thousand, but in the cities it was not quite 30 per thousand.

Two nature books of life in California are to be published this month by Paul Elder & Co. One is "Bird Notes Afield," by Charles Keeler; the other is "The Garden Book of California," by Belle Sumner Angier.

Finance.

A BREAK IN THE "CURB MARKET."

During nearly three months Wall Street has indulged in daily excitement over the furious rise in stocks on the "curb"; at the close of last week it had a little experience in the other side of the game. The focus of interest was a group of mining shares; they went up and came down with the more violence, for the very reason that nobody knew what any of them was worth. As an incident in speculation, the affair would have possessed no broader interest than an evening party at a faro table, but for the fact that the large paper profits, so easily won, completely turned the heads of the speculative community. This result was all the more natural, because speculative appetite, on the part of the general public, was unsated, and because the enforced pause in Stock Exchange and real estate speculation, as a result of money stringency, left "the curb" the only available place to gratify the passion. Even the horse-races had ended for the season. As a consequence, not only at New York, but in Pittsburgh, Chicago, Boston, and many Canadian cities, the speculation in mines raged unchecked. At New York it actually diverted so much patronage from regular Stock Exchange houses that credit balances of customers were drawn down, new faces began to appear on the fringe of the "curb market," and respectable banking houses, tired of doing nothing on orders for the Stock Exchange, made preparations to participate on a large scale, for themselves and their clients, in the gamble on the curb.

What is "the curb"? The phrase has long been familiar in Stock Exchange vernacular. It means, first, as the word indi-

cates, a market conducted without a roof over its head, as against the dignified seclusion of "regular" brokers within the four walls of their own exchange. At London the "curb trading" is conducted in Throgmorton Street, behind the Capel Court entrance to the Stock Exchange; it begins when the Exchange has closed. When "Americans" are in active speculation, and when the climax of activity of New York occurs, say at 2 P. M., which is 7 P. M. in London, one may see the "curb market" in full swing in the darkness and fog of England's late winter afternoon, with buyer and seller barely able to make out each other's faces. At Paris, the *coulisse*—which name, properly used of the side wings of a theatrical stage, is characteristically applied to the "curb"—does its business on the portico of the Bourse, and, as in London, it deals in stocks which are also sold on the real exchange.

In New York, the "curb" is a genuine sidewalk stock exchange; rain or shine, its specialists stand on the Broad Street asphalt, roped in by the police, and sheltered in stormy weather only by a solid mass of umbrellas. But unlike the European "curb markets," it deals only in stocks not formally "listed" on the Stock Exchange. It buys and sells shares which promoters will not submit to the scrutiny of Stock Exchange authorities, or which those authorities refuse to admit to trading. Standard Oil stock belongs to the first-named class; a host of raw industrial or mining projects belong to that last mentioned. Into this curb market came the numerous "mining propositions" of our own far West and, recently, of Canada.

The filip to the upward movement and to the general craze was given this season by the Nipissing Mine, a Canadian property yielding cobalt and silver. In the course of a few weeks, at the beginning of this autumn, shares of this stock rose from the neighborhood of \$5 per share to \$34, an advance of nearly 600 per cent. Along with Nipissing, other mining stocks rose 50 to 100 per cent.; every one on the curb was making money. No one knew anything at first hand about the value or earning capacity of these properties; speculation was merely fed on promises. But the case of Nipissing was peculiar, in that a New York mining house of high standing was negotiating to buy control, and at length announced, a few weeks ago, that it had signed a contract to take a large holding at \$25 per share. Estimates of respectable mining engineers, published along with this announcement, indicated much greater value than the "option price"; hence the willingness of the curb to pay \$9 per share more than the Messrs. Guggenheim contracted for. The inference was drawn that in any case, the stock could not fall below the contract price of \$25.

Even on the curb, appearances are deceitful. Last week the stock broke heavily; on Saturday, it actually went below 20. After the close of business, the explanation came. Something was the matter with the title to the mine; the Guggenheims had withdrawn from their contract, and declined to have anything further to do with the property. The stock has since been down to \$14.50 and with it, the price of other "mine specialties" crumbled. If Nipissing could lose 60 per cent. of its

value in a fortnight, what was to be said of the rest? From the Stock Exchange point of view, a "panic on the curb" is a tempest in a tea-pot; but the losses are quite as real as in a "Northern Pacific panic," and, measured by percentages, they were considerably heavier. Most people, too, would be surprised to know how widely such losses fall in the community at large.

The rather obvious and exceedingly trite moral is, that the investor or the speculator will do well to know something about the stock in which he trades. When he buys because his friend or his broker "gives him a tip," he is relying on advisers who probably know no more about the thing than he. When he follows the purchases of an "inside capitalist," he is very likely to be helping to make the market on which the astute "insider" can sell out. But the human mind is such that the simple outsider—the "tenderfoot" of Wall Street—always expects to sell out his own stock on the "inside manipulator," and at the top price of the market.

BOOKS OF THE WEEK.

- Adams, John Coleman. An Honorable Youth. Boston: Universalist Publishing House.
- Barker, E. The Political Thought of Plato and Aristotle. Putnams.
- Blackmore's Lorna Doune. Edited by W. P. Trent and W. T. Brewster. Boston: Ginn & Co. 65 cents.
- Bölsche, Wilhelm. Hackel: His Life and Work. Philadelphia: Geo. W. Jacobs & Co.

Ideas for Christmas

"YES, DO YOU SEND ME A BOOK."—Dorothy Wordsworth to Coleridge.

CHATEAUX OF TOURAINE. The season's art book—a superb gift for travelers or art lovers. Its beauty, artistic value, and scholarly tone make its giving a delicate compliment. Illustrated in color by Jules Guérin. \$6 net, postage 27 cents.

LINCOLN THE LAWYER. A work of fresh interest and permanent value to every American—its reading indispensable to a correct view of Lincoln's life and character. By Frederick Trevor Hill. Illustrated. \$2 net, postage 14 cents.

THE THUMB-NAIL SERIES solves the problem of a slight remembrance. Beautiful little classics (more than thirty in all) in embossed leather bindings. The most exquisite little books ever made,—philosophy, poetry, romance, etc. New issues, Hale's "The Man Without a Country," Emerson's "Friendship" and "Character," and the Book of Proverbs. \$1 each. Put up in a box. Send for complete list.

SEEING FRANCE WITH UNCLE JOHN. It means a merry Christmas to the recipient, Anne Warner's new book of humor, rightly called "a new 'Innocents Abroad.'" Delightfully illustrated. \$1.50.

HOW TO STUDY PICTURES. The most satisfying, comprehensive, suggestive work of its kind. The friend found of pictures will find it an invaluable companion. By Charles H. Caffin. Fully illustrated. \$2 net, postage 19 cents.

ITALIAN VILLAS. Edith Wharton's text with superb pictures in color by Maxfield Parrish. Just the gift for a person fond of a garden. \$6 net, postage 27 cents.

AUTOBIOGRAPHY OF ANDREW D. WHITE. One of the world's great biographies—a model of proportion, of simplicity, of vividness. Illustrated. \$7.50 net, postage 45 cents.

QUEEN SILVER-BELL. By Frances Hodgson Burnett. A unique and charming book of fairy stories for children. Illustrated in full color by Harrison Cady. 60 cents.

All the above are sold at all bookstores and are published by
THE CENTURY CO., UNION SQUARE, NEW YORK

RACKETY-PACKETY HOUSE. The second book of fairy stories by Frances Hodgson Burnett. Clever and charming. Illustrated in full color by Harrison Cady. 60 cents.

DON-A-DREAMS. A novel by Harvey J. O'Higgins. A book like "Sentimental Tommy" but the Boston Transcript likes it better. \$1.50.

GEORGIE. A gift for a young man or a girl. "Georgie" loves a different girl in every chapter. By Dorothea Deakin. Illustrated. \$1.50.

UNCLE WILLIAM. Jennette Lee's story of an old Nova Scotia fisherman, a new and beautiful character. A book that makes one the better for the reading. \$1.

THE LADY OF THE DECORATION. As sweet a love story as any reader could wish for, the scene laid in Japan. A charming gift. \$1.

A BOOK OF MUSIC. Richard Watson Gilder's new volume of poems relating to music. \$1 net, postage 4 cents.

BURNETT'S (MRS.) BOOKS OF FAIRY STORIES. See under "Queen Silver-Bell" and "Racketty-Packetty House." Illustrated in full color. 60 cents each.

THE CRIMSON SWEATER. A new popular athletic story by Ralph Henry Barbour, author of "For the Honor of the School." Just the gift for a boy. Illustrated. \$1.50.

BIBLE FOR YOUNG PEOPLE. The King James Version, with new chapter arrangements, and with genealogies, etc., omitted. Beautifully illustrated. \$1.50.

BOYS' LIFE OF LINCOLN. By Helen Nicolay, based upon Hay and Nicolay's standard life. A perfect gift for a young American. Illustrated. \$1.50.

PINKEY PERKINS. "Pinkey Perkins: Just a Boy," and "Further Fortunes of Pinkey Perkins," by Captain Harold Hammond, U. S. A. You make no mistake in choosing these for a boy. Illustrated. \$1.50 each.

THE ANNUAL PERPLEXITY

of the holiday season will be only a minor embarrassment if you consider the value of a year's subscription to **THE NATION** as a Christmas gift.

THE NATION, founded in 1865, aims to report each week the intellectual progress of the world, and its files are an incomparable library of contemporary history and politics, scientific development, pertinent financial commentary, and impartial and scholarly criticism of art, literature, and the drama.

SIX MONTHS' SUBSCRIPTION FREE.—The Publisher of **THE NATION** will extend six months the term of any subscriber who sends the name of a new subscriber with the remittance for one year's subscription.

The Nation.

NEW YORK, THURSDAY, DECEMBER 13, 1906.

The Week.

The award of the Nobel prize of \$40,000 to Theodore Roosevelt is a proper recognition of his success in bringing about peace between Russia and Japan. This is the finest of President Roosevelt's achievements, and the one for which he should be longest remembered. In every land this award will be applauded, nowhere, however, more warmly than in this country, which is a sharer in the honor to its Chief Magistrate. With admirable public spirit and tact he has decided to devote the money to the cause of industrial peace. The prize will also, we trust, modify his own conventional ideas about the necessity of being armed to the teeth, and will set his thoughts more strongly than heretofore in the direction of amity between nations. At the coming Hague Conference he has a unique opportunity to startle the world by humanitarian proposals for disarmament; he is peculiarly in a position to lead in some long step toward relieving the poor of Europe from the crushing burdens of militarism.

President Roosevelt often speaks and acts as if in his conception an efficient government is that of a benevolent autocrat—not a mere executive, checked by a legislature and a judiciary, and hemmed in by rigid laws. When routine administration under law allows perpetration of a wrong, he would step in, *deus ex machina*, and make the cause of virtue triumph. This notion of his has never been displayed more clearly than in his special message to Congress asking authority to dismiss naval officers whenever he sees fit. The case which has incited him to this extraordinary step is that of a paymaster who, becoming drunk at a dinner in a Yokohama hotel, on May 9, 1905, behaved indecently in the presence of a number of ladies. When this officer was tried in January, 1906, the court-martial plainly came short of duty, for, instead of dismissing him, it merely reduced him to the foot of the list of paymasters and prescribed a public reprimand. In human institutions such failures are inevitable. "I think there is no danger that this power would be abused," says Mr. Roosevelt, in making his request for absolute authority. His consciousness of his own rectitude is thus only surpassed by his confidence in his unknown successors. Moreover, he wrote this message at the very moment when thousands of Americans were

warmly protesting because he had ended the military careers of 150 innocent soldiers, because he could not get hold of "from nine to twenty" guilty men. This was so grave an error that it may fitly be characterized as an abuse of power. The President, too, has plainly neglected the naval officers' point of view. The law to which he objects was demanded by the army and navy jointly as security that officers should be deprived of life commissions only by due process of law. And why not the Army if the Navy? And the Revenue Marine? If executive dismissal will extirpate all evil growths, why limit it to the Navy?

The Secretary of the Navy recants this year his last year's belief that we have warships enough, and he thinks it well to have two more battleships. His change of mind is due to the failure of certain expectations that foreign nations would limit their fleets, and to another mysterious reason, no reference to which shall slip from his pen. The rest of his annual report is of interest because it endorses highly the recommendation of the Personnel Board, which has been sitting all summer with a view to regulating the flow of promotion; and because it favors also a radical reorganization of the Navy Department. A more sweeping change in the corps of officers has never been proposed at any one time, unless it be the amalgamation of the line and the engineers. In urging a reorganization of the Navy Department, Mr. Bonaparte favors placing all the bureaus which have to do with *matériel* under one head and those relating to the personnel under another. The first group will comprise the bureau of yards and docks, equipment, construction and repair, steam engineering, and ordnance. In the other will be the office of the Chief of the Navigation Bureau, the Surgeon-General, Paymaster-General, Commandant of the Marine Corps, and the Superintendent of the Naval Academy. From the point of view of business method and fighting efficiency, much is to be said in favor of the suggested change. But the heads of these two sections will have enormous power—much greater than that of the present Chief of the Bureau of Navigation, who, in the eyes of many officers, has had far too much control over the destinies of individuals.

The annual reports of the Secretary of the Treasury have long been largely given up to discussion of the currency and exposition of projects of reform. Nothing, in fact, could better prove the hodge-podge character of our past finan-

cial legislation, as a whole, than the fact that, for nearly half a century, the annual Treasury reports have almost without exception advocated a change in existing law. Secretary Shaw, in his first report, 1902, argued for a banknote currency based on general assets, remarking that he did not believe it necessary to make the currency thus issued a first lien on assets, and that the new plan "would not preclude the continuance of the present national bank currency." A year ago, he proposed additional issues of banknotes, equal to 50 per cent. of outstanding bond-secured circulation, but subject to a tax of 5 or 6 per cent., with a view to early redemption when no longer needed. Since Secretary Shaw's report of 1905, committees of the New York Chamber of Commerce and the American Bankers' Association, have, as we noted on November 22, joined in formulating a plan which includes the main principles of these Treasury propositions. But now the Secretary seems to have abandoned his currency reform plan of a year ago, and the modification of it proposed by the bankers, in behalf of a plan of sheer paternalism in the money market. He revives the ideas which he has enunciated from time to time regarding bank reserves, and their regulation in the discretion of the Treasury. In this view he is, we think, governed by wholly erroneous notions of the money market, which lead him to a mischievous inference as to the proper functions of the Treasury. His fundamental argument seems to be that Wall Street call money rates of 25 or 50 per cent. are evils *per se* and unnecessary evils at that; therefore, the banks ought to combine to suppress them, and if the banks will not do so, the Treasury ought to intervene. For ourselves, this strikes us as sitting on a safety valve. Mr. Shaw's ideas on paternalism in finance are summarized in this extraordinary paragraph from his report, which we reprint without further comment:

If the Secretary of the Treasury were given \$100,000,000 to be deposited with the banks, or withdrawn as he might deem expedient, and if in addition he were clothed with authority over the reserves of the several banks, with power to contract the national-bank circulation at pleasure, in my judgment no panic as distinguished from industrial stagnation could threaten either the United States or Europe that he could not avert.

The United States Civil Service Commission, in its annual report, confirms the press dispatches regarding the difficulties of the Government in filling its competitive positions. People still take the examinations, it appears, but from

40 to 60 per cent. of the highest eligibles on the various lists decline appointments. "The Government cannot hope to compete with private employers," says the Commission, "unless it pays salaries that measure up fairly well to the standard of private business." In order to make Government positions more attractive, a bill has been introduced increasing the salaries of civil employees by 10 per cent. The complaint of this class does not, however, come alone. Congress is coming to the point of raising the salaries of its own members. A Cabinet officer has embodied in his annual report an allusion to the inadequacy of his pay. Generally speaking, there is not a man in public position, high or low, who does not make a convincing demonstration that, on a basis of the private demand for like services, he ought to receive more than he does. Logically, we should expect the announcement that the Government machinery is inadequately manned. Yet the specifications in regard to the present labor famine are not alarming. To say that Government salaries have not been adjusted to meet the present cost of living, is merely stating one of their shortcomings. They have not properly been adjusted at all. Most of them "just growed." And the man really to be pitied is not the ambitious outsider, whether he be a candidate for a Cabinet post or a rural free delivery route, but the sheltered clerk who entered the service in the days when the salary looked larger, and to-day can neither have it enlarged nor summon the initiative to go elsewhere.

The Isthmian Canal Commission announced on Saturday a "postponement" till January 12 of the opening of bids for the completion of the Panama Canal. This is the officially optimistic way of confessing that no bids had been received, and that none would be received by the date originally fixed, December 12. Moreover, it is stated that "certain changes" in the form of contract are to be made. These are due, it is explained, to the suggestions of "a number of contractors." This again is the polite way of saying that the old form of contract was impracticable. Among the sweeping alterations now to be made in this contract, which last summer was flawless and would be changed to suit no one, are: (1) Reduction in the amount of the bond required; (2) relief of the contractor from liability for defective material, throwing upon the Government the expense of replacing any that may be discovered; (3) a Government guarantee to cover fluctuations in the wage scale on the Isthmus; and (4) a stipulation by the Government that no contractor shall be held in loss on account of faulty engineering data. This last point is crit-

ical and ominous. Prospective bidders, it is admitted, have been so disturbed by the engineering uncertainty of the plans adopted by the Government, that they would not undertake the work without a guarantee that the Treasury should stand the loss, if any resulted from that cause. It is understood that these technical doubts relate mainly to the borings for the great Gatun dam, and to the construction of three locks in flight at that point. How serious is the latter difficulty, may be seen by running over the testimony of various engineers before the Senate Committee last spring.

A "standpat" Congress refused last year to allow the free entry of Canadian lumber for the rebuilding of San Francisco. Therefore, Oregon and Washington have been drawn upon for the exceptional demand. But the American tonnage—which alone can carry freight from one American port to another—is so inadequate that rates have already risen from \$5 or less to \$9 per thousand feet, with a prospect of \$10. Meanwhile, there lies idle an abundance of first-class foreign shipping. These foreign ships cannot carry lumber to San Francisco under their present register, nor can American capital buy them and apply them in this vitally necessary work. The only practicable plan is explained by the Portland *Oregonian*, in the case of the British steamship *Duneric*. This vessel has been chartered by Portland capital, and will be sent to British Columbia, there to load with lumber for San Francisco, at freight rates of \$6 per thousand feet, which, plus the duty of \$2, will still be less than the charge for carrying native lumber from Portland to San Francisco under the American flag. If it were a case of foreign-owned freight-car or wagon or wheelbarrow, Americans would simply buy and use it. But as it is a ship, it must be sent first round Robin Hood's barn, and, after all, deliver lumber not cut in American mills.

The promotion of John W. Riddle, now Minister to Rumania and Servia, to be Ambassador to Russia, is thoroughly deserved. He never gave large sums to the Republican campaign chest, or owned a newspaper, or wielded great political and social influence; hence he will be, among our Ambassadors, almost in a class by himself. "Because he represents the simple life," is one reason now given for his appointment. A far better one is that he has worked his way up from a secretaryship by sheer merit. A remarkable linguist, devoted to the diplomatic service in which he has now been a round dozen years, he has shown conclusively that the United States can get men of the right type to fill the entire diplomatic service

just as soon as it offers a permanent career and pays suitable salaries.

The Pope's seeming rejection of all compromise with the French Government on the question of Separation has undoubtedly precipitated as grave a crisis as any Ministry has been compelled to face since the establishment of the Third Republic. Should the deadlock turn out to be as obstinate as would appear from the declarations of both the Vatican and the Cabinet, the country would be confronted by civil dissension at a time when external relations are enough of themselves to cause the Government much anxiety. Yet it is the very necessity of maintaining the country's position in the present delicately adjusted balance of European politics that may impel the French Government to find means for avoiding actual war with the Church, while maintaining the Separation Law in its substance. Nor is the Church bent on actual violence. So far as may be gathered from conflicting dispatches, the resistance of the French Catholics is to be passive in nature. It is said that "parish priests, vicars, etc., must remain passive, and may not cooperate in any act of sequestration; but if the bishop considers that the refusal of the treasurers to surrender the keys may cause grave consequences, he can permit them to do so." And, again: "Bishops may authorize Catholic officials to participate in sequestrations, if the refusal would endanger positions necessary for the maintenance of their families." Neither side, we believe, should be desirous to provoke a collision—the Government, because crises often mean ministerial changes, and the Vatican, because a religious war, in the present temper of the country, would not redound to the permanent interests of the Catholic Church. It is significant that the Pope's decision should have been withheld till the new French law was on the point of going into effect. Such high dignitaries as Archbishop Lecot of Bordeaux and Cardinal Richard were allowed to put forward measures of compromise which they are now compelled to repudiate. The Government may find this summary overriding of the peaceful efforts of French ecclesiastics by the Curia a powerful weapon in the campaign against foreign dominance in French affairs.

One Ministry after another falling on the anti-clerical issue, the King alarmed, and the people on the verge of riotous outbreaks—such is the news from Catholic Spain. Yet signs of a political movement against the privileges of the Church have long been visible. It is not only the Republican or anarchistic element, as in Catalonia, that has now to be reckoned with; there is evidently a deep and widespread feeling that the

civil power must assert itself against the ecclesiastical. The intellectual alienation from the Church has long been evident in Spain, and, of late, the antagonism has seemed to be striking down. One recalls the popular excitement which Galdós's mildly anti-clerical play, "Electra," provoked. The large sale and vogue of a tirade against the Church which its author, Ibañez, called a novel and published under the title "La Catedral," had a similar ominous significance. That the political result will be some form of legislation directed at the prerogatives of the Church, along the lines of the French law, though probably not so extreme, now appears to be certain.

Sharp differences of opinion at the congress of Italian Socialists lately held at Rome were taken by many as a sign of weakness and break-up. But a writer in the *Nouvelle Revue* asserts that the result was really a triumph for the moderates. There is a party of reform which constitutes the Right. It preaches the emancipation of the proletariat by means of education and instruction. It does not advocate any particular political régime, but opposes clerical influence, urges the reduction of the military establishment, and favors universal suffrage. The "Syndicalists" compose the Left. They seek to propagate revolutionary collectivism; they advocate the general strike, and demand the substitution of "an armed nation" for the present standing army. The Centre is represented by the "Integralists," who seek to compose the differences between the extremes. At the congress, however, the Syndicalists were defeated by a coalition of the two other parties. The programme upon which these agree puts social reform above political agitation, and this distinguishes them from the earlier Republicans, who believed that a change in the form of government was of the first importance. During the last twenty years there has been a rapid development of Socialism in Italy, due, according to the writer in the *Nouvelle Revue*, to the wretched condition of the working people, especially in the south and in the agricultural districts. But it happens to be in the north that Socialism has been most successful. As was pointed out fifteen years ago by Leroy-Beaulieu, the socialistic unrest in Italy really arises from the fact that there has been great improvement in the condition of the working classes, and the reforms already accomplished make them eager to achieve larger results.

An aspect of socialistic experiments, often overlooked, is brought forward by F. T. Bullen in the *London Spectator*. The common notion is that public relief works, old-age pensions, support for

people who are out of employment, and similar socialistic enterprises, take money from the rich and give it to the poor—a blessed levelling of inequalities. Not so, says Mr. Bullen. The rich are not the chief sufferers from these attempts at equalizing, "but the large and almost unconsidered class of workers, just kept on the weather side of want by incessant work." These are the people who feel the pinch of increased taxes, an increase that is distributed through the community in a rise of rents, as well as in the price of all the necessaries of life. "I have heard Lady Warwick assert at a banquet," adds Mr. Eullen, "that it was the duty of the state to feed and clothe as well as educate every child of the poor, and I longed to ask her what she understood by the state." She evidently had in mind the people of wealth; but Mr. Bullen argues that in London the state means "the humble workers who are willing and industrious, and who dread the pauperization of themselves or their children more than death, yet who are gradually crushed down into that bottomless pit by the ever-growing burden of rates expended by utterly irresponsible men of the type of Mr. Will Crooks and Mr. George Lansbury, and women like Lady Warwick." In this country we have not gone so far; but many persons of fine humanitarian impulses, who sympathize deeply with the miseries of the poor, urge us to follow the example of New Zealand, Australia, Germany, and England. But before casting their votes for such policies, they should examine the problem more deeply and discover the ultimate incidence of the taxes for their well-meant projects.

German colonial affairs have inevitably taken much of the time of the Reichstag's present session, and the recent six days' debate put the Government to its trumps. Fortunately for its prestige, it had already begun to clean house; and the new Director of the Colonial Bureau, Bernhard Dernburg, was able to present his plans and achievements so vigorously as to demolish many of the criticisms directed against him and his office. Von Bülow stood by his new subordinate with all possible loyalty, and the result is distinctly a triumph for the Government. The gravest accusations of cruelty and mismanagement were made by Bebel and by Herr Roerens, one of the leaders of the Centre. The latter produced, as proof of barbarity, a heavy cane which in one colony had been used in beating the natives. Over this aspect of the colonial failure Herr Dernburg was fain to glide easily; nor would it be just to hold him responsible for the misconduct of men appointed by his predecessors. Yet the need of reform in the treatment of the natives neither Herr Dernburg nor

any one else can deny; in this respect the German colonial record is black, and Bebel's assertions are not to be brushed aside with a mere charge of exaggeration.

The most significant passage in Jacob H. Schiff's plea at the Zionist mass-meeting, in this city Sunday night, was addressed to the secret agents of the Russian Government, of whose presence in the meeting the speaker felt convinced:

I say to you, is it any wonder that the Jews in Russia have become revolutionists? It is not himself that has made the Jew a revolutionist; it is the Russian Government.

This is a clear admission that the Jews in Russia have become revolutionary. There has always been a pronounced tendency to slur over the part played by Jews in the present Russian disorders, with the benevolent object, no doubt, of representing them as the innocent victims of a murderous autocracy. Especially after the different *progroms*, the sympathetic press has been at pains to refute all stories as to the responsibility of Jewish revolutionaries for the outbreak of massacre. It is true that the victims are for the most part innocent and inoffensive, but it is no service to their cause to evade the fact that the Russian Jews are the main support of the revolution, and the most dangerous enemies of the existing régime. This only serves to bring out in a clearer light the iniquities of a system that has driven an entire people to desperate resistance, not only Jewish socialists and agnostics, but even that large part of the race which is capable of cherishing so idealistic a dream as Zionism.

Increase in the consumption of absinthe is causing some uneasiness in Europe. In Belgium, a law has lately been passed forbidding its manufacture, importation, transportation, or sale. A similar measure was adopted in the Canton of Vaud, by a popular vote. The Catholic Congress of Fribourg passed resolutions approving this Swiss initiative. In the *Journal des Débats*, Dr. Daremberg states that in 1884 France consumed absinthe to the amount of 49,335 hectolitres; in 1894, 125,078, and in 1904, 207,929. It is said that the absinthe habit prevails especially among the younger literary folk; but it is spreading rapidly among business men. The habit increases the liability to tuberculosis, for most patients in the consumptive hospitals in France have been absinthe-drinkers. The subject is one of interest in the United States also; for during the last twenty-five years there has been a considerable increase in absinthe drinking here; it is usually taken in the form of vermouth, which is an infusion of absinthe in white wine.

ROOSEVELT VS. STORER.

If an old judge of Chancery were to sum up this case, he would begin by saying that it never should have been taken into court. It is the kind of personal squabble which is occasionally aired in public, but which the principals, especially if they are high in office, should scrupulously hide from the gaze of the curious. Many of the letters should obviously not even have been written; the thought of publishing them should have filled all parties to the controversy with dismay. The President truly says that this rushing into print with private correspondence is "a peculiarly ungentlemanly thing," although he thereupon proceeds to quote personal letters of Mrs. as well as Mr. Storer. Mr. Storer and his wife displayed shocking taste—the point of diplomatic propriety never seems to have occurred to them—and the lamentable thing is that Mr. Roosevelt did not concede them a monopoly of it. By such a course his personal and official dignity would have been much better conserved. As it is, Americans are mortified, and foreigners are aghast at this exhibition of official manners.

The correspondence is out, however, and attentive reading of it shows that, on the merits of the public controversy (as distinct from the personal wrangling) some points are scored by each side. Mr. Roosevelt is able easily to put Mr. Storer in the wrong in the matter of the letter to "Dear Bellamy" of January 29, 1904. It was not a condonation of the Vatican intrigues, as Mr. Storer asserted; the President clearly proves that the "closed incident" was a different affair altogether.

In other respects, the President comes off badly. His indiscretion was amazing. He writes a letter to Mrs. Storer, which he himself afterwards confesses was filled with imprudences, and in it says to her, "While I would not like to have this letter published, you are most welcome to show it to any one you see fit." That was the letter in which he railed at "Protestant fanaticism." In another one, he paid his respects to "Methodist clergymen of the fool type." To put such phrases at the disposal of a woman like "Dear Maria," was giving dynamite to a child for a plaything. It was not long before Mr. Roosevelt was alarmed to hear that Rampolla had copies of his letters. At once he wrote in a tremor to Mrs. Storer, "I did what I ought not to have done in writing you that letter. . . . Can you not reclaim any copy of my letter?" Afterwards this grew into a demand: "I must ask you to return to me all of my letters in which I have spoken on any of these ecclesiastical subjects." But the mischief had already been done.

The President's angling for the Catholic vote also appears unpleasantly in this correspondence. His admiration for

Archbishop Ireland was plainly mingled with hope of political support. "You may be interested to know," he writes from Albany in 1900 to Catholic Mrs. Storer, "of the large percentage of Catholics . . . whom I have placed upon the various important commissions in this State." Later, he said that he had "accumulated an enormous quantity of Catholic intimacy. I do not think it is exactly support; it is rather a desire to be supported." With all this, it is not strange that Mr. Storer came to imagine that the President's interest in the promotion of Archbishop Ireland was largely political, or that he should have written anxiously in 1904: "In 1896 and 1900 we got perhaps more than half of the votes of the members of my Church. Are we going to keep them?"

The worst single blow that the President gets in this unhappy dispute is where he directly raises an issue of personal veracity. Mr. Storer had asserted that, in 1903, at Oyster Bay, "the President said to me that if I went to Rome he would like to have me see the Pope, and say to him in person that the Archbishop was his friend, and that he would be pleased to hear that he had received the honor of promotion to the Cardinalate." This the President roundly denies. He says that it is "not only an untruth, but an absurd untruth." Mr. Storer, however, has a corroborating witness—no less a person than Archbishop Ireland himself. The Archbishop wrote to Mrs. Storer of an interview which he had, shortly after, with Mr. Roosevelt at Oyster Bay, and explicitly declared:

The President said to me, "Mr. Storer has told you what I said to him about you, Archbishop?"

I replied, "I do not remember—"

"About his going to Rome?"

I said, "No."

"Well," he said, "I told him I would not write a letter to the Pope asking for honors to you, but I said that he could go to Rome and say, *viva voce*, to the Pope how much I wish you to be Cardinal, and how grateful I personally would be to him for giving you that honor."

The whole is a mournful affair. If the President has any more of this dirty linen in his basket, we hope that Taft can be made to sit on the cover. A democratic people is not too fastidious, but it does want those whom it honors to observe the common proprieties of private and public life. The incident may give fresh reason to apply to the President the description which Froude gave in his "Cæsar" of the younger Cato:

No one ever suspected him of dishonesty or corruption. But his excellences were not of the retiring sort. He carried them written upon him in letters for all to read, as a testimony to a wicked generation. . . . And no one was permitted to differ from him without being guilty rather of a crime than of a mistake.

THE POOR OLD CONSTITUTION.

In his annual message, President Roosevelt recommended two Constitutional amendments; and many persons are complaining that the Constitution is as worn out as the stockings of Martinus Scriblerus, or at any rate requires as much patching. In the last *Atlantic*, Dean Melville M. Bigelow, of the Boston University Law School, holds that the Constitution does not permit the successful prosecution of corporation criminals. "Framed in the atmosphere of the eighteenth century," he alleges that it "turns the prosecution into a mock suit." His position is not unlike that of the editors of the *Yale Review*, who asked, in their November issue, the question:

Have we not reached the point at which we should frankly acknowledge that some details of the Constitution are no longer adapted to modern conditions, and instead of pursuing the demoralizing policy of changing it by construction, should openly and distinctly consider the question of amendment?

There's the preliminary rub. Even granting that Constitutional amendments may be desirable, the difficulty of securing them is practically insuperable. It took the great passion of the Civil War to carry through the last ones adopted, and reasonable men have given up hope of seeing others written into the organic law, unless some new national emergency, or agony, shall furnish the pen. The elaborate machinery of amendment, or repeal, was intended to provide against too easy change; and it does so effectually and, we think, wisely. Congressman John Sharp Williams read a pointed lesson, the other day, to his fellow-Southerners who have been prophesying smooth things about getting the Fifteenth Amendment repealed. He told them with great plainness of speech that, if they were sincere in their glib talk, they were living in a fool's paradise, since there were practical as well as moral obstacles in their way which they could not possibly surmount. Even in so powerful and popular a movement as that for the direct election of United States Senators, the tendency is now all away from a Constitutional Amendment, and in the line of political remedy. By making Legislatures in practice merely agents to record the will of the people in the election of Senators, like the Electoral College in the election of President, the country may go directly to the desired result without the long struggle and hope deferred of an attempt to amend the Constitution.

This fertility of political resource in the American people, so often shown in making the old form fit the new need, is one of the consolations we may have in the possession of a "rigid" Constitution. But even making no allowance

for that, is our plight so grievous as some would have us think? Are the faults of which people complain so much in the Constitution itself, as in the failure of Congress to make full use of the powers granted by the Constitution? No Constitution is self-executing. It is "the laws made in pursuance thereof" that do the business. And if the Federal statutes do in any respect fail of the great purpose "to establish justice," we should apply to law-makers before calling upon Constitution-tinkers.

There seems to be no doubt, for example, that penal legislation by Congress could be made to meet the defects in the Federal prosecution of crime to which Dean Bigelow refers. Congress can define the crime, and fix its punishment. It can bestow jurisdiction; provide for the expediting of cases; extend or refuse immunity to witnesses. Weaknesses which are found in the statutes enacted one year, can be cured the next. Thus we have had the imprisonment clauses put back into the Elkins Anti-Rebate act; and though the benevolent Senator from West Virginia was positive in 1903 that no convictions could be had if the guilty were liable to go to jail, to jail some men have since gone under that law. They have found that the Constitution of the United States was not a worn-out and moth-eaten document.

It is, of course, for the purpose of obtaining uniform legislation throughout the States on the subjects of labor in factories, education technical and general, child labor, marriage and divorce, and so on, that the chief demands for Constitutional amendment arise. But the eager amenders overlook three things: (1) the great advantage of the varied and experimental laws of the separate States; (2) the fact that differences in social and economic conditions may warrant differences between State laws; and (3) the power we have of coming to practical agreement and efficient uniformity without depriving the States of their local control. It is now common to call State laws "a chaos of conflicting statutes"—to use the President's phrase. But keen students of comparative legislation, like Prof. A. V. Dicey, still think of them as most valuable and instructive. It is a cock-sure legislator who should want his notions made universally binding, without first giving them a trial, in different forms, in different localities. And the penchant for making all Americans exactly alike would, if given free scope, destroy that deep unity under surface variety which has hitherto been our glory. Our ideal of national education, for example, is not that of the French Minister of Public Instruction, whom Matthew Arnold interviewed, and who drew out his watch and said: "At this moment, every child in France is studying dec-

imal fractions." As even President Roosevelt admits, referring to laws regulating the labor of children and of women: "Each State must ultimately settle the question in its own way."

This does not mean, however, that we may not have humane movements and associations, overlapping State boundaries, and endeavoring to work out a national consensus of a sort which enlightened States may write into their laws. Many such exist, and their influence is daily widening. In congresses for divorce reform, and conferences for the protection of children, and other bodies of the kind, there really lies more hope of permanent moral and legal betterment than in all the plaints about a Constitution outworn.

THE TARIFF AND TAXES.

The more one thinks of President Roosevelt's suggestion of new taxes, the more unfortunate does it seem that he had nothing to say about the abolition of old ones. Historically and logically, the income tax goes with the remitting of tariff taxes. This was the rationale of Mr. Gladstone's famous first budget of 1853. He struck off a large number of existing taxes. They were oppressive, in that, like the soap-tax, for example, they bore more heavily upon the poor than the well-to-do. Other taxes fettered trade. To enable him to remove them, while lightening the load of taxation in other ways, was Gladstone's great object in imposing the income tax. He plainly stated his plan to be one for wiping out grievous and unequal taxes, and at the same time for expanding commerce.

Such was also, roughly, the purpose of the income tax in our own tariff of 1894. The aim was to lift the load of indirect and demoralizing tariff taxes; to strike off as many as possible of the tariff chains upon industry and trade; and to make good the resulting deficit in the revenue by levying an income tax. Viewed in that light, the process is rational. It makes the income and inheritance taxes appear, not as a socialistic device to reduce "swollen fortunes," but as a means of cutting away swollen privileges—bloated monopolies built up under the tariff. In the hands of a thoroughgoing tariff-reformer, the proposal of such taxes has a direct relation to the legitimate ends of Government at which he aims. Congressman James Breck Perkins of this State, for instance, who has introduced a bill for a national inheritance tax, had before declared himself, Republican though he is, strongly in favor of tariff revision. This gives him an air of consistency as a taxer, and of sagacity as a statesman.

On the other hand, the levying of any new taxes without the repeal of some existing, and without careful adjust-

ment of fiscal policy to the needs of the country's trade, would be unwise from every point of view. The people are already overtaxed. The Treasury surplus is too large, whether considered as so much money locked up, or as a temptation to extravagant appropriations. With the Secretary estimating a surplus of \$58,000,000 in the next fiscal year, on the basis of present law, it would be preposterous to enact new taxes to swell it.

That there are vast unused resources of taxation at the disposal of the Federal Government is obvious. They fairly invite to a readjustment, with an eye to relieving the people who are most pinched, and to removing every needless weight from manufactures and commerce. If we had a system under which a Finance Minister could make a scientific budget, looking widely over the sources of revenue and drawing only upon those which would yield most with least injury, while fitting taxes nicely to the demands of trade, the situation which we offer would appeal mightily to a financial genius. One like Turgot or Stein or Gladstone would jump at the chance to reform our taxation, seize our trade opportunities, and increase our general well-being, all at one stroke.

Powerful external reasons, if we are not moved by the inherent injustice of some of our tariff taxes, impel us to take their revision promptly in hand. Something has got to be done to avert a tariff-war with Germany. Secretary Root is fully alive to that danger. If our experts whom he has sent over to confer with the German authorities, report that the only way out is for us to take a hack here and there at the sacred Dingley schedules, are the stand-patters to go on saying us nay? Then there is the new Canadian tariff, now before Parliament. It is to have a "preferential" rate of duty for goods coming from Great Britain; an "intermediate" rate to be accorded to countries which, in turn, lay only moderate tariff taxes on Canadian goods; and finally the general tariff much like the existing. That there is in this a hint of retaliation against the United States is plain; but there is also a clear invitation to us to make tariff reductions of our own, and to secure the benefit of the intermediate rates in Canada. That this would mean a large increase in Canadian trade is admitted by the protectionists across the border. They are, by the way, after the fashion of their kind, disappointed that Minister Fielding did not make the general tariff higher, so that manufacturers now in this country would be compelled to locate their factories in Canada.

From the silence of the message, it would seem that President Roosevelt is blind to the tariff signs of the times. But the vigorous movement in Congress,

But the vigorous movement in Congress, LIB

within his own party, to have an extra session called in the spring for the purpose of trimming our tariff sails betimes to the winds that will soon be blowing, should open his eyes. An old free-trader himself, and a President who talked tariff-reform pretty vigorously in 1902, until he found that other issues could be worked to greater political advantage, he may yet, it is to be hoped, see how his plans for direct taxation require sweeping modification of the indirect and unjust tariff taxes, and some day send to Congress his long-suppressed tariff message.

GEOGRAPHY AND DIPLOMACY.

The British Foreign Office decided, a short time ago, to abandon geography as one of the required examination subjects for entrance into the diplomatic and foreign service. In commenting on this action, Sir Edward Grey, the Foreign Secretary, is reported to have said that, "although a knowledge of geography is no doubt very useful, it is a subject with which men of general education are generally acquainted, and which is easily acquired after entry into the service." Against this view, Sir George Goldie, President of the Royal Geographical Society, vigorously protests in a letter to the *London Times*. To show how vague the geographical ideas even of trained diplomatists may be, he narrates the following incident:

A good many years ago a territorial arrangement with France was in discussion, and I was invited to consider it. The French proposals appeared to the Foreign Office satisfactory. On examination I found that they were expressed, as might have been expected, in longitudes reckoned from the meridian of Paris, while the map with which our Foreign Office were considering the proposals was made in Germany and reckoned its longitudes from the meridian of Greenwich. The arrangement in question was never completed.

What particular motive Sir Edward Grey may have had for dispensing with more than ordinary geographical knowledge in his subordinates, aside from that of economy, is hard to tell. Possibly he may have felt that as England had appropriated about all the desirable vacant spaces of the earth, the study of geography was no longer necessary to further Imperial interests. But even from a more serious standpoint, it is quite possible to justify the attitude of the British Foreign Office, while admitting that the position taken by the president of the Royal Geographical Society has also much in its favor. In brief, statesmen will probably acknowledge the importance of expert geographical knowledge, especially in such matters as colonial policy and administration, and will always be ready to call in specialists, like Sir George Goldie, to solve their problems for them—problems which they would not dare to trust to

the trained diplomatist whose personal information, with all best intentions, cannot be more than "general."

The "general" ideas of the ordinary man concerning the earth on which he lives, outside of the stretch of country between his home and his office, are not such as to inspire confidence. The exaggerated stories of Englishmen in New York, who, in the morning, plan to run over to St. Louis for lunch, have their basis in fact. And there is an equal amount of truth in Mark Twain's story of the distinguished scientist from New Zealand who once visited Yale University. The news of his coming set that institution in a flutter. The visitor must be received and dined and talked to about his native land; but the president of Yale was not quite sure of himself on New Zealand. So he called up in succession the teachers of geography, of geology, of astronomy, of moral philosophy, of fine arts, etc., and all pleaded ignorance of everything but a rather distinct impression that New Zealand was somewhere near Australia and that there was a bridge to cross. Irresponsible individuals do not alone sin in this way. An English encyclopædia, still in course of publication, speaks of an American statesman who "was born in Rhode Island and represented that island in the United States Senate"; and Brockhaus's "Konversations-Lexikon," which is regarded as the very rock of cyclopædic truth, in its map illustrating the distribution of animal life in North America, represents alligators as gayly sporting in the Ohio in the vicinity of Louisville. Whether the illusion was due to the neighborhood of the Kentucky shore, is not certain.

To most of us, indeed, the earth is still as flat as though Columbus had never sailed from Palos, and the relations and distances it reveals are often a shock. There are the Philippines, which we persist in regarding as lying just a step or two beyond Hawaii. There is South America, which, instead of lying decently south of North America, as its name would imply, persists in sticking out absurdly eastward into the Atlantic Ocean, so that a brick hurled due south by an enraged giant at Tampa, would skim right over Panama and plump into the Pacific. There is the Panama Canal itself, with its eastern terminus lying west of its western terminus. There is Cuba, which we instinctively locate somewhere southeast out in the Atlantic, though Havana lies nine degrees west of the meridian of New York.

To base diplomatic negotiations on such general "knowledge," Sir Edward Grey would probably admit to be unsafe. The difficulty, moreover, from the point of view of international politics, is intensified by the fact that nowadays it is not actual geographical distance that counts, but time. The Suez Canal, for

the statesman, upset the geography of Africa and Asia as no seismic catastrophe could have done; and, of course, the Panama Canal will do the same. What use is there in studying geography if the nearest way to Rio Janeiro from New York is by way of London? The diplomatists, in all negotiations where geographical relations enter, as, for instance, in the disposition of boundary disputes, and the like, will have to depend on the expert. For him a sufficient working rule is that all territory producing gold, rubber, coal, or nitrates lies on *our* side of the disputed line. To determine what that line should be, one can always dig up a favorable early map or survey, or claim that the frontier runs along the crests of a mountain range instead of the actual watershed, or that it coincides with an old caravan route.

FERDINAND BRUNETIÈRE.

The unexpected death Sunday of Ferdinand Brunetière takes off the sturdiest fighter in a field regarded of serious importance in France, though little appreciated elsewhere. Literary criticism in Germany is likely to be either metaphysical or purely impressionistic; in America it is looked upon with suspicion, if not with resentment. The critic has a nasty fashion of caring more for truth than for easy enjoyment, and, like the madman who dreamt himself in the theatre, we prefer to revel in the mind's *gratissimus error*. But in France, until recently at least, literature has been considered a part of life, and the ideas of books are debated with violent enthusiasm. The old battle of the classicists and romanticists has become a part of history, and Gautier's *gilet rouge*, worn at the representation of "Hernani," is almost as famous as the red flag of the Commune.

The contest in which Brunetière played so valiant a part was only a continuation of that earlier debate. Romanticism had given birth to a numerous brood—naturalism, impressionism, and a swarm of lesser *isms*, already fading from memory. One and all, they were a rebellion against the principle of authority, which in England Pope had summed up in his oft-quoted couplet:

Learn hence for ancient rules a just esteem;
To copy Nature is to copy them;

and which Sir Joshua Reynolds had developed at length in his lectures on art. French classicism, in the mouth of Boileau, preached nature as vociferously as any modern naturalist; but it believed that the office of art was to discriminate what was good and bad in nature, and that the great masters of antiquity had once for all shown the way in this principle of selection. Hence the rules—the unities, the often-erroneous Aristotelianism, the epic law, and all the pro-

digious critical structure of Le Bossu and his British followers.

Now, naturalism simply repudiated the principle of selection, and so undermined the basis of authority. "Whatever is in nature, is good; it is the duty of the artist to imitate whatever he sees without laying upon the world any standard of moral and æsthetic values. By the inevitable law of contradiction, such a man as Zola even came to a sort of inverse selection, and gloated over all that had been æsthetically prohibited. And naturalism is only a part of the larger doctrine—if doctrine it may be called—of impressionism. Man is the measure of all things, said the sophists of old, and their representatives, the impressionists of to-day; what one man thinks and feels is as good as what any other man thinks and feels, and any thought of a man is as good as any other thought. And here, too, by the same law of contraries, impressionism has gone to the opposite pole. In place of the man whose taste has been trained to distinguish and select, such disguised impressionists as Tolstoy set up the illiterate peasant as the ultimate criterion of art, and such a writer as Andreyev professedly finds the bonds of sympathy between man and man, and the theme of art, in the cruel, bestial instincts that humanity had been supposed to eliminate.

In France, impressionism had, and has, its critical champions. Renan was the high pontiff of the school, and his dissolving influence has, until recently, been enormously powerful for evil, not only in literature, but in politics and practical affairs. Later, Jules Lemaitre and Anatole France were the accomplished leaders, and never was the revolt from authority, the sophistry of moral indifference, the refinement of universal doubt, promulgated with such suavity and distinction. Despite their principles, both were scholars of trained taste, so that their doctrine captivated the public and never shocked. Their very grace made them the more dangerous. Against them and against what they stood for, M. Brunetière waged a relentless and bitter war. Seeing the danger in rebellion, he fell, himself, into the opposite extreme, and raised authority into an idol of oppression. The office of criticism, he said, is to praise what is personally distasteful to us—a hard saying and one that explains much in his later career.

For it must be admitted that M. Brunetière, the brave fighter, was, after all, half in the wrong himself. To raise the banner of pure authority to-day is to proclaim the battle lost in advance. It is in literature as in religion: we have grown skeptical of the past. In place of the authority of written codes, we need to have pointed out and explained to us those unwritten laws which are founded in man himself, and of which

the rules of the fathers are but the imperfect formulation. Unless a teacher, whether of religion or literature, can compel us to recognize the authority of those who have found a unity of taste and morals in the higher plane of our humanity, his enemy the impressionist will bring us to discover that common ground in a lower sphere.

With all his protests, the skepticism of the hour had so far invaded M. Brunetière's mind that he was unable to perceive and trust this inner law of authority. As a consequence, he grew with age more and more dependent on the mere voice of the past. He became a professed reactionary, and a servant of the Church. In his later years he turned the *Revue des Deux Mondes*, of which he was editor, into a powerful organ in support of Rome and ecclesiasticism. Very curious in this respect was his report on the United States after his visit among us in 1897. He discovered that the providential mission and historical significance of this country had been to protect the Canadian Catholics against the oppression of British Protestantism!

As a literary critic, he had lost in grace by his reactionary step—grace, indeed, was never strong in him—and stiffened in his dialectic combativeness. It is too early to forecast positively his place in the future, but one may conjecture that, after the lapse of a little time, he will not be much read. His ideas, so far as they are valid, will gradually be taken over into the common body of criticism—his theory of the evolution of the *genres* has already attained such a position—while his lack of charm and personal magnetism will weigh down his own essays. Yet his name will be remembered and honored as of one who fought a good fight.

We cannot close without remarking on the singular propriety that brought M. Brunetière, the over-zealous apostle of authority, to end his days in the Catholic fold, and that converted Anatole France, the arch-impressionist, into an adherent of Socialism.

LITERARY ALLUSION.

Prof. William Lyon Phelps of Yale has brought up again an old complaint—that modern youth are painfully ignorant of the Bible as a piece of literature. The stories of freshmen unable to explain the simplest Biblical allusion in Teanyson or Browning, not to say Dryden and Shakspeare, are endless. The incidents are amusing or depressing, according as one takes them. But the inquiries of our professors of English might, we think, profitably be extended into other tracts of youthful literary ignorance. The Bible is only one of the masterpieces of the language with which our lusty young collegians would be found not to be on speaking

terms. Try them with an ordinary quotation or phrase from Shakspeare, and you will see on too many faces the look of dismay, combined with indignation, which all students feel entitled to exhibit when the professor asks a question to which he has not first supplied the answer. Like John Quincy Adams, they will find in Shakspeare's language "something strange," and think that his "uncommon words" sound "very affected."

In fact, the perils of literary allusion seem all the time to be thickening. We talk of the desirability of getting an occasional "literary feller" into public life, but how if we put him there and he makes speeches all adrip with literature, only to be misunderstood and misreported. An experience of this sort has more than once befallen Augustine Birrell since he became Minister for Education. As such, he has to do a good deal of speaking in the Commons and out; and, of course, being Mr. Birrell, his mouth he cannot open without there slips, if not a trope, at any rate a poetical citation or memory, or a reference to what some writer has said. Frequently, these things miss fire terribly with his audience or the reporters. Recently, for example, Minister Birrell was speaking of Chinese labor, and said that, if Goethe's word was true that this world is hell, then the British are large landed proprietors. This alone was too much for one London paper, which attributed to him the rather flat remark that the British are "large landed proprietors in South Africa." But Mr. Birrell went on to say that, granted a large ownership in a hell upon earth, it was their duty to improve their property; and he added that they must not be afraid "the characters of hell to trace." He had in mind, of course, the lines in Gray's "Bard":

Give ample room and verge enough
The characters of hell to trace.

But how does the reader suppose his allusion got into print? Why, the British public was told, in one report, that it "must not be afraid the cracks of hell to face"! The limitations of shorthand may have had something to do with this, but the limitations of literary knowledge surely much more.

This raises the question of disguised quotation, about which some people grow so hot. They insist that every allusion, every borrowed phrase, every jewel five words long with which a writer or speaker seeks to ornament his drab diction, ought to have danger-signals placed about it in the shape of " " so that the wayfaring man may not be deceived. This, of itself, we hold, is a sign of the growing unfamiliarity with English classics; cultivated people were not once so nervous lest they mistake what Milton or Shelley had said for your own pretty invention. The time has been when it was a delight to en-

counter in Scott's Journal or FitzGerald's Letters unavowed reminiscences of a Shaksperian turn or a Wordsworthian phrase. It seemed to give one a sense of moving at ease in well-bred society. But there is too much evidence that the thing has become an offence to many. Theirs is a new form of pedantry. If you chance to let run from your pen such words as the unplumbed, salt, estranging sea, these people will be down upon you at once with a charge of plagiarism. Why didn't you honestly say that you were quoting Matthew Arnold, and give the name of the poem and indicate the context? If it has got to that, we may as well confess with poor Mr. Tulliver that talking is "puzzling work."

And the unacknowledged quoter is often embarrassed as well as attacked. Witness an actual conversation which occurred not long since between an author and a lady:

She. "I have read your essay with the greatest interest. Some of your phrases have stuck in my mind, they were so felicitous."

He. "Ah, I am afraid you are flattering me. I really must doubt if you could quote one of those phrases."

She. "Oh, yes, I can! Near the beginning, you spoke of the heavy and the weary weight of all this unintelligible world. That seemed to me so true and so happily turned. You certainly have a great talent for suggestive combinations of words."

Now, what was the mortified author to do? Only one good thing in his essay and that not his, but Wordsworth's! Such experiences go to show that the writer or speaker who would be really safe should conspicuously announce the fact that he is about to quote, or to make a literary allusion. Then everybody can turn up the thing in Bartlett and feel the due learned complacency.

THE PRAISE OF DICKENS.

If it ever seemed that the popularity of Dickens was waning, certainly there is no such appearance to-day. Publishers have been vying with one another in putting out his works in attractive form, and now Messrs. Chapman & Hall have begun to issue the National Edition in forty volumes, including many pieces never before collected, and designed in every way to be final and definitive. And all the while about his work there is going up a critical chorus of praise, mingling the long growl of Swinburne's bass, the flute-like melody of Mrs. Meynell, the jumping staccato of Mr. Chesterton, with I know not how many lesser notes.

Now, whatever may be said against Mr. Chesterton's ebullition of doubtful epigrams, at least he has in his study of Dickens (recently published by Dodd, Mead & Co.) avoided the too common error of choosing the weakest side of the novels for praise. Rightly he lays stress on the superb irresponsibility of Dickens's world, and the divine folly of his characters.

And again he stresses rightly the democratic nature of his genius: "Dickens stands first as a defiant monument of what happens when a great literary genius has a literary taste akin to that of the community. . . . His power, then, lay in the fact that he expressed with an energy and brilliancy quite uncommon the things close to the common mind." I am inclined to think that in his analysis of this genuine, not condescending, democracy, Mr. Chesterton has found the real key to most that attracts and repels us in the novels; yet even here he has not quite escaped the malign influence that lies in wait for the critic of Dickens. Why must Mr. Chesterton imply on every page that great art is always, like that of Dickens, democratic? It is, on the contrary, a simple statement of fact to say that in practically all the living literature of the past the aristocratic temper has been predominant. Who, to take a single illustration, is not familiar with the outrageous contempt of the Elizabethan playwrights for the multitude whose taste they were in part compelled to conciliate? Walt Whitman knew this well enough, and divided literature into two great epochs, the aristocratic of the past, and the democratic which was to spring from his own example. Tolstoy knows it, and finds Shakspeare merely tiresome. Mr. Chesterton, with his own pungency of epithet, designates the democratic element in literature as the "pungent and popular stab," and finds that the universal test of what may be called popular, of the people, is whether it employs vigorously the extremes of the tragic and the comic. Undoubtedly in the judgments of the heart the people is right, and the maker of books severs himself from this source of power only to his own great peril. The demand for simple uncontrolled emotions, for clear moral decisions meting out happiness to the good and misery to the evil, the call for immediacy of effect and the direct use of the material of life—all this is the democratic soil from which literature must spring. Without this it lacks sap and the comfort of sweet reality. We feel the partial want of such a basis in the French classical drama, splendid as the work of that courtly age otherwise is.

Yet, there is an odd paradox connected with the emotional root of letters; while it alone gives life, it cannot keep alive. Racine has outlived and will long outlive all the merely popular dramas ever written; one can foresee the time, not far removed, when Milton will be more read than Bunyan; the enjoyment of Gray's poems already is wider and less artificial than the taste for ballads which sprang warm from the communal heart. The straightforward appeal to the passions, the pathos and humor of the moment, have a strange trick of becoming obsolete with the passing of time and the change of circumstances. The preservative of letters, what indeed makes literature, is the addition of all those qualities that, for the sake of comparison, we may call aristocratic—the note of distinction which is concerned more with form than with substance, the reflective faculty which broods over the problems of morality, the questioning spirit which curbs spontaneity, the zest of discrimination which refines broad effects to the nuance, the power of fancy which transforms the emotions into impersonal memories. In

a word, the aristocratic element denotes self-control, discipline, suppression.

Now discipline and suppression Dickens never acquired, whether in art or character. No writer of England ever underwent in his life so sharp a contrast of ignominy and celebrity, and the effect of either condition upon him is equally significant. Out of the shifting, and sometimes shifty, scenes of his youth, one experience stands forth—his apprenticeship in a blacking factory, which he was later to describe as David Copperfield's bleak slavery in the bottling establishment of Murdstone & Grinby. He learned much in those dismal days—the foul spots of London, the slime of the river, the inside of Marshalsea prison (where his father was), the pawnshops, and grimy lodging-houses; but one thing he did not learn—the chastening of spirit that suffering is supposed to bestow. He came up from that descent into ignominious drudgery in a state of exacerbation which he never outgrew. The memory of it rankled in his mind, and he never forgave his mother for her willingness to abandon him to that unrelieved misery. In his art, he would describe the spectacle of poverty with enormous gusto, but the dull, aching resignation at the core of it and its discipline he left for others to lay bare.

A few years of miscellaneous occupation followed, as schoolboy, lawyer's clerk, and reporter, and then, in 1834, at the age of twenty-two, he began to publish the "Sketches of Boz." Two years later "Pickwick" opened its career in monthly numbers, and soon raised the author to an incredible pitch of popularity. Wealth came to him almost at a bound, while he was still little more than a boy, and overweening fame as it came to no other man, even in those days of sudden celebrity. And it cannot be said that the effect upon him was wholly agreeable. Magnanimous in many ways, no doubt he always remained, and lovable to a few people, even to Carlyle, who could write of him after his death as "the good, the gentle, high-gifted, ever-friendly, noble Dickens—every inch of him an honest man"; but it is true, nevertheless, that his vanity was brought by all this egregious adulation to a state of unwholesome irritability. Applause could not reach him quickly enough and loud enough, and in the end he almost gave up authorship for the noisier excitement of public recitation. It is not only the waste of so splendid talents that we regret in this, but there is something distressful in the very thought of this great man brutalizing his face to the likeness of Bill Sikes, or mopping and mowing as Fagin, out of the mere craving for publicity.

Neither suffering nor prosperity brought him the one gift denied him at his birth, intellectual *pudor*, and the absence of that restraining faculty passed, as how could it help passing, into his work. To this cause must be partly attributed the absence in Dickens of that kind of tragedy which involves the losing contest of a strong man with destiny and his triumph through spiritual discipline. In place of tragic awe, he has rightly given us tears. I know that much of his pathos has grown stale with time, as that emotion is strangely apt to grow; yet here and there it still touches us in his stories as freshly almost as when they first came to the reader in monthly instalments; and, after

all, they are but of yesterday. Most of us may find Dora, the child-wife, anything rather than pathetic, but there are few who will withhold their tears from the death of Little Nell. Here is no conflict, no bitter and triumphant self-suppression; it is the picture of perfect meekness and gentleness fading flower-like in the breath of adversity. At his best there is a tenderness in the pathos of Dickens, a divine tenderness, I had almost said, which no other of our novelists has ever found. Who has been able to harden his heart when Copperfield, after the shame of Emily, talks with Mr. Peggotty and Ham on the seashore? And when the old man, being asked whether they will desert the stranded boat that has been their home, replies—

Every night, as reg'lar as the night comes, the candle must be stood in its old pane of glass, that if ever she should see it, it may seem to say, "Come back, my child, come back!" If ever there's a knock, Ham (partic'ler a soft knock), arter dark, at your aunt's door, doesn't you go nigh it. Let it be her—not you—that sees my fallen child!

And again there is the same touch of human delicacy when, in the presence of David, the broken girl, discovered at last, sinks in her uncle's arms: "He gazed for a few seconds in the face; then stooped to kiss it—oh, how tenderly!—and drew a handkerchief before it." The beauty of the gesture is all the finer because it follows the coarsely conceived and coarsely written interview with the impossible Rosa Dartle.

But if his pathos too often failed from some fault of taste, his humor was incessant and sure. I do not mean the mere ludicrousness of situation—the amiable Mr. Pickwick caught at eavesdropping, or the dashing Mr. Winkle on horseback, although there is abundance of this, too, in Dickens that has not grown stale—but the deeper and more thoroughly English humor of character. He is a humorist in the manner of Ben Jonson and Smollett and Sterne and a long line of others—the greatest of them, it may be, and, alas that it should be so, the last; for with his followers, of whom Gissing is a type, a new spirit of sympathy enters, hostile to the old spontaneous joy. It was not for nothing that his favorite reading as a child and as a man was the great novel writers of the eighteenth century. From their hands he received the art which his genius was to develop in a hundred ways. Humors, as Walpole observed, are native to England, being the product of a government which allows the individual to develop without restraint. Quite as often, I should say, they are in reality the escape in one direction of faculties otherwise pent up and oppressed—the exaggeration of some whim or eccentricity until the whole demeanor of a man is dominated by it. Their very essence, at least as they come to us in art, is the pride of irrepressible life.

And in one particular, in what may be called the humor of trade, Dickens is supreme. Others have seen the fruitfulness of this theme. Indeed, as Hazlitt observes, "the chief charm of reading the old novels is from the picture they give of the egotism of the characters, the importance of each individual to himself, and his fancied superiority over every one else. We like, for instance, the pedantry of Parson Adams, who thought a schoolmaster the greatest

character in the world, and that he was the greatest schoolmaster in it." Or, if we come to Dickens's own day, there is such a pedantic humorist as the Gypsy, who communicated to Borrow the secrets of rat-catching, and "spoke in the most enthusiastic manner of his trade, saying that it was the best trade in the world and most diverting, and that it was likely to last for ever." These characters are common enough everywhere, but in Dickens they flourish with extraordinary exuberance. Who can name them all?—from old Jack Bamber, the lawyer's clerk in the "Pickwick Papers," with his doddering delight in the mouldering chambers and sordid tragedies of the Inns, to Durdles, the stone-cutter in "Edwin Drood," with his grotesque complacency "down in the crypt among the earthy damps there, and the dead breath of the old 'uns"—who can count them? What horror or pain or dull subjection can diminish their infinite zest in living? It has always seemed to me that Jasper's complaints in "Edwin Drood" about the cramped monotony of his existence and the need of subduing himself to his vocation were a species of treachery to the genius of his creator, a sign that the author's peculiar power was passing away, or, at least, suffering a change.

And this special quality of humor, shown by a man's exultation in his trade, leads to a trait of Dickens which might easily be overlooked. Commonly—always, I think, when most characteristic—he describes his people from the outside and not from within. Let us not be deceived by that "pungent and popular stab"; these emotions that touch us so quickly are not what the characters themselves would feel, but what Dickens, the great egotistic dramatic observer, felt while looking out upon them. This pathos is not the actual grief of one bewildered and crushed by circumstances; it is the yearning for tears, the γόου ἕμερος of the strong, impregnable heart. Do you suppose that Smike ever knew in his own breast the luxury of sorrow he gave to his creator and still gives to the reader? His misery, I fear, was of a dumber, grimmer sort.

And so with those characters that merge into the pedantry of humor, to repeat Hazlitt's happy phrase. It is the democracy of Dickens that called them into birth, no doubt, but something else entered into their composition in the end—the great joy of creation which made it impossible for the author to abide within their vexed circle. Possibly old Weller got such hilarious delight out of the misdoings of his wife and Stiggins as his words import, but what of a thousand weaker souls who hug their troubles and their evil? There is the ragged stoker in "The Old Curiosity Shop," who drags a romantic comfort from his sympathy with the cinders and the roaring furnace that have been his whole existence. There is "No. 20," who became so injured to the Fleet that within its walls was freedom and all without was prison. And there is the sublime Quilp, almost the highest stroke of the master. He is brother to all the spooks and goblins of the credulous past, a pure creature of fairyland. His trade is malice, and the sheer exhilaration of evil never received a more perfect expression. Wickedness in him, losing its sullen despair, is turned to amusing mischief. I cannot be persuaded that Mrs.

Quilp really suffered on that memorable occasion when she sat up all night, while her crooked lord smoked and imbibed grog; the pleasure of watching his leering eyes must have counteracted all sense of fatigue. In fact, we are told that she loved him to the end. It was unpardonable in Dickens to bring him to that fear and death in the slime of the river. Here he was misled by that other democratic instinct which demands the punishment of the malefactor, and if Dickens in creating Quilp had at all entered into the reality of evil, this tragic climax would have been appropriate. But Quilp, the gay magician of malice, who breathed fire and whose drink was boiling rum—to think of him perishing in the cold element of water! A mere novice could have contrived his taking off better. But it was notoriously the way of Dickens to bring his people to an impossible conclusion. Quilp he could drown, while of Micawber he made a dignified magistrate and of Traddles a prosperous lawyer.

So it is that the emotions in Dickens's work are quick to life, whereas, the people are external to us, if not unreal; to make the inevitable comparison, we seem to have known Dickens's characters, we have lived Thackeray's. And this, no doubt, accounts for the surprising diversity of judgments you may read in his admirers. Take the three critical studies that lie before me at the present moment—by Prof. A. W. Ward, Mr. Chesterton, and Gissing—and you will find them in a state of most bewildering disagreement. To Mr. Chesterton the epitaph of Sapsea on his wife is a bit of "beatific buffoonery," the true essential Dickens, whereas Gissing will none of it, and thinks it transcends the limits of art. Gissing can put no faith in Mr. Peggotty, whereas Professor Ward finds this whole episode of Emily and her uncle the most perfect part of the book. Only he would exclude Rosa Dartle, who, nevertheless, is to Mr. Chesterton one of Dickens's "real characters." Gissing rejoices to see Pecksniff in the end "felled to the ground," whereas Mr. Chesterton deems the penalty one of the peculiar blemishes in Dickens's dénouements. And so on through the list. Most astonishing of all, both Gissing and Professor Ward find special beauty in that story of David and his child-wife, Dora, which to most readers, certainly, is an utterly tiresome piece of mawkishness.

Now there has been no such divergence of opinion among the admirers of Thackeray or Scott or any other of the great novelists. And the reason for it in the case of Dickens is plainly this, that his characters are so constructed that they will not bear analysis. Probably most people would join in calling Sam Weller the finest conception in Dickens, as his humor is the least subject to the disillusion of repetition. And yet, can any one really believe, if to his peril he stops to reflect, that such a union of innocence and worldly knowledge ever existed in a single breast? These conflicting judgments mean simply that the critical faculty has been at its dissolving work, not steadily, but at intervals, destroying the illusion where it touched and leaving other parts untroubled. For there is a right and a wrong way to read, or at least to enjoy, Dickens, as I have in my own experience, if I may be allowed the egotism, emphatically

discovered. A number of years ago I was living in remote seclusion, where about the only novels at my command were a complete set of Dickens in the village library—if library it could be called. One day, being hungry for emotion, I started on these volumes, and read them through—read as only a starved man can read, without pause and without reflection, with the smallest intermissions for sleep. It was an orgy of tears and laughter, almost immoral in its excess, a joy never to be forgotten. Well, I have been reading the novels again, slowly now, and weighing their effect—and in comparison how meagre my pleasure is!

But the old way was the right way, I think, and he who opens his Dickens must be ready to surrender himself unreservedly to the magician's spell. And then, what a place is this into which he is carried! Who for any realism of art would exchange the divine impertinence of a world inhabited by Mrs. Gamp, and Richard Swiveller, and the Marchioness, and Mark Tapley, and Major Bagstock, and Mantalini, and Mrs. Nickleby, and the fat boy—but the list is as endless as the master's hand was indefatigable. If one were asked to sum up in a single phrase the effect of all this mad variety of humors, one might call it the actual visualization and evocation into life of that doctrine of Folly which Erasmus preached in his "Stultitiæ Laus," some four centuries ago. And this should be the motto for all the *Mystæ* who have been sealed into the fellowship of this secret knowledge: "Quod si mortales prorsus ab omni sapientiæ commercio temperant, ac perpetuo mecum ætatem agerent, ne esset quidem ullum senium, verum perpetuâ iuventâ fruerentur felices"; and again, "ut nihil est stultius præposterâ sapientiâ, ita perversâ prudentiâ nihil imprudentius." Nothing, indeed, is more foolish than the preposterous wisdom, nothing more imprudent than the perverse prudence, which would withdraw a man from the untroubled fruition of all that Dickens has so bountifully provided. P. E. M.

THE HISTORICAL CONGRESS AT MILAN.

FLORENCE, November 12.

The First Historical Congress of the Risorgimento, which met last week at Milan, excited an unexpected interest in Italy, and served as a forum for discussions which may find an application at home. The Risorgimento, which has come to be accepted as the specific name for the movement by which Italy became free, independent, and united, is now recognized as a closed period, which lends itself with peculiar fitness to historical study. For Italians, it is the period of national birth, of the flowering of patriotism, of ideals and sacrifices and heroisms, and of the redemption of their race from political servitude and from moral and intellectual abasement. For strangers, the Risorgimento offers the most remarkable modern example of racial regeneration—a story beyond all others rich in romance and in dramatic contrasts, a stage on which many personages of striking features played their various parts and brought to a solution problems which had long tormented Europe. It has the three elements—characters, incidents, significance—which

make human history more important than the record of quadrupeds.

The Risorgimento closed in 1870 with the fall of the temporal power, and the creation of Rome as the national capital. Its beginning dates from the French Revolution, which broke up the old conditions, although Carducci would go back to 1749, the year when the Peace of Aix-la-Chapelle took effect. The new generation which has grown up since 1870 has devoted itself with exuberant zeal to the collection of memorials of the Risorgimento—partly from natural veneration and wholesome hero-worship, partly as a relief from the unheroic politics of recent decades. The great actors in the drama have passed away, so their lives are being studied, their letters edited, their biographies written. The public archives have been put in order, and are now, with many important exceptions, accessible. The old men who survive to bear witness to the glorious image of 1848, or to the realized day-dream of 1860, publish their recollections as copiously as our own veterans of the Civil War. Antiquaries and specialists hunt down every relic, every scrap of paper. In the chief cities museums have been opened, into which material of all kinds has poured; and various journals, generally local, have been established for the publication of noteworthy articles and of sources. It was time that the workers in this field should get together and confer on the best methods of arrangement or lay down some uniform rules, if, indeed, uniformity be desirable.

Some of the most fruitful work of the congress concerned these matters. The discussion of the museums at once brought out two antagonistic points of view. On one side were the advocates of the museum as a sort of patriotic storage battery. They held that its first object should be to display memorabilia of all kinds that may awaken in the visitor veneration for the great man or the great event, and so kindle his patriotic sentiment. In one visitor this sentiment may be stirred by the sight of Garibaldi's scarlet kerchief, in another by Mazzini's penholder, in a third by one of Cavour's letters, in a fourth by the gauntlet Victor Emmanuel wore at San Martino. As there is no means by which you can divine what particular thing will be the effective stimulus in any given case, you must make your museum as hospitable and as miscellaneous as possible. "A poor widow, whose husband, a common soldier, was killed at Solferino, keeps his blood-stained coat as a holy relic for forty years, and bequeathes it to our collection. Am I to reject it?" asked Professor Corio, the able director of the Milan Museum of the Risorgimento. "Are we to display the memorials of great personages only? Shall not the patriotism of the private, who gave his life on the battlefield, have its recognition? There are no degrees of more or less in supreme sacrifice. That coat may mean nothing to the student of history by documents; but it may mean a great deal to the public school pupils, the peasants, the common soldiers, who visit the museum in great numbers."

This position was traversed by the professional investigators and writers who insisted that the collections ought to be arranged scientifically, like those of natural history or archæology, for the benefit of

scholars. The stimulation of patriotic emotion was all very well, they admitted, but it would be fleeting and ineffectual unless it were based on a rational understanding, and this could be reached only through a scientific treatment of the material. A museum should be more than an old curiosity shop or a precinct for the exhibition of patriotic fetiches.

To this Professor Corio replied with much vigor, and he took the discussion out of the region of theory by stating that last year 106,000 persons visited the Milan museum. "How many of these were professional students of history? Very few. Our duty is to serve the interests of the hundred thousand and not of the few scores or hundreds. And, after all, the archives, with their scientific methods, are the proper working-place for the latter." The divergence of opinions being too great for either side to give way, a resolution was passed expressing the hope of the congress that the Risorgimento museums might continue to be centres of patriotic education and stimulus and at the same time serve the purpose of serious historical students.

In the United States we have no such collections, either in scope or detail, as those which have been established at Turin, Milan, Venice, Palermo, and other Italian cities; but the questions, what to accept, and how to arrange, must already have come up in many of our historical societies. As an illustration of the thoroughness with which the Italians are working, let me cite the Milan Museum, which has three or four rooms devoted to Garibaldi and his men. Here are photographs of him by the score; views of his battlefields, autograph letters, his uniform, his weapons, his books, the portraits of a large number of his Thousand, with special relics of many of them, saddles, swords, camp materials, letters, and additional memorabilia of his famous volunteers and captains, Manara, Mameli, Bixio, Mario, and the rest. A study of this material would enable the historian to visualize the Garibaldian legend as he could do in no other way. Would it not be well to make a similar collection of Lincoln memorabilia before they have all fallen into the hands of dealers and private collectors? From now on the camera and the phonograph may be expected to play a large part in recording the deeds and words that go to make up history, and it is more than probable that the history professor of the future will illustrate his lectures by the cinematograph; but even these devices can never take the place of the actual dress or document or weapon of historic personages.

The congress discussed further the best way to encourage the study of the Risorgimento in the public schools; to promote the preservation of material in provincial centres; to persuade the Government to permit free access to the archives; and to urge the addition of special courses on contemporary Italian history to the university curriculum. Several of the professors present agreed as to the ignorance of the young generation. The importance of medals and coins as a subsidiary source of history was brought out by Prof. S. Ricci, an expert medallist, who has published a valuable work on Risorgimento numismatics. The collective work of the congress was concluded by the formation of a National So-

ciety for the History of the Risorgimento, one of whose functions will be the publication of a review similar to that which Professor Manzone founded ten years ago, but had to abandon from lack of support.

Besides these general discussions, the congress listened to some dozen memoirs, several of which examined minutely a special event, while others sought to establish general conclusions. To the former belonged Signor E. Ghisi's paper on the tricolor flag in Italy from 1796 to 1814, Prof. A. Micheli's paper on Tito Speri, and Prof. G. Riva's account of Garibaldi's retreat on Monza in 1848. To the latter belonged memoirs by the two American delegates—on the relations between Italy and the United States from 1837 to 1870, by H. Nelson Gay of Rome, and a parallel between Cavour and Bismarck, by your correspondent. Mr. Gay's monograph, enriched by citations from the archives of the American embassy, and from the inedited papers of the late George P. Marsh, was received with much favor, and many references were made to his magnificent collection, which now numbers some 30,000 titles, of works on the Risorgimento. A special exhibit of Risorgimento relics was opened. There was a farewell banquet, pleasantly informal, at which Dr. L. Pastro, the last survivor of the Belfiore victims of 1853, was the hero—a living historical document. It would hardly have been more surprising to have had Silvio Pellico or Confalonieri there, so remote do the Mazzinian conspiracies seem from present conditions. After all, it is not by lapse of years but by qualitative changes that the historian measures time.

WILLIAM ROSCOE THAYER.

Correspondence.

THE HONESTY OF BROAD CHURCHMEN.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 29, in speaking of Dr. Crapsey's enforced retirement from the Episcopal Church, and of his advice to others holding views similar to his not to withdraw, but to remain in the Church, you say,

This seems to us to be in the interest neither of ecclesiastical order nor of sound morals. . . . The idea that the progress of truth or the reform of a creed can best be effected by remaining in a morally ambiguous position, is one to which we find it difficult to subscribe.

Other statements of yours also in recent issues have seemed to give it as the opinion of the man in the street, and to endorse that opinion, that Broad Churchmen are dishonest, as holding views which are not those of the Church to which they belong and yet retaining their positions in the Church for the sake—as it has been expressed—of "eating her bread." This is a charge so serious that, if it is well-founded, it would require, as the High Churchmen are asserting, the expulsion of all Broad Churchmen and their moral condemnation. None would demand this more insistently than the Broad Churchmen themselves.

But to many this seems too easy an analysis of the situation. For, in the first place, the recent decision of the ecclesiastical court of Western New York by which Dr. Crapsey was condemned has not in any

way affected the legal position of Broad Churchmen, at least of those outside that diocese. For the decisions of a diocesan court have only diocesan validity. To maintain that they constitute law for the whole Church is like asserting that if California excludes the Japanese from her schools, they must therefore be excluded from all schools throughout the United States. Nor does this diocesan decision have general validity given it through its recent affirmation by the Court of Review. For that court is expressly prohibited by its constitution from pronouncing upon matters of doctrine or upon the substance of cases brought before it, but must confine its consideration wholly to the legality of the lower court's procedure. From a legal point of view, then, the recent decisions have not affected the position in the Church of any persons excepting Dr. Crapsey and possibly some in the Diocese of Western New York.

But it would be abhorrent to any Christian minister to be even suspected of the methods of sharp and shady business—of taking advantage of a legal technicality to commit a grave moral wrong. Honesty is just as essential in the ecclesiastical world as in the business world; and to decide in a given case what honesty demands is often as complex a problem. The Broad Churchman maintains that he has a right in the Church morally and historically, that the position he holds is essential to the Church's existence, and that its abandonment, if thorough, would result in her decay and death. For there have always been in the Christian Church since the days of St. James and St. Paul two differing types of mind—the one laying stress on institutionalism, on obedience to authority, and caring little to investigate the grounds of its belief; and the other emphasizing the individual element, the importance of thinking, and the conviction that honest and clear thought is not subversive of but essential in historic Christianity. Students of Church history do not need to be pointed to Clement of Alexandria and Athanasius, to Abelard and St. Francis and Wycliffe for instances of the latter type before the Reformation, while after the Reformation the tone of the Church in England was almost wholly of this type for nearly a century. For it was not until the beginning of the seventeenth century that the party represented by Bancroft and Laud gained a sufficient footing to be recognized and opposed.

It is the contention, then, of the Broad Churchman that he is conforming to the standards of his Church quite as truly as the High Churchman. For the most pertinent standard is that which is contained in the promise the priest makes at his ordination—that he will "minister the doctrine and sacraments and the discipline of Christ, as the Lord hath commanded, and as this Church hath received the same." And when he asks where the official statement is, as to how the doctrine and sacraments are received by the Church, he is pointed not to constitution or canon or legal decision, for there are none containing the final utterance. But he is referred to the Prayer Book and to its services. What he seeks is to be found in these embedded. An official standard of interpretation of doctrine the Church has never established. In order to ascertain how the Church "hath received

the same," it would be manifestly incompetent to turn and ask the man in the street; for that which seems to him the "plain" or the "common-sense" or the "only" meaning of a theologic statement, is not unlikely to be wholly modern or local, or even individual. It is the consensus of opinion of the Church at large which must be taken as the ultimate standard.

This may seem too vague to be of value. It furnishes, it is true, no rule of thumb for the ready settlement of disputes, and none such is possible. And here is a main ground of difference with the legalist. For he is inclined to assert, "There must be such a rule, and the thumb must be mine." But, instead of being so vague as to be unpractical, it is, on the other hand, the only practicable standard, for it consists not in rules, but in principles. It is the same as the standard of the law of the land. For this resides only secondarily in the ordinances of Legislatures and the decisions of courts. Primarily, it is in the justice, the intelligence, the moral sense of the people; and this slowly but surely shapes legal precedents and police regulations. For certain practical emergencies the Church has established canons. She has also set forth creeds. But she has never attempted in this country to nail a given meaning to an article of belief, but has maintained that comprehensiveness in its interpretation, within the reasonable limits recognized by her whole history, is as important as exactness.

Such comprehensiveness has long existed in case of every article of the Apostles' Creed, for example, except two. No one would think of asserting that "I believe in God" or "in the resurrection of the body" has or must have the same shade of meaning to every one who uses the Creed. But the thought of the Church has been only recently awakened to the application of this principle to the two articles concerning the Virgin birth and the resurrection of Jesus. There are unquestionably in the New Testament two different traditions in regard to the manner of Jesus's birth, and two different modes of viewing his resurrection. The Broad Churchman who is a priest promised at the ordination to instruct his people out of the Scriptures, and to "teach nothing as necessary to eternal salvation but that which you shall be persuaded may be concluded and proved by Scripture." He has surely, therefore, strong ground in maintaining that views which are in the Scriptures are at least permissible in the Church. He also maintains that whichever of the views above mentioned is held, belief in the divinity of Christ and in his resurrection is in no way diminished thereby. It is for this reason that he repudiates the charge of dishonesty when he repeats the Creed, with its articles of the Virgin birth and the resurrection of the body, since he holds the identical truth these were designed to express. The language in which it was expressed was doubtless sufficient for its time, but to-day it needs sifting to reveal its message, just as hell-fire needs sifting in order to reveal beneath it the solid fact of eternal loss. The High Churchman declares, "One only of these views of the Creed is consistent with belief in the divinity of Christ, and legal in the Church." The Broad Churchman replies,

"Both are so consistent, and both are legal." The attempt to narrow the terms of subscription to one rigidly defined type is a late development in the history of doctrine, and one which has in every case been soon abandoned. This is made evident in Prof. A. V. G. Allen's forthcoming book on the subject. The attempt, however, is the result of an advance in thinking by no means to be regretted. As the spirit of scientific thought increases, many fields are brought within its range which previously had been left quiet in vague indeterminateness. But it is pseudo-scientific to insist on defining what cannot be defined, and on interpreting poetry or theology in terms of legal contract.

Whether the position of the Broad Churchman is legal in the Episcopal Church is a matter now in some quarters under discussion. The Crapsey case has given weight to the opinion that it is not. It has established no decision making it illegal. It was in view of this, I take it, as well as through his unshaken loyalty to the Church he has loved and served so nobly, that Dr. Crapsey expressed the hope that Broad Churchmen would not withdraw. Whether their views are approved or disapproved, such persons may not, I submit, be justly accused of dishonesty for holding a position which in the main has always been held in the Church, and of which even the details have not been condemned by the Church to-day.

FREDERIC PALMER.

Andover, Mass., December 8.

A QUESTION OF METRICS.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly make clear one or two points in the comment on Professor Lewis's book, "The Principles of English Verse," in your issue of November 15. Two quotations are given, the first from Milton, and the second from Tennyson. Will you tell me why the first, "The world was all before them," should be scanned $\cup | \cup \cup | \cup \cup | \cup \cup |$ as trochaic, when it occurs in a blank-verse poem, the normal line of which would be iambic pentameter? Moreover, this line completed with the additional words "where to choose" is a normal iambic pentameter line. Is it also a fair test of rhythm to give only a part of a line when the rhythmical character of a line is actually dependent to some extent upon the length of the line, as the reading of four and five stressed verse would prove?

The second example, "To bicker down a valley," is taken from a poem also pre-eminently iambic in character. It would naturally be scanned, $\cup \cup | \cup \cup | \cup \cup | \cup \cup |$. It might also be scanned, $\cup | \cup \cup | \cup \cup | \cup \cup |$, but since the whole is iambic and not trochaic, the first is the correct form. How could it possibly be scanned $\cup | \cup \cup | \cup \cup | \cup \cup |$? Both quotations seem clearly to fall into the form objected to, that is, $\cup \cup \cup \cup$ —; and there is no rhythmical difference due to any difference in the recurrence of stressed and unstressed syllables. The real difference in the rhythmical character of the two is assignable to tone and quantity.

Moreover, the main objection to Professor Lewis's book, that he does not grant the organic value of the foot, is not clear. Is not the character of a line of verse fully

described when written $\cup \cup \cup \cup \cup \cup$? What in addition is gained by $\cup \cup | \cup \cup | \cup \cup | \cup \cup |$ except convenience in referring to some definite foot? And the use of the foot for convenience, Professor Lewis not only grants, but adopts. If one throws away entirely the idea of the foot, there is still a "recurrence of similar phenomena at regular intervals of time," or if preferred, "a regular arrangement of time-intervals." The foot is merely a mechanical device to indicate the division between time-intervals.

ADA L. SNELL.

Mount Holyoke College, South Hadley, Mass., November 20.

[The difficulty is that three things have been overlooked. First, the bar, as it is used in the review, like the bar in music, makes no break in the sound; it merely indicates to the eye, on paper, that the recurring group of similar phenomena, by which the longer series is measured, is for convenience assumed to begin with the ictus or down-beat. In music, in ancient lyric, and in English verse that method of division best avoids confusion. The legal day begins at midnight, the astronomical day begins at noon; does the method adopted affect in any way the phenomena themselves? Of course, both lines are "iambic," in the sense that each begins with the arsis. In the Miltonic phrase the syllabic relations are in no way changed by omitting the rest of the line. Second, the reader was expressly warned that the macron and breve were used by the reviewer to denote time-relations, not accents. Third, accented is not the same as long, unaccented is not the same as short. Tennyson used to complain that people confused accent and quantity. "They said the first syllable of 'sunny' was long, whereas it evidently is short." (Memoir by his son, vol. ii., pp. 12 and 400.) So in "bicker" and "valley," the first syllable evidently is short. Nobody reads "To bicker down a valley" otherwise than as $\cup | \cup \cup | \cup \cup | \cup \cup |$. These differences in quantity, *i. e.*, in time-intervals, are of the very essence of rhythm. The rhythmic character of a line is clearly not fully described by marking the accents only. Mr. Lewis's defect is that he takes too little account of the arrangement of time-intervals between the beats—does not adequately analyze those groups of similar phenomena, the feet, whose regular recurrence makes rhythm. It is as if a musician should teach that bars are equal, but should ignore the differences between notes within the bar, merely saying vaguely that these notes differ variously, and sometimes even one note fills the whole bar, but you needn't bother to consider such trifles too curiously.—THE REVIEWER.]

THE CASE OF THE TWENTY-FIFTH INFANTRY.

TO THE EDITOR OF THE NATION:

SIR: I have followed with interest the controversy over the case of the Twenty-fifth Infantry. I have lived for many years in the neighborhood of various frontier posts, and can say, with authority, that the conduct of the colored troops compares very favorably with that of the white troops.

The Third Battalion of the Twenty-fifth

Infantry has been punished for not delivering up to justice a guilty comrade; but do all of your Eastern readers realize what justice to a negro means in Texas? I am personally of the opinion that the entire Twenty-fifth Infantry would prefer "discharge without honor" to surrendering a comrade to a Texas lynching bee. It has required no little moral courage for the men of the Twenty-fifth Infantry to stand by their comrade, or comrades. Our President has himself the courage—and in his position it requires considerable courage—to stand by his friends. It is to be regretted that he cannot see the affairs of the Twenty-fifth Infantry in this light.

A. MORGAN.

Valentine, Neb., December 6.

Notes.

The diary of Hans Christian Andersen, during the years 1868-75, is to be published in Copenhagen, as the third and last volume of his "Story of My Life."

Anthologies are always numerous, but this year they fall thicker than usual. Largest of all in size is a volume called "Whisperings from the Great," being nothing more than the customary birthday album, compiled by Constance A. Meredyth and published by Henry Frowde. The selection is catholic, and includes French as well as English authors. Two other books are arranged for the calendar; one, "The Friendly Year" (Scribners), with selections mainly in prose, and of a religious or ethical character, by Henry van Dyke, the other, "All the Year in the Garden" (Crowell), by Esther Matson, containing a daily bit of nature verse. Other anthologies are made on a special theme. Thus, we have "A Sailor's Garland" (Macmillan), by John Masefield, containing a surprising amount of good sea-verse. One may here observe the change in tone from the older terror of the ocean to the more friendly feeling of the nineteenth century. "Days and Deeds" (Baker & Taylor), compiled by Burton E. and Elizabeth B. Stevenson, is an attempt to gather together the really significant poetry relating to American holidays, and to great Americans. A little book of "poems divine and moral," collected by FitzRoy Carrington, is published by Duffield & Co., as "The Pilgrim's Staff" in form and type to match old colonial work. Most attractive in appearance and substance are three small volumes that show much the same principle of selection. E. V. Lucas's "Friendly Town" (Holt) has as subtitle "A Little Book for the Urbane," which serves to characterize it fairly well. It is in prose and verse, such a collection of friendly pieces as would have delighted Charles Lamb, whose editor Mr. Lucas has been. It is odd that Lionel Johnson's stanzas on "Saint Charles" are not included. "Traveller's Joy," by W. G. Waters, and "The Pilgrim's Way," by A. T. Quiller-Couch, are both published by E. P. Dutton & Co., and are somewhat alike in contents, both including prose and verse, and both prepared for no less a journey than that of life itself. Mr. Quiller-Couch's book is more reflective in tone.

and mates in this respect with Mr. Lucas's.

Shaksperc's dramas and poems is the latest addition to the single-volume editions of the poets in the Cambridge series (Houghton, Mifflin & Co.). The editor, Prof. W. A. Neilson of Harvard, has given us in this volume a text based on an independent examination of the early Quartos and First Folio. He has included also a biographical sketch and glossary and summaries, prefixed to each play, giving all necessary information concerning sources, authenticity, etc. The work leaves nothing to be desired in point of scholarship, and could, indeed, be recommended without reservation but for the small type which in consecutive reading puts all eyes but the strongest to a pretty severe test.

Eight years ago G. W. E. Russell, the veteran journalist and politician, and editor of Matthew Arnold's "Letters," published his "Collections and Recollections," an amusing volume of gossip in which may be found most of the best and hoariest anecdotes of political, literary, and social English life in the nineteenth century, with a running commentary of reminiscences. His new volume, "Social Silhouettes" (E. P. Dutton & Co.), is more ambitious, because in it Mr. Russell passes from the particular to the general, and sets out to register certain English types, the soldier, the country parson, the author, and the rest; to do in fact for London what Theophrastus did for Athens in his "Characters." Since praise inevitably sounds flat in sketches of character, Theophrastus admitted into his immortal gallery none but the stupid or vicious. Mr. Russell, too, does not keep the tone of mild satire out of his kindest portraits, the Doctor, for instance, or the Schoolmaster, or the Curate, but most of these characters are an improvement on their literary forerunners. The Curate, especially, who has had to face his caricature in every English novel and play, will find himself recognized in this clever portrait for what he has become—the most strenuous and not the least athletic of English professional men. But Mr. Russell wrote with greater gusto such sketches as the Faddist, for whose sake Theophrastus might regret having been born too soon; the Plutocrat; the Authoress, whom Mr. Russell envisages as combining the characteristics of Sarah Grand and Marie Corelli; the Buck, who is none other than the Exquisite of Theophrastus; the Quidnunc, who is Theophrastus's Newsmonger, a figure more familiar in Athens than in London. The political portraits are drawn with a peculiarly expert hand. The Election Agent, the Candidate, and the Party-Hack, are figures that one has met in all the political memoirs and in Trollope's novels. What Mr. Russell does for them is to point to the changes in their features in the last forty years, the completeness of their adaptation to changed times.

"New England Town Law," by James S. Garland (The Boston Book Co.), is primarily intended to serve the most practical purposes, for it professes to be simply a digest of statutes and decisions concerning towns and town officers. Yet the introduction, eighty-three pages in length, is of interest to many persons other than the officers and lawyers who will use the body

of the work; for the introduction gives an account of the history, functions, and present condition of the New England town as a political, religious, and social institution. The author is obviously an enthusiast; and consequently he is easily forgiven for imagining that the townships found in so many States outside New England, although lacking town meetings, moderators, and selectmen, present the essential features of the New England town.

"Highways and Byways of the Mississippi Valley," written and illustrated by Clifton Johnson (Macmillan Co.), is a book to which one will turn in vain for the striking and unusual; but the author has uncommonly keen eyes for picking out what is worth while in the every-day life of the masses. The present volume traces the Mississippi from New Orleans to the wilder region of its head waters, and but few phases of its life to elude the author's notice. Especially valuable is his knack for penetrating without offence into the more intimate life of the farmers, lumbermen, and villagers, so that we get much that is practically first-hand material for the study of the average social life of the great valley. Whether, however, he gained a fair knowledge of the seamier side of the "shanty-boat" life to which he allots one chapter, we are inclined to doubt. He has at least given no hint of the enormous amount of theft, prostitution, and illegal liquor dealing which these little house-boats shelter, the owners finding it easy to elude the law by stealthy and frequent changes of location. There are regions where it is difficult for respectable people to indulge in house-boating as a pastime, because of the presumption of wrong intent thus thrown upon any boat of the kind, whose occupants are not already favorably known. The chapter on Mark Twain's country is amusing in its revelation of the serious point of view from which many of the more unsophisticated natives judge his humor, and their consequent inability to consider his writings as thoroughly trustworthy. The illustrations are full-page insets, well chosen and effectively reproduced.

We remember, in the early eighties, assisting at an interview between an inebriated "cow-puncher" and an English "tenderfoot" who was waiting for the northern stage in a saloon at Rock Creek. The former was explaining to the latter the "institutions" of the United States, and his last, merely verbal, elucidation of his thesis consisted in the statement: "This is a free country. I'm going to kick your dog." The formula may have been a new one, but the essential idea is at least as old as the thirteenth century, when, the rise of the Italian Republics having concentrated all legal authority in the hands of the citizens, and often enough in the hands of a mere fraction of the citizens, the *Popolo* began to show itself as arrogant and illiberal as ever the feudal aristocracy had been. Nor is there any phase of communal life in which the then prevalent conception of liberty as the exclusive prerogative, nay, almost the personal attribute, of the dominant class, is more clearly manifested than in the relations between the communes and their *contadi*. The matter is one to which we have already alluded in our notice of

Signor F. Briganti's "Città Dominanti o Comuni Minori nel Medio Evo," but we are now able to announce the appearance of an even more valuable contribution to the subject in Prof. R. Caggese's "La Repubblica di Siena e il suo contado nel Secolo xiii." (Siena: Tip. Lazzeri). The picture which this book affords us of the ruthless exploitation of the country districts for the benefit of the cities is truly appalling. Indeed, it would seem that the few and precarious rights which were enjoyed by the peasantry were granted them only for the benefit of their masters—just as the owner of a horse might feed him with oats so as to get more work out of him. We have already urged upon our readers the importance of this hitherto little explored branch of the history of mediæval Italy, and it is therefore enough to refer them to Professor Caggese's scholarly work.

The verses of the late Alfred Garneau, translator to the Canadian Senate, have been gathered for posthumous publication by his son (Montreal: Librairie Beauchemin) with perhaps a keener sense of filial devotion than of literary discrimination. Several of these *bluettes* are in the form of innocuous album or occasional verse with enough gentle sentiment to embalm them in the memory of private friends; yet they want specific quality, and seem to have been written under the spell, not of reserve, but of constraint, as from a strictly cloistered intellectual seclusion. This leads to such belated trifling as:

L'aurore
Colore
D'un fin
Carmin, etc.

reminding one of Jérôme Paturot's hirsute poet with his "Qui! Toi, Belle, Telle," etc. The verses entitled "À Ma Sœur," with their simple purity, redeem much. In the last poem, "France," which suggests, though it does not express, a French-Canadian's feeling toward original *patrie* and speech, occurs the singular line:

A Polivier plus blond encore.

"Faint-gray," Browning says.

In the "Bibliographie Géographique" for 1905, the fifteenth of the series published by the *Annales de Géographie*, nearly twenty-five hundred works, Government reports and articles in scientific journals, are catalogued and analyzed by the editor, Louis Raveneau, and fifty-one other writers of different nationalities. These analyses are not mere dry schedules of contents, but are often lively descriptions of works from the critic's point of view. Paul Girardin, for instance, begins his characterization of Capt. Mahan's "Le salut de la race blanche et l'Empire des Mers" with the remark that "one will find in this book some of the cherished ideas [*idées chères*] of President Roosevelt." As in previous years, more space is given to our Government reports than to those of any other nation. The full index and the numerous cross references under its seventy-one divisions make it an invaluable work of its kind.

A noteworthy evidence that the scientific spirit overleaps national boundaries is the publication of the literary remains of Hegel, which the Société des amis de l'Université de Paris has undertaken, on the basis of manuscripts found in the University Library of Berlin. The first volume, contain-

ing "The Life of Jesus," edited by Dr. Paul Roques, professor of German in Chartres, has just been issued by the house of Diederichs, in Jena, and other volumes are soon to follow.

Mrs. Nathaniel Southgate Shaler is preparing to write a life of the late Dean Shaler. She appeals for letters, anecdotes, or reminiscences, and asks that these be sent to her at 1775 Massachusetts Avenue, Washington, D. C.

Ferdinand Brunetière, who died in Paris last Sunday, was born at Toulon in 1849 and received his education in Marseilles. It was his original intention to become a teacher, but having failed in his Normal School examination in 1869, he was prevented from a second attempt by the war of 1870. He then devoted himself to the general study of literature, and in 1875 first attracted attention to himself by a brilliant review of M. Wallon's "St. Louis et Son Temps." Soon afterward he joined the staff of the *Revue des Deux Mondes*, of which in course of time he became first the secretary and then the editor. His reputation as a writer led naturally to his selection as a teacher, and in 1886 he was appointed professor of the French literature and language at the École Normale. In the following year he received the cross of the Legion of Honor, and in 1893 he was appointed a lecturer at the Sorbonne and elected a member of the French Academy. His works include: "Éducation et Instruction," "Époques du Théâtre," "Essais sur la Littérature Contemporaine," "Études Critiques," "Évolution de la Poésie," "Évolution des Genres," "Roman Naturaliste," "Manuel de l'Histoire de la Littérature Française," "Balzac." The last-named monograph has just appeared in English in the French Men of Letters published by J. B. Lippincott Co.

The death of Miss Mary Bateson, November 30, takes away one of the best of the younger Cambridge historians. Miss Bateson was the daughter of Dr. W. H. Bateson, master of St. John's College, and was educated at Newnham, taking the Historical Tripos in 1887 and standing just below the senior of the year. She continued at Newnham as fellow. As a student she took a wide range. Her best known work is a chapter on "The French in America," contributed to the "Cambridge Modern History," but her interest was more particularly in the Middle Ages, and she published a series of papers on the complicated municipal and legal history of mediæval England. It was proper, therefore, that she should have been chosen by the Syndics of the Cambridge University Press as one of the editors of the forthcoming "Cambridge Mediæval History." She was withal as much esteemed for the simplicity and rectitude of her character as for her attainments.

The death is announced of Dr. Hans Zwiedineck, professor of modern history in the University of Graz. He was born in Frankfort in 1845, and educated at Graz. Among his works are the "Deutsche Geschichte von dem Untergang des alten bis zur Gründung des neuen Kaiserthums" and "Venedig als Weltmarkt und Weltstadt."

Herbert Putnam, librarian of Congress, says in his annual report, just issued, that in size and in importance of content the gift of Dr. Stuyvesant Fish Morris of New

York must rank first among the accessions of the year. Mr. Putnam adds:

It was only last year that Dr. Morris presented to the library an elaborate historical collection of 860 letters, addressed to Martin Van Buren, together with a large number of printed circulars and political broadsides typical of the campaign methods of those times. In the year just past, the same donor has presented nearly 1,700 similar letters and political publications, thereby contributing all that remained of the Van Buren collection, with the exception of a few of the more intimate family letters.

The latest donation contains many documents in Van Buren's own handwriting, and it is "particularly rich in its bearing upon the political events of his Administration." For some years the library has owned other valuable papers of this period, presented by Mrs. Smith Thompson Van Buren. Through the accessions obtained from Dr. Morris, the library now possesses a remarkably complete collection. Eighteen letters written by Zachary Taylor to Col. J. P. Taylor during service in the war with Mexico, have come to the library by the gift of Capt. Taylor, U. S. A. As they were written in full family confidence, their contents are of permanent interest.

The regents of the University of California have provided for the establishment of an "Academy of Pacific Coast History," with the Bancroft collection as a nucleus. The academy is to be installed in the new university library building, for which the late C. F. Dole left \$750,000. The expense of maintenance is estimated at \$10,000 a year, which is to be met temporarily by private subscriptions. There will be a curator and special staff of assistants.

The following table, made up from the reports submitted to the Department of Education at Albany, shows the number of volumes in each of the more important of the university and college libraries in this State, the amount spent for books and the amount paid for salaries during the last year for which reports are at hand:

Institution.	No. vols. in library.	Annual amount for b'ks.	Annual amount for sal.
Columbia University	375,525	\$28,052	\$56,389
Cornell University	311,897	18,368	14,485
N. Y. Univ. (gen. library)	56,078	1,318	1,397
Syracuse University	54,177	2,191	3,547
Vassar College	50,276	4,845	3,228
Hamilton College	45,333	956	1,000
Colgate University	45,298	2,798
Hobart College	43,799	916	1,240
Rochester University	42,048	1,956	1,260
Union College	38,490	701	825
College of City of N. Y.	36,481	2,053	2,250
Alfred University	19,421	1,235	710
St. Lawrence University	15,710	99	275
Wells College	12,188	2,045	1,075
Elmira Female College.	6,280	50	300

Outside of Columbia and Cornell, which are in a class quite by themselves, the largest sum spent per year for books (inclusive of periodicals and bindings) is \$4,845, and the largest amount paid for salaries of library staff is \$3,547, while such old and well-known institutions as Hamilton and Union spend respectively \$956 and \$701 for books, and \$1,000 and \$825 for salaries. Many small and obscure village libraries in the State are receiving better support than this. Including Columbia and Cornell, the total amount spent by the fifteen libraries named above was \$67,587 for books and \$67,981 for salaries. The former of these items is less by \$20,000 than the amount spent for the same purpose by the Brooklyn Public Li-

brary; while the total salaries paid is less by \$4,000 than the amount paid in the New York State Library alone; it is less than half that paid in the Brooklyn Public Library, and less than one-third the amount paid in the Boston Public Library. A comparison of the figures in the above table with those submitted by the athletic committees of the institutions named, would be instructive.

The American Sociological Society, the American Economic Association, the American Historical Association, the Bibliographical Society of America, and the American Political Science Association will meet this year at Providence, from December 26 to December 29. All five organizations will be the guests of Brown University.

The Bibliographical Society of America has issued a tentative programme for its meeting, to be held December 27. The morning session will be opened by an address by the president, William Coolidge Lane, librarian of Harvard. There will be reports from various committees, including those in Americana, incunabula, and current bibliography. The following papers will be read: "The Bibliographical Work of Historical Societies," Dr. Reuben Gold Thwaites, secretary of the Wisconsin Historical Society; "The Need of a Bibliography of American Colonial Newspapers," Clarence S. Brigham, librarian of the Rhode Island Historical Society; "Plans for a Union Catalogue of American Colonial Laws," Theodore Lee Cole, Washington, D. C.; "Book-hunting as a Sport," Prof. James Westfall Thompson, University of Chicago. The subject for the afternoon session will be "An International Catalogue of the Current Literature of the Social Sciences." The discussion of the bibliography of history will be opened by Dr. E. C. Richardson, librarian of Princeton; and W. C. Ford, library of Congress; of economics by Prof. F. A. Fetter, Cornell; J. C. Schwab, librarian of Yale; and J. J. Macfarlane, Philadelphia Commercial Museum; of sociology by Prof. C. W. Veditz, George Washington University; and C. H. Hastings, Library of Congress; of political science by W. F. Dodd, Library of Congress; and Prof. Paul S. Reinsch, University of Wisconsin; of law by F. W. Schenk, librarian of the University of Chicago Law School, and Prof. George G. Wilson, Brown University.

Following the useful custom of meeting together during the winter recess, the American Philological Association, the Archæological Institute of America, and the managing committee of the American School of Classical Studies in Rome, will hold their sessions at Washington during the first week of January. The programme provides for entertainment as well as for work. We have space only to give the names of those who have registered papers to read: F. G. Ballentine, Bucknell University; W. P. Mustard, Haverford; E. W. Hopkins, Paul Baur, Bernadotte Perrin, T. D. Seymour, A. W. Van Buren, and C. C. Torrey, Yale; R. G. Kent, W. B. McDaniel, W. N. Bates, and G. D. Hadzits, University of Pennsylvania; C. W. Super, Ohio University; R. S. Radford, Elmira College; J. Pickard, University of Missouri; W. H. Goodyear, Brooklyn Institute; E. L. Hewett, fellow of the Institute of American Arch-

æology; K. P. Harrington, Wesleyan; G. D. Kellogg, A. Marquand, H. C. Butler, O. S. Tonks, and A. R. Anderson, Princeton; A. A. Bryant, C. H. Moore, J. W. White, G. H. Chase, E. Cary, and M. Warren, Harvard; E. W. Fay, University of Texas; W. S. Scarborough, Wilberforce University; O. M. Washburn, University High School, Chicago; F. G. Allinson and A. G. Harkness, Brown; C. B. Newcomer and F. W. Kelsey, University of Michigan; E. T. Merrill, Trinity; T. Fitz-Hugh, University of Virginia; H. N. Fowler, Western Reserve; Miss Gisela M. A. Richter, Metropolitan Museum of Art; D. M. Robinson, Johns Hopkins; J. M. Paton and E. von Mach, Cambridge, Mass.; J. E. Harry, University of Cincinnati; H. C. Tolman, Vanderbilt University; A. W. Mildner, Emory and Henry College. The visiting members will be guests of George Washington University and of the Washington Society of the Archaeological Institute.

The steady decrease of students at the University of Athens, the only institution of the kind in Greece, is, according to the *Frankfurter Zeitung*, beginning to trouble the authorities. The decrease has been caused by the fact that foreign students, especially from European and Asiatic Turkey, no longer crowd to Athens, and in order to attract them it is now proposed to relieve them of fees and other university expenses. It is also proposed to enlarge the scope of the institution by adding departments in technology and the branches of economics. The funds for this innovation are furnished by a legacy amounting to about \$1,750,000. The native Greeks themselves still flock to Athens in numbers far exceeding the demands of State and Church, and Greece accordingly has also its problem of a "learned proletariat."

THE HOHENLOHE MEMOIRS.

Denkwürdigkeiten des Fürsten Chlodwig zu Hohenlohe-Schillingsfürst. Im Auftrag des Prinzen Alexander zu Hohenlohe-Schillingsfürst herausgegeben von Friedrich Curtius. Stuttgart und Leipzig: Deutsche Verlags-Anstalt.

Memoirs of Prince Chlodwig of Hohenlohe-Schillingsfürst. English edition supervised by George W. Chrystal, B.A. New York: The Macmillan Co. \$6.00 net.

The instant success of scandal which these memoirs attained has resulted in obscuring even their true personal interest. Gossip and indiscretion have been thrust forward as the main things in a life-record of which the real significance has been too much overlooked. And the large political import of the career and of the events narrated in these volumes has had hard work to disentangle itself from the outcry and recrimination following their appearance.

Prince Hohenlohe was not perhaps a great statesman, but he was a great German. Before the rise of Prussia gave promise of her hegemony among the German States, and their consolidation through her, this Bavarian noble had longed for German unity. In April, 1848, he said: "Deep in the hearts of all Germans lives the quickening belief in a single, free, powerful Fatherland." He was oppressed by "the nullity" of Germany over against other countries. To him it was a sorrowful thing that in foreign lands

one could not boast of being a German, but bad to say: "I am from Hesse; I am a Darmstädter; my country was once a great and mighty nation, but now it is broken up into thirty-eight fragments." Dedicated from early youth to what he called the "erstrebten Einheit Deutschlands," Hohenlohe had peculiar advantages for describing, from his personal point of view, its accomplishment. Here we have no elaborate history composed after the event; but letters and journals written at the time. In many ways Prince Hohenlohe's account of the unification of the German Empire is more instructive than anything that even Bismarck wrote. First, this is not a studied apology; it is the running and contemporary comment of a good observer, with excellent sources of information. Further, Hohenlohe was a South German. He belonged to one of the absorbed states. Hence his story of the process of absorption is written from a standpoint different from the Prussian—and it is the Prussians who have given the world the accepted version. This Bavarian prince becoming, after Königgrätz and Sedan, Chancellor of the German Empire, was in a position to give us a fresh and instructive philosophy of that great political revolution in Europe which we call the rise of united Germany. It is much as if a cultivated Southerner, say Judge Lamar, had left us his rendering of the consolidation of the United States of America after Gettysburg and Appomattox.

As a leading actor, as well as narrator, Prince Hohenlohe was well fitted to play his part. A South German, he was yet without that narrow particularism which so long marked the policy of the smaller states in the Germanic Confederation. A Catholic, he was yet able to appreciate the position of German Protestants, and to perceive the liberating nature of the work wrought by the Reformation. He very early wrote:

The intolerance and hatred of Protestantism, the notion that the Reformation, with all its great philosophic and intellectual consequences, was a mere aberration of the human mind, are so diametrically opposed to my inmost being and point to such a decay that I could never bind myself to render any assistance to that party [the Ultramontane] without repudiating my whole past inner life and all my most sacred convictions.

The Prince was thus happily fitted to play the part of a mediator. This he did most usefully when, as Bavarian Minister, he labored, through such measures as the Zollverein, to bring the scattered parts of Germany into touch. The fires of war finally welded them together, in 1866 and 1870, and with that the Prince had little to do directly. But he consistently represented throughout his long career the national, as against the purely Bavarian or the strictly Prussian, interest. His suspicion of the latter endured to the end. It is highly instructive to note his dread of Prussian Junkerdom. He had in his young manhood thought of it as a threat to the South Germans; in his old age he conceived of it as a threat to the Empire itself. One of the very latest entries in his journal, December 15, 1898, is a sort of summing up of the whole political evolution which he had witnessed and furthered, and an instructive judgment upon it:

When I am thus among Prussian Excel-

lences the contrast between North and South Germany becomes very perceptible to me. South German Liberalism is no match for the young aristocrats. They are too numerous, too powerful, and have the monarchy and the army too much on their side. Moreover, the Centre goes with them: Everything I have seen these four years is made clear by this antithesis. The Germans are right in regarding my presence in Berlin as a guarantee of unity. As I labored from 1866 to 1870 for the union of North and South, so I must strive now to keep Prussia attached to the Empire. For all these gentlemen do not care a fig for the Empire, and would give it up, the sooner the better.

Such an *aperçu* lets us into much of present politics in Germany, as well as past history.

It was partly, as Bismarck explained, because the Junkers could not be envious of Hohenlohe that his political career was possible. His long and able service as Ambassador at Paris was due in part to the fact that he was a *grand seigneur*, apart from the jealousies and the strivings of the cliques that swarmed and schemed in Berlin. Similarly, as Statthalter at Strasbourg, and finally as Chancellor of the Empire, it was Hohenlohe, the Prince of an historic family, that filled the eye. He was a man of fair abilities, of much strength of character, and no little nobility of nature, clear-sighted and steady; but it was what he represented, more than what he was, that made his career. He was staunch to his convictions, and believed in straightforward diplomacy. "The most honorable testimonial of my whole political life," he called it, when among some French secret correspondence, captured in 1870, was found a report stating that before any plot could be executed to engage Bavaria in a war against Prussia, it would be necessary first to get Hohenlohe out of the Ministry (vol. ii., p. 33).

Apart from the now notorious revelations concerning Bismarck's dismissal, these pages throw much incidental light upon that great man. Hohenlohe, it is plain, admired more than he either loved or trusted him. He calls him "the terror of all diplomats." The Czar said that he could talk comfortably with Caprivi, but that he had never been able to converse with Bismarck without a fear of being tricked. More details are given of the secret alliance with Austria in 1879, going behind the Dreikaiserbund, and the fact is made clear that the old Kaiser at first thought the step distinctly one of treachery. Hohenlohe deplored Bismarck's bad manners, giving many illustrations of his *Grobheit*. And he came to be able to read the Chancellor pretty shrewdly. When the swift and startling victories of 1870 made it plain that a plan for a united Germany would speedily be forthcoming, and many were wondering what it would be, Hohenlohe wrote (August 17, 1870): "I doubt if Bismarck will wait long. It is pretty certain that he has his preparations all made, and this seems the more likely from the fact that he has shut himself up at headquarters and refuses to communicate with anybody."

The English translation, so far as we have been able to test it, appears to be fairly satisfactory. It betrays signs of haste, and the printing, especially of French, is carelessly done. On the first page, for example, of the section dealing with the Prince in Paris, there are two

misprints and one mistranslation. The right word is not always chosen, in the rendering. Thus, "all his *deeds* and papers" is not what Professor Curtius meant by "alle seine Papiere und Akten"—as materials for the memoir. Here and there the sense is not caught. The Kaiser is made to say (vol. ii., p. 129) "I shall fall out with Prince Bismarck again over this matter," when what he really said was that he would sharply debate it with him—"in Streit kommen." On the whole, however, the translation seems trustworthy, if not so close and careful as one might desire.

THREE BOOKS ON ITALY.

Glimpses of Italian Court Life. By Tryphosa Bates Batcheller. New York: Doubleday, Page & Co. \$4.80.

The fad of the day in literary style being to avoid style and to aim at colloquial ease, the letter is naturally a favorite form of expression. And now that letter-writing as an art is almost extinct, letter-writing as a fashion is very much to the fore. It satisfies public curiosity for private affairs. It introduces the personal note, the *I*, the little god now most adored by the general reader. In no other form, except the diary, which is nothing more than a series of letters written to one's safest friend, could one say to the public: "I wore my white broadcloth princess gown that is trimmed with Cluny lace embroidered in gold thread, the little white and gold toque to match, and my ropes of pearls."

We have had numerous letters from Italy of late. Maud Howe, as an artist's wife, wrote some charming letters from Roma Beata; Mme. Waddington's correspondence, that of a diplomat's wife, was full of a more mature if less picturesque interest. And now Mrs. Batcheller, as a singer and society woman, has brought out in sumptuous form her letters to her parents, written mainly from Rome, and, to judge from manner and matter, with more than a half-thought towards future publication. They deal principally with the social life of the Italian Court and of the Roman nobility. They are lively, gossipy, perhaps lacking in charm, certainly lacking in maturity. But they are fresh, buoyant, and to the outward eye *ingenuous*; they abound in the names of great people; they see everything *colocur de rose*. And the writer adores Italy—"Italia Adorata"—an undeniable appeal to one who cherishes the same feeling.

The writer had friends alike among the Blacks and the Whites, and moved, or "whirled," in the centre of the "best society" of aristocratic Rome. To a lyric soprano who could take high F with ease and sing arias from the "Magic Flute" in the original key, every salon was open in a country where the voice is a national gift and singing a national love. A brilliant public presentation to Queen Elena at the Quirinal follows closely upon a private audience from Pope Pius X., at the Vatican. Then comes a private audience from the Queen Mother, the ever-charming and lovely Queen Margherita. Receptions, balls, private theatricals, dinners, succeed each other with bewildering rapidity; and through them all walk the great ladies of the Roman nobility, dressed in rich silks

and laces, and wearing superb jewels. Why is it that a woman writer dwells lovingly on externals? We learn so much more about the clothes than the character of these noble Italian ladies.

To many, the special interest of these letters will lie in the glimpses they give of Italian musical life—of opera, or artists and musicians, Ristori, Sgambati, Bustini, Mme. Helbig, Professor Mastrigli, of private recitals by the Joachim Quartet, and public concerts at the Royal Academy of St. Cecilia, the Bach Society, Cherubini Society, and Orchestra Society. Also of interest is the account of the *Industria Femminili*, the society founded by Italian ladies of rank, to encourage and develop the work of Italian peasant women in lace-making and embroidery, which now has branches and successful schools of lace-workers scattered over Italy, in the small mountain towns and in the large cities.

The book would have been improved by more careful editing. The illustrations in photogravure and half-tones are excellent, especially noteworthy being the reproductions of photographs of the Italian sovereigns, of different members of the Roman nobility, of artists and musicians. The few colored illustrations are hard and cold. Large, clear type, a generous page, and rich binding make a volume which in appearance is well suited to the subject.

By Italian Seas. By Ernest C. Peixotto. Illustrated. New York: Charles Scribner's Sons. \$2.50.

Italy of the Italians. By Helen Zimmern. Illustrated. New York: Charles Scribner's Sons. \$1.50.

Among the many books that appear yearly on almost every phase of Italian life and culture, it is a pleasure to open one that reflects the real Italy. Ernest Peixotto is a thorough artist, from eyes to finger-tips. He has lingered in spots out of the usual track and beyond the boundaries of modern Italy. And his book is the record of impressions made by the charm of these unfrequented places on a nature responsive to every appeal of the picturesque. In choosing the title "By Italian Seas," he has followed the spirit rather than the letter of Italian domination. Dalmatia, Malta, Tunis, belong to Italy, not by right of present politics, but of past history and influence. And the seas themselves—the Ligurian, the Adriatic, the Ionian, the Tyrrhene, the Mediterranean, are but great inland lakes, as it were, of a former Italy, and their shores still reflect her art and civilization.

The book is not in any way a consecutive narrative; it is more a collection of separate chapters recording experiences in a life of leisurely travel or quiet sojourn. In one chapter, for example, Mr. Peixotto follows the incurring coast of the Italian Riviera, with its "bold headlands, grown with pines and cedars," its rill-run valleys, and "quaint villages hidden within their depths." Snatches of tradition, of history, of fact, are woven into the description wherever they are needed to give color and light and shade. In another chapter he takes us a charming trip down the Dalmatian coast, that long, thin strip of land, so little travelled, so easy of access, whose front faces Italy and the Adriatic and whose back touches Servia, Herze-

govina, and the rocky defiles of Montenegro:

It is a country of transition. In it the Occident touches the Orient and almost mingles with it. Its coast, inclining toward Italy, has imbibed Latin influence, but once over the mountain wall the Orient begins. In its marts Italians of the coast—the "Bodoli"—meet Turks, and Servians, and other Slavs in turbaned fez and flowing trousers. . . . Bald mountains lift their heads from the water's edge; bleak islands break the horizon with clear-cut silhouettes—with an almost utter lack of verdure, save on the gentler slopes and in the rocky hollows where pale olives and almond-trees shelter their frail branches.

Mr. Peixotto's style is always clear, picturesque and mellow, often poetic, and he draws his word-pictures with the same dexterous touch with which he sketches his pen-and-ink pictures of church spires, tall cypresses, or ruined monasteries. In the more finished drawings, the use of wash, combined in a peculiar way with pen and ink, produces some remarkable panoramic effects, packed with life-like detail.

It is a sudden transition from Mr. Peixotto's book of impressions to Miss Zimmern's book of facts—from the poetic to the practical, the artistic to the commonplace. "Italy of the Italians" is a handbook of new Italy, a guide to the intellectual, political, and social conditions of the present. Miss Zimmern's contention is that Italy's contribution to the modern movement is no less worthy of study than what Italy has handed down from the past. Whether she succeeds in proving her contention is another matter. At least, she has brought together, by reading and research, a quantity of material which will be useful to travellers who are visiting Italy for the first time.

The volume, light and convenient in form, is divided into chapters, made easy for reference by a lavish use of side-titles, or paragraph headings in the text. The subjects treated are: The King, which includes a sketch of the administration; the Press; Literature; the Painters; Sculpture and Architecture; Playhouses, Players, and Plays; Science and Inventions; Philosophy; Agrarian Italy; Industry and Commerce; Underground Italy; Music; Italy at Play. Of these, the chapters on Players and Plays, and Italy at Play, are the best, and give a faithful picture of the light-hearted, amusement-loving people. The least successful chapters are those on art and literature. Where facts are concerned, Miss Zimmern is instructive; where personal bias filters through, her position is radical, anti-church. She preserves, however, a healthy Anglo-Saxon antagonism for the decadent, neurasthenic, and sensual tendencies of recent Italian culture.

We note a few important omissions: In the section on the Press; no mention is made of *La Cultura*, a literary and critical review which stands among the foremost in Europe or America. In the chapter on Music, Giovanni Sgambati is omitted as a composer of instrumental music, yet he is by this time well known on both sides of the Atlantic, through his symphonies, quartets, and piano compositions.

The style of the book is very uneven. At times clear and straightforward, it is often over-embellished with adjectives, and marred by a half-trivial tone and awkward

constructions. It is unfortunate that the work could not have been better illustrated.

CURRENT FICTION.

Thalassa. By Mrs. Baillie-Reynolds. New York: Brentano's.

The perturbed spirit of Curren Bell, or rather of Rochester, is not yet at peace. Feminine fancy still hovers caressingly about the image of a dark and sinister and domineering masculinity, with a sad and mysterious past, and a talent for unactionable brutalities. The thing was greatly overdone the other day in a story called "The Dark Lantern." The hero was altogether too savage to be effective; he came too near actually setting the property dog upon the heroine; and otherwise appeared to torment her not so much as a balm to his world-embittered spirit as for the pure sport of it. In "Thalassa" he is at his best. This story is, in much of its detail as well as in general character, strikingly Brontësque. A girl of English birth and Continental breeding is, at twenty, by her dying father's wish, commended to the care of an old friend of his whom she has never seen. This man is of the Rochester age, experience, temper, and surroundings. He lives alone in the country with an old housekeeper, numerous dogs (of the property sort), and the child of an unhappy union. Into this household enter the heroine, a person of more beauty and less meekness than Jane Eyre, and, consequently, with a somewhat easier row to hoe. However, she is sufficiently abused to give point to her eventual triumph.

But, if all this is true, it is not the whole truth. We have read few recent novels with greater pleasure. In the first place, the author herself is perfectly conscious of the kind of thing she is doing. "Will it be like Wuthering Heights, do you think? I keep on thinking of that!" cries the heroine, as she faces her exile in "Grimwold, Yorkshire." Grimwold turns out to be, in atmosphere, more like Thornfield Hall than Wuthering Heights, but the hint is explicit enough. We suppose, however, that the author may have been hardly conscious how like Jane Eyre's first impression of Mr. Rochester is Aldyth Staveley's first impression of Mr. Orme:

He was a large, roughly built man, of a complexion so dark as to be almost swarthy. His hair was jet black, and his close-cropped head and bull neck gave him the appearance of immense strength. His expression at the moment was savage, and the strong curves of his mouth looked cruel. His dress was careless; he wore riding-breeches and gaiters, and carried a hunting-crop in his hand.

No wonder he stands with his back to the fire when he speaks to her, and turns on his heel when she speaks to him. But this is by no means a novel to be laughed at.

Paul. By E. F. Benson. Philadelphia: J. B. Lippincott Co.

The author of "Dodo" and "The Chalmers" has a talent curiously feminine, by which we do not mean precisely effeminate. He does not mince in his gait or speak in falsetto; but his progress is attended by a kind of emotional *frou-frou*. His characters are always in a flutter of

spirits, whether high or low; it is hard to take such volatile persons with becoming seriousness, however grave the predicament into which the author may for the moment immerse them.

There are really only four persons in this present story: an Englishwoman of pleasant manners and a ruinous passion for stock-gambling, who is kept pretty well in the background; her daughter Norah, who loves Paul, but does not know it; Paul, who loves Norah, but does not know it; Theodore Beckwith, the villain, a loathsome person who naturally marries the heroine. Beckwith is a kind of vampire, physically a weakling, with the monstrous power of feeding his strength by contact with youth and vigor. His chief pleasure is in the exercise of a wanton malice. Having married Norah, he induces Paul to become his secretary, thus securing the companionship of two healthy young creatures whom he may feed upon and in due time torture. He sees to it that they remain in no doubt of their feeling for each other, taking pains to throw them literally into each other's arms. The disappointing thing about the tale is that it is only striking, and not moving at all. The villain is too villainous to be true, and the hero too amiable to engage sympathy; the heroine is simply a nice girl in an awkward position. Paul respects the rights of the husband. Eventually, however, he crushes Beckwith under a motor-car, nearly killing himself in the desperate attempt to save the vampire. But he really does kill the other man, and he really has had a momentary impulse to do it deliberately. This fault preys on his mind for over a hundred pages, during which he takes to drink, and otherwise enjoys himself very little. Finally he atones by rescuing Beckwith's child from being run over by a train. This makes everything as comfortable as possible.

The Viper of Milan. By Marjorie Bowen. New York: McClure, Phillips & Co.

This "romance" which its publishers marvel at and exult in as the work of a young girl of "fifteen or sixteen" (as they somewhat vaguely put it) is at least as silly and superfluous as if she had been fifty or sixty. No cruder bait can be thrown to a gaping public than that of precocity. A sort of pathetic interest, to the friendly or parental eye, will always inhere in these raw attempts, but even as exhibits or "documents" they are seldom worth printing. The story is preceded by an absurd "Publisher's Preface" (which is nothing more than a "reading notice" on a large scale) in which we are called upon to admire this fustian as a notable historical romance. For the rest, the manuscript is in much need of editing. "The pair of thee hold your lives solely at my pleasure"; "She looked strangely like her brother could look," and so on; not to speak of such delightful conjunctions of the romantic and the colloquial as "I have done naught but fight since I left Germany. I am on the sick list." Apart from these special crudities, the tale is neither better nor worse than most others of the kind. It has the merit of brief descriptions and much dialogue, and a kind of go which, to be sure, goes nowhere in particular. In short, the book represents an infinitesimal achieve-

ment, and it would not be serving Miss Bowen to pretend that we find special promise in it.

Gabrielle, Transgressor. By Harris Dickson. Philadelphia: J. B. Lippincott Co.

This is not a tale of the Latin Quarter, and the promise of its title is unfulfilled by any real naughtiness. Gabrielle, a young girl, fresh from a Louisiana convent, merely transgresses *les convenances*. At the same time the author is at pains to achieve one situation which would, we suppose, be called "piquant," and another which faintly approaches actual impropriety. For the rest, this is a romance involving elements sufficiently improbable to assure it a popular title of originality. Nobody has hitherto thought of casting an *ingénue* into relations at once secret, romantic, and blameless, with an heir to the Turkish throne. The means by which the hero is transported to Louisiana, in the nick of time, with all desirable accessories of Oriental luxury, shall remain a secret for all that we shall divulge. Suffice it to say that the author's treatment of the theme makes the yarn rather less absurd than might have been expected.

BOOKS FOR CHILDREN.—II.

One of several additions to Lippincott's Romance Series is "The Romance of Animal Arts and Crafts," compiled by H. Coupin and John Lea, English scholars, who give an interesting account of the various industries of wild life, told in the plain way that children like. For the same series Archibald Williams has compiled "The Romance of Early Exploration," following his earlier stories of modern explorers. The present book brings exploration down to A. D. 1600 beginning with its infancy 200 years before Herodotus. Pictures and maps add desirability to the book. The writer's own manner is one of manly straightforwardness, as free from dullness as from misplaced embellishment. The same firm publishes "Adventures on the Great Rivers," by Richard Stead, in which figure a long line of heroes from the Abbé Huc down to the miners who rushed to Klondyke—a chronicle irresistible to any boy with a soul for wild adventure and wilder beasts. In the Heroes of American History (Harper & Bros.) are two books by Frederick A. Ober, "Ferdinand de Soto and the Invasion of Florida" and "Vasco Nuñez de Balboa." Both of these popular lives, though interesting to adults, are sure to prove attractive to boys and girls who are old enough to read history intelligently. Mr. Ober, who has travelled extensively in the West Indies, as well as in Central and South America, is qualified to present an entertaining narrative of the adventures and achievements of the early explorers.

Passing from true to fictitious adventure we have from the John C. Winston Co. "Lost in the Forbidden Land," by Edward S. Ellis. This is one of three volumes by the same writer constituting a Foreign Adventure Series, and it carries the reader to South America on the wings of marvellous escapes from savages and serpents, accomplished by two Americans, with the aid of a trusty Alabama negro, opportunely found in involuntary residence with a tribe

of Paraguayan Indians. "Dale and Fraser, Sheepmen," a tale of sheep raising in Colorado, by Sidford F. Hamp (W. A. Wilde Co.), adds to ranching experiences a story of hidden treasure. "Signal Lights," by Louisc M. Hopkins (C. M. Clark Publishing Co.), tells of frays with the Indians on the Western plains in the years immediately preceding the civil war, with a lad of eighteen as a prominent figure. G. Manville Fenn's "Tention!" (W. & R. Chambers) is a story of boy life during the Peninsular war, when a youthful private and a more youthful bugler, separated from their regiment by the chances of war, acquire vast experience in perils, rescues, brave endurance, and gallant actions. "The Young Rangers," by Everett T. Tomlinson (W. A. Wilde Co.), belongs to the author's Colonial Series, and is a story of the conquest of Canada, dealing with "prowling redmen and marauding Frenchmen," offset by eccentric and other Americans.

In "Heroes Every Child Should Know," one of Hamilton W. Mabie's well-known series (Doubleday, Page & Co.), the editor takes from the best sources accounts of some twenty heroes, ranging from Perseus to Father Damien. T. Y. Crowell issues two meritorious little volumes, one by H. L. Havell, "Tales from Herodotus," a particularly desirable sort of preparation for children's nourishment, and "Stories from Scottish History," this being a selection with only slight rearrangement, and with disarming apology, by Madalen G. Edgar, from Scott's "Tales of a Grandfather," bringing them into an encouraging compass for to-day's children. A little book called "Great Names and Nations," by Harmon B. Niver (George S. Hulbert & Co.), is for very small readers' profit, whisking them cheerfully through the infancy of the old nations of earth, history and biography being carefully given their due proportions.

George P. Upton translates from German sources (A. C. McClurg & Co.) "Life Stories for Young People," which rather clumsy name is worn by a pleasantly illustrated series, one convenient little volume for each of the subjects, which are William of Orange, the Maid of Orleans, Gudrun, the Nibelungs, with others. McClurg ministers further to the young by the series called Old Tales Retold for Young Readers, a good example being the "Canterbury Tales," rewritten in a simple prose, which yet preserves much of the Chaucerian phrase and rhythm. The skilful reteller is Calvin Dill Wilson, who has dealt similarly with the "Faery Queen." Another series worthy of attention is the Children's Heroes Series, edited by John Lang and published by Dutton. A good instance is the story of Sir Walter Raleigh by Margaret Duncan Kelly, with colored pictures by T. H. Robinson. The volume fits itself ingratiatingly into a small hand. Another noteworthy volume in the same series is "The Story of Joan of Arc" by Andrew Lang. In his novel, "The Monk of Fife," he dealt with the same period, and now he relates the life of the wonderful maid simply and well for children. It is a subject to inspire any writer; and it is well fitted to Mr. Lang's hand.

High among fairy books must be placed Andrew Lang's annual offering—this time "The Orange Fairy Book" (Longmans, Green, & Co.). This volume contains sto-

ries from the natives of Rhodesia, Uganda, the Punjab, Jutland, and various other sources. Some of them, indeed, have been edited from the pages of the *Journal of the Anthropological Institute*. The illustrations, both in color and in black and white, by H. J. Ford are excellent.

"The Russian Grandmother's Wonder Tales," by Louise Seymour Houghton (Charles Scribner's Sons), will, as she suggests, be found reminiscent of Uncle Remus and of Oriental fairy stories, besides carrying touches of Russian folk-lore and the Slavonian background which the little boy and grandmother supply. Lippincott publishes a fairy-story book, "Bluebell and the Sleepy King," by Aubrey Hopwood and Seymour Hicks, telling the amusing adventures of a little girl nurtured on fairy tales and on "Alice in Wonderland." Maud Ballington Booth's "Twilight Fairy Tales" (G. P. Putnam's Sons) tells of a little boy who found the magic land of "Maybe" the more readily for faithfulness in the land of "Is," and so lived cheek by jowl with fairies when he had behaved himself properly. Clifton Johnson's "Birch Tree Fairy Book" (Little, Brown & Co.) is an anthology of many old favorites changed only so far as to contain modified gore and mitigated stepmothers. The Century Company issues "Fairy Tales Retold from Saint Nicholas," sixteen in number, old and new, prose and verse. Mrs. Frances Hodgson Burnett's two little child-size volumes, "Queen Silver-Bell" and "Racketty-Packetty House" (Century Co.) are full of fairies, dolls, humor, and merry little pictures. The Scribners publish in a beautiful new edition "The Queen's Museum and Other Fanciful Tales" of Frank Stockton's creation. The collection includes "The Griffin and the Minor Canon," with other immortals.

The Scribners also publish two new Beard books; one, "The Field and Forest Handy-Book," by D. C. Beard, a guide for boys' activities in making equipment for each season's out-of-door pursuits, from spring kites to winter bob-sleds and snow statues, with log houses and fire engines, and all the comforts of the changing year. The other, "Things Worth Doing, and How to Do Them," by Lina and Adelia B. Beard, the authors' fourth book for girls, gives directions for a great variety of useful and amusing objects and occupations. How to find the principal constellations, and how to inaugurate a circus in the nursery, are but two of the feet by which to judge this Hercules. Everything is described and illustrated with the utmost care and clearness.

"Why the Robin's Breast is Red," by Emma Gellibrand (Fleming H. Revell), is a thin volume, but a stout exemplification of that antropomorphism which is the besetting sin of nature books, and particularly bird books. Here is Jenny Wren deserted by Bull Finch, and dying of love for Robin Redbreast, like any Camille. Douglas English, in a second edition of "Wee Tim'rous Beasties" (S. H. Bousfield & Co.), humanizes his creatures to some extent, but as a naturalist and not a novelist, adding a wealth of the photographic illustrations which are his specialty.

The Frederick A. Stokes Company publishes "The Wild Flower Book for Young

People," by Alice Lounsberry, a happy combination of story and botany, illustrated. Margaret Coulson Walker's "Lady Hollyhock and Her Friends" (the Baker & Taylor Co.) is full of delightful illustrated hints for making dolls and other humans out of flowers and vegetables.

Books about children for grown-ups are "The Very Small Person," by Annie Hamilton Donnell (Harper & Bros.), a volume full of misunderstood children with anarchistic feelings, yet warranted to bring tears; Mrs. Henry De La Pasture's "A Toy Tragedy" (E. P. Dutton & Co.); "Dearlove," by Frances Campbell (Dutton), a tale of a vacation carnival of make-believe; and "Polly and the Aunt," by M. E. (Houghton, Mifflin & Co.), a child-biography as distinguished and as healthy as childhood itself. "The Hill-top Girl," by L. T. Meade (J. B. Lippincott Co.) is a magnified non-natural picture of girls and their guardians.

Good straightaway stories for the plain citizens of girl-land, are "A Borrowed Sister," by Eliza Orne White (Houghton, Mifflin & Co.), and Carolyn Wells's "Dorrance Doings" (W. A. Wilde Co.). "Merrylips," by Beulah Marie Dix (Macmillan Co.), is of the adventurous order, made semi-historic by putting the little heroine with her boy's disguise into the thick of Cavalier and Roundhead troubles. "The Wisbone Boat," by Alice C. D. Riley (H. M. Caldwell Co.), if it does not wholly suggest "Alice in Wonderland," was obviously suggested by it. There was probably a point, however, at which the frog who tried to emulate the ox was amusing, and this wonder-book is not without cleverness. Charles J. Bellamy in "The Wonder Children" (Macmillan Co.) blends fairies and boys in a group of stories admonitory but readable. Julia A. Schwartz's "Elinor's College Career" (Little, Brown & Co.) is more really a college story and less a dwarf novel than usual. From the same firm comes "A Sheaf of Stories," by Susan Coolidge, full of the habitual good sense and good English of that lamented writer. "The Airship Dragonfly," by William John Hopkins (Doubleday, Page & Co.), dwells in dizzy heights, its aerial soarings equalled only by the wiles of the smuggler and the beneficent arts and crafts of its highly endowed youngsters.

The fifth edition of John Denison Champlin's "Young Folks' Cyclopædia of Persons and Places" (Henry Holt & Co.) will be welcomed by all boys and girls of alert, inquiring mind. This edition has been brought down to May of the present year. Among the events recorded are the Russo-Japanese war, the establishment of Norway as an independent kingdom, the Baltimore fire, the eruption of Vesuvius in 1906, and the destruction of San Francisco. Among the new persons to whom space is given are Oyama, Togo, Kuropatkin, Rojestvensky, and the new Pope, Pius X.

NOTES FOR BIBLIOPHILES.

"Where are the book shops of old time?" sang Austin Dobson. Thomas Gosden, publisher, bookseller, engraver, bookbinder, fisherman, and sportsman, who did business at "The Sportsman's Repository," is introduced to bibliophiles of to-day by William

Loring Andrews in his book just issued from the Gillis Press—an edition limited to 125 copies on Van Gelder paper and 32 copies on Japan paper. Gosden, 1780-1840, has been known as an engraver of prints, mostly sporting subjects, or as a binder of angling books. Mr. Andrews has reproduced his eight-page "Catalogue of Engravings and Books on Angling and Field Sports," issued in 1825, which shows the character of his business. As a publisher Gosden is best known by his reprint of Zouch's "Life of Walton," and by the ninth Hawkins edition of Walton's "Angler." Each of these contains a prefatory "advertisement" by him. Though Gosden made the designs of all his bindings, and no doubt cut his own tools and stamps, Mr. Andrews has not found evidence that he actually did binding with his own hands. Specimens of his stamped or stamped and tooled bindings occasionally turn up in the market. They are always decorated with angling or sporting subjects. Besides the handsome title-page, engraved by Sidney L. Smith, the volume contains sixteen fine reproductions in photogravure of prints, bindings, etc., executed by Gosden.

Harvard University Library has recently acquired a complete set of the rare original folio issue of *Spectator*. The first number appeared on March 1, 1711; the last, No. 555, December 6, 1712. The periodical was, however, revived on June 18, 1714, when No. 556 appeared. Eighty additional issues were issued; the last was numbered 636, though it was actually 635, for No. 607 was skipped. A few additional copies of two different periodicals with the title the *Spectator* were published in 1716, but with these Addison had no connection. One series began on January 3, 1716, and continued for at least nineteen issues, No. 19 being dated March 11. These nineteen numbers are also in the Harvard library. Another series began in June, 1716, of which Nos. 2 to 8 are included in the set recently acquired by that library. Nos. 2 and 3 are marked "given gratis"; the later numbers are priced at three half-pence. The Harvard set was formerly Malone's, and has a few manuscript notes by him. When sold at Sotheby's in 1901, it brought the ridiculously low price of £7. It has since been rebound by Riviere, and Harvard paid \$500 for it. The set is not unique. Robert Hoe of this city has a fine complete set, 635 numbers, entirely untrimmed.

On Monday, December 17, the Anderson Auction Company of this city offers a collection of books gathered from various sources. The series, illustrated by Cruikshank, is unusual, including some of the most sought-for pieces. Most notable, perhaps, is the first edition of both series of Grimm's Tales, 1823-1826. The first editions of Dickens include two sets of "Oliver Twist," 1838, both being the first issue with title reading "By Boz"; two sets of the "Memoirs of Grimaldi," two volumes, 1838, both having the last plate in the earliest state; and "Master Humphrey's Clock," 1840-1841, in the original eighty-eight weekly parts. The two most valuable volumes in the sale are no doubt Keats's "Poems," 1817, and "Lamia, Isabella, the Eve of St. Agnes, and Other Poems," 1820, both in the original boards, uncut, and each having verses in Keats's auto-

graph inserted. They were formerly Frederick Locker's copies, and each contains notes in his autograph as well as his book-plate. Among other items of Americana are: Mackenzie's "Voyages," 1801; and Heriot's "History of Canada," 1804, boards, uncut. There are a few volumes of early poetry and plays, including Thomas Carew's "Poems," 1640; Massinger's "The Picture," 1630; and three plays by Shirley, "The Duke's Mistress," 1638, "The Maides Revenge," 1639, and "Arcadia," 1640. A few good autograph letters and documents are included: a letter, signed, of Washington, written from West Point, July 22, 1779, giving an account of the battle of Stony Point; an autograph letter, signed, of Lincoln, written December 17, 1863, to Thurlow Weed; and several letters of Emerson.

The sale of the fourth part of the library of Wilberforce Eames, which begins at the rooms of the Anderson Auction Co. in this city to-day, is continued to-morrow afternoon and evening. Among the items offered to-morrow are catalogues of many important old-time sales, as: Heber, 77 days' sale, 1834-1836; Hibbert, 42 days' sale, 1829; Libri, 1847-1868, and Tite, 1874.

On December 14 and 15, Sotheby, Wilkinson & Hodge offer at auction in London a collection of books and manuscripts, including the library and correspondence of Charles Lever, sold by order of his grandson. Some of the books contain Lever's autograph; a collection of his novels in eleven volumes has an especially interesting inscription, having been given by him to his wife, and on her death to his daughter Julia. The manuscripts include 310 letters by Lever himself to his wife and daughter, and letters from Dickens, Thackeray, Carlyle, Macaulay, Lover, Trollope, and others, written to Lever. Among the other properties are seven out of the nine Shakspeare quartos which A. W. Pollard's investigations led him to believe were bound up as remainders by some bookseller, perhaps shortly before the appearance of the first folio. These are "A Midsommer Night's Dreame," Roberts, 1600; "The Merchant of Venice," Roberts, 1600; "King Lear," Nathaniel Butter, 1608; "The Whole Contention Betweene the Two Famous Houses Lancaster and Yorke" [1619]; "Pericles," 1619; and the two spurious plays, "Sir John Oldcastle," 1600, and "A Yorkshire Tragedie," 1619. The last four were printed for Thomas Pavier, the imprint reading "for T. P." There is a copy of "The Two Noble Kinsmen," first edition, 1634, according to the title, by Fletcher and Shakspeare; and a copy of "A Pleasant Comedie of Fair Em, the Miller's Daughter," first edition, 1631, which has been ascribed to Shakspeare. There are also copies of the second and fourth folios, the former having the leaf of verses in facsimile. There are ten out of the twelve drawings made by William Blake to illustrate "Paradise Lost"; and an old folio scrapbook, containing a large number of original sketches, engravings, trial proofs, etc., by Blake. The Keats material, sold by a descendant of John Taylor of the firm of Taylor & Hessey, Keats's publishers, is also of unusual interest. There is a portrait in sepia on a piece of cardboard 5 1-16 by 3 1/2 inches, with this inscription in Severn's autograph at the bottom: "28 Jany.

3 o'clock mornig. drawn to keep me awake, a deadly sweat was on him all this night." Another portrait, a pencil drawing, by William Hilton, apparently unpublished, shows Keats seated at a table, his chin resting on his left hand. The lot includes also a lock of Keats's hair, with endorsement by Richard Woodhouse; and a "testamentary Paper" being a sort of will written by Keats when he was just about to start on a voyage to Naples.

At the auction of the Duke of Sutherland's Trentham Hall Library, by Sotheby, Wilkinson & Hodge, in London during the latter part of November, the following high prices were realized: Æsop, with German woodcuts, 1501, £25; "Breviarum de Camera secundum Usum Romanum," 1494, £29 10s.; Coryat's "Crudivities," 1611, £36 10s.; Erasmus's New Testament in Greek and Latin, first five editions, 1516-1535, £39 10s.; Froissart's "Chronicles," Pynson, 1523-1525, £30; Gower's "De Confessione Amantis," 1554, £35; Higden's "Polychronicon," 1527, £29 10s.; Ben Jonson's copy of Martial, with autograph and manuscript notes. £100; Le Roy's "Les Politiques d'Aristote," 1576-1579, dedication copy to Henry III. of France and Poland, bound by Clovis Eve, £660; Melanchthon's copy of Homer's "Odyssey," 1525, £26 10s.; English manuscript Psalter, fourteenth century, illuminated, £325; Earl of Pembroke's "Poems," 1660, £20; third folio of Shakspeare, 1664, £390.

Three of Shelley's note books, which had been given by Sir Percy and Lady Shelley to the late Richard Garnett, were the most valuable items in Dr. Garnett's library which was dispersed at auction by Sotheby's on December 6. They brought, according to cabled report, £3,000, and were bought, it is said, for an American. Shelley's earliest drafts of his verses, such as those which fill the pages of these note books, were crudely written, in great haste, and sometimes hardly decipherable. Trelawney thus described a similar first draft of a poem:

It was a frightful scrawl; words smeared out with his finger, and one upon the other over and over in tiers, and all run together in most "admired disorder." It might have been taken for a sketch of a marsh overgrown with bulrushes, and the blots for wild ducks; such a dashed-off daub as self-conceited artists mistake for a manifestation of genius.

William Michael Rossetti prepared a list of the contents of Dr. Garnett's three note books, indicating those pieces which are apparently unpublished. Among the poems of which early drafts appear are the following: "Ode to the West Wind," written in faint pencil across another poem, three lines in ink, may possibly be complete; the latter portion of "The Sensitive Plant"; "To Night"; "The Masque of Anarchy," nearly, possibly quite, complete; "Good Night"; "A Lament," etc. Among the prose pieces are: the Preface to "The Centi," part of the Preface to "Julian and Maddalo," and part of the Preface to "Prometheus Unbound." The unpublished pieces, while numerous, seem to be short and fragmentary.

At the auction of the library of Gov. Samuel W. Pennypacker, held by Stan. V. Henkels at Philadelphia last week, one of the most important items was the first printed laws of the colony of Penn-

sylvania, printed by Andrew Bradford, 1714. Bound in this copy were four rare Session Laws, 1715-1719, one at least of which is said to be unique. The volume brought \$725. The second printed Pennsylvania laws, 1723, brought \$85. A collection of the Session Laws of Pennsylvania, 1776-1781, printed by John Dunlap, eighteen pieces in one volume, brought \$150. Several of the German and Swedish books reached good prices. Hesselio's "Kort Berettelse," 1725, brought \$110; Böhm's "Getreuer Warnungs Brief," 1742, \$102; "Missive van William Penn," 1684, \$55; Peun's "Further Account of the Province of Pennsylvania," 1685, \$90, a very low price; "A Letter to Mr. Penn, With His Answer," 1688, of which three editions were printed in one year, \$62.50. Holme's "Mapp of ye improved Part of Pennsylvania," 1690, the first engraved map of the region, was bought by the Pennsylvania State Library for \$200—another low price.

An exhibition of fine bindings will be open until December 24 at the book shop of E. D. North, No. 4 East Thirty-ninth Street, in this city. The collection is composed largely of examples of the work of nineteenth-century binders of France, England, and America. There are also examples by earlier binders, and some of the older works bear the coats of arms of famous owners, such as Madame de Pompadour, Louis XIV., Louis XV., and Charles II.

Edwin Davis French, an American designer of book-plates, with an international reputation, died in this city on Saturday. He was born in 1851 and studied at the Art Students' League—of which he was president later, from 1889 to 1891. His friend, Samuel P. Avery, induced him to try his hand at book-plates in 1894, and five years later his work was in such high repute that it was made the subject of a special catalogue. The collection of his plates made by Mr. Avery is now in the New York Public Library. Mr. French sought and secured a wide range of decorative effects in clear line. The product of his twelve years of book-plate drawing was between two and three hundred designs.

Dreamthorp: A Book of Essays Written in the Country. By Alexander Smith. With a biographical and critical introduction by John Hoghen. New York: Mitchell Kennerley. \$1 net.

Half a century has passed since the critics were quarrelling over the writings of Alexander Smith, and his very name is almost forgotten except by professed students of literature. His poetry—"A Life-Drama," "City Poems," and "Edwin of Deira"—was the hone of contention; and the question was whether he was an author of original power or a mere imitator of Tennyson and others of his betters. He was one of the victims of Prof. W. E. Aytoun's "Firmilian, a Spasmodic Tragedy." His output of verse was small, for he died at the age of thirty-seven; but posterity has reached the decision that some, at least, of his work is the product of genuine inspiration. His two novels, "Alfred Hagart's Household" and "Miss Oona McQuarrie," contain interesting sketches of Scottish life, but they are not likely to be reprinted. His prose essays, however, are of more enduring stuff.

"Dreamthorp," published in 1863, is now deservedly revived in a new edition.

Admirers of Stevenson's essays have often remarked the likeness between Stevenson and Hazlitt. Indeed, the younger writer has freely admitted his debt to the elder. In telling how he learned to write, he confesses that he "played the sedulous ape to Hazlitt." To Hazlitt and also, we think, to Alexander Smith. There are, as critics have already noted, many points of resemblance; and Stevenson's "Apology for Idlers" is little more than Smith's "On Vagabonds" brought up to date. Yet the resemblances may be chiefly due to the fact that both Smith and Stevenson derive from Hazlitt, the great master of the discursive essay. The art of writing in this fashion seems to be lost. Lamb was an adept; Thackeray could sometimes do it, as in "Roundabout Papers." But who are their successors? We might mention Andrew Lang, Augustine Birrell, Austen Dobson, Gilbert K. Chesterton, and in this country Agnes Repplier. But these essayists, however excellent their intentions, are all victims of modern journalism. The reader of to-day, who takes his literary quick lunch in snatches, and the editor who caters to him, demand that the essay shall be short and direct. There is no time for loitering by the way, however alluring the outlook; no time for amusing divagations and flights of fancy.

Alexander Smith belongs to the older and more leisurely school. He holds that an essayist is "a chartered libertine and a law unto himself." He stops to describe the scenery, and charming scenery it is. He shows us Dreamthorp, "fallen asleep in the afternoon sunshine:"

Dreamthorp—a castle, a chapel, a lake, a straggling strip of gray houses, with a blue film of smoke over all—lies emhosed in emerald. Summer, with its daisies, runs up to every cottage door. From the little height where I am now sitting I see it beneath me. Nothing could be more peaceful. The wind and the birds fly over it. A passing sunbeam makes brilliant a white gable-end. . . . On the walls of the next Academy's exhibition will hang nothing half so beautiful.

He is never in too much of a hurry to sketch a character or moralize his tale. Yet in spite of this appearance of sauntering he moves surely toward his goal. His whimsicalities converge upon his thesis; beneath all his apparent digressions is an underlying principle.

He ranges through a wide variety of topics, but the idea to which he recurs most often is that death waits at our elbow. Perhaps this turn of melancholy was due to a secret warning that in his own case, at least, the inevitable end could not be long delayed. He touches upon death with humor, with delicate irony, and again with fine gravity. In "A Lark's Flight" he treats of the death of malefactors on the scaffold in a descriptive passage of extraordinary power. He hurls with "unappeasable curiosity" to "wrest from the death of the criminal information as to the great secret in which each is profoundly interested." Yet he is driven back from the quest, baffled. His search, after all, has carried him no further into the great enigma than a child of ten can penetrate. Death may not, he concludes, "be so difficult, may not be so terrible, as our fears whisper. The dead keep their

secrets, and in a little while we shall be as wise as they—and as taciturn."

Americans of the bygone generation had an opportunity to read "Dreamthorp" in the reprint published in Boston in 1864. Those fortunate oldsters will be glad to greet a former acquaintance in this excellent new edition, with its competent introduction by John Hoghen. Those who are not familiar with Alexander Smith's prose, with its happy turns and occasionally daring tropes may put down the book as worth buying and reading.

Among Country Schools. By O. J. Keru. Boston: Ginn and Company. \$1.25.

In refreshingly vigorous, unconventional style Mr. Kern, superintendent of schools in Winnebago County, Illinois, sets forth the movements on foot in the Middle West for the improvement of country schools. These movements include the erection of attractive buildings, the improvement of school grounds by landscape gardening, the establishment of school gardens, the decoration of class rooms, travelling art exhibits, permanent and travelling libraries, better-trained teachers, and better programmes of study. A striking feature is the increased attention to scientific agriculture. This is one important phase of the general movement to make country life more profitable and attractive, and to check the tide of emigration from country to city. Most striking of all is the growing tendency to consolidate the small scattered schools of each township into a single well-graded school, centrally located, with daily transportation of pupils from and to their homes at public expense.

Any one who desires information as to the ways and means, and the actual results of experience in carrying out these reforms, or a good discussion of the financial problems involved, will do well to read this book. Here is a county superintendent with ideas, the courage of his convictions, and the ability to persuade taxpayers to look at the matter from his point of view. "There is no halo coming" to the men who bring about these reforms, says Superintendent Kern. He is quite right. The shame is that more men in his position are not awake to their duty and their opportunity.

Drama.

Molière. A Biography. By H. C. Chatfield-Taylor. With an introduction by T. F. Crane. New York: Duffield & Co. \$3 net.

If Sainte-Beuve was right when he said that every man who knows how to read "makes one more reader for Molière," his saying is likely to become as true for the English-speaking world as it has been for the French. While Corneille, Racine, and La Fontaine do not appear to command much interest nowadays among American and English readers, Molière, on the contrary, is the object of a revival as enthusiastic as it is general, to which sundry manifestations of recent date, on both sides of the ocean, bear unmistakable testimony.

The latest evidence of this ever-present interest in the most modern of French seventeenth-century dramatists is the appear-

ance of this new biography by an American writer. It is to satisfy the curiosity of the layman, the general reader who wants to know Molière, and yet cannot read French, that Mr. Chatfield-Taylor has obviously written this handsomely illustrated and beautifully printed book. Therefore we have no right to complain of not finding in this biography developments or discussions that the very title forbids us to expect; no generalities on the French comedy before Molière, no attempt to show the influence of Molière's art at home and abroad, not a word about the deficiencies of his style—that famous bone of contention among French critics from La Bruyère down to Edmond Scherer.

On the other hand we find a good, readable, and reliable story of his life, his career, and his plays; a true and often brilliant sketch of the dramatic, the literary, and the court life of the time; a clear and not too monotonous analysis of the best comedies; and all this is written in an easy and chatty style by a man of the world who speaks to men of the world, interspersing his recital with philosophical remarks, comparisons with things as they are now, *obiter dicta* from friends known and unknown, pleasantries on the delicate urbanity of the Parisian hackmen. But this conversationalist is not a superficial and hastily informed writer. He has spared neither time nor trouble to place before his reader an accurate and up-to-date likeness of his hero. He has read all that was essential to the subject, gone to the sources, visited the landmarks, examined the documents, weighed the arguments, sifted the evidence on all contested points, and finally formed a personal opinion which he submits candidly, without disguising a strong preference for a good anecdote and picturesque story, even when they are not substantiated by irrefutable authorities. His chapter on *Tartuffe* contains, if we dare use a kind of language that he does not seem to be afraid of, "a scoop" on the recent rival biographers of Molière, by giving the latest interpretation of *Tartuffe's* identity, as explained by Raoul Allier in his "*Cabale des Dévots*."

The book presents an authentic and, as far as possible, exhaustive story of the great comedian's life, divided into its three well-defined periods; from 1622 to 1643, his youth and early education as a scion of a well-to-do middle-class Parisian family; from 1643 to 1658, his "barnstorming" career through the provinces, with its various incidents, told by local police records; finally, from 1658 to 1673, his return to Paris, his fifteen years of literary activity, histrionic successes, and managerial responsibility. The deadly strain of this last period told on his weakened health, and cut off this scoffer at medicine at the age of fifty-one—from twenty to thirty years before all the great writers of his generation. When we remember that we have not ten lines of Molière's handwriting, that for his early career we have to rely on a biography written in 1705, thirty-five years after his death, that his family relations have been obscured by anonymous slanders as difficult to refute as to believe, and that his whole biography is built on scraps of evidence gathered from provincial records, legal papers,

deeds, entries on birth and death registers, bits of gossip scattered through the correspondence of contemporaries and pamphlets of enemies, it is indeed remarkable that such a continuous and, as a whole, satisfactory account should be written.

Mr. Chatfield-Taylor distributes his story over eighteen chapters, in which the chronological order is respected to the extent of placing together under one strangely chosen title, productions as different as "*Le Bourgeois Gentilhomme*," "*L'Avare*," and "*George Dandin*," and separating in chapters widely apart such plays as "*Les Précieuses Ridicules*" and "*Les Femmes Savantes*." Elsewhere, fortunately, the author was less afraid of taking liberties with chronology. To that inconsistency we owe some excellent chapters such as that on Molière and the Physicians. The work of a biographer must be one of condensation and arrangement. If there was more of both, we might perhaps have had of Molière as a man and of the general aim of his work as a censor of society a more vivid and consistent idea. The chronology and bibliography at the end of the book are most helpful, although the latter leaves out books that touch on the literary side of Molière, and therefore does not pretend to be exhaustive. Professor Crane fittingly introduces the subject, and nobody could do it with more authority than the author of two scholarly books on that same period.

Slips are comparatively few in this book of 446 pages. On page 90 Renaudot is meant, not Renoudot; on 392 the word *ainsi* must be supplied in the first line of Cléante's speech. The extracts from the plays are judiciously chosen and felicitously translated.

"On the Safeguarding of Life in Theatres" is a reprint, with elaborations, of an address delivered last winter before the American Society of Mechanical Engineers by the president, John R. Freeman. It contains much matter of vital importance to the public in general and to all public officers responsible for precautions against fire in places of entertainment. It is a scientific treatise by an expert, and its statements are amply fortified by facts, figures, and illustrations. Some of these are exceedingly disquieting. Like other qualified students of the subject, Mr. Freeman holds and practically demonstrates that the great safeguards against the recurrence of such calamities as that of the Iroquois Theatre, in Chicago, are ample, automatic smoke vents over the stage, a plentiful supply of automatic sprinklers, and ready means of exit. Most important of all are the smoke vents, which, according to the building law in this city, must, in combined area, be equal to one-eighth of the area of the stage. In nearly all the most fatal theatre fires in this country and in Europe, the loss of life has been due mainly to the asphyxiating smoke and gases pouring into the auditorium through the proscenium arch. Yet Mr. Freeman maintains that in only a small percentage of even the newest theatres in this country are these smoke vents sufficiently large or so arranged as to be instantly serviceable. In many cases, he says, they are covered by wire screens, which in case of fire would be almost instantly choked by char-

red fragments, thus stopping the up-draught in which the sole salvation of the audience would lie. In other cases the machinery for the automatic opening of the vents is altogether inadequate. Moreover, Mr. Freeman seems to prove that there is the smallest justification for the faith that is often put in the efficacy of the so-called asbestos curtain. Further, he maintains that no "fireproofing" substance is of much account where there is a considerable body of flame. But this is rather beside the point. The object of the fireproofing, as it is called, is to prevent a fire from beginning, and for this purpose it is undoubtedly efficacious, as was clearly shown by the experiments of Lester Wallack and Dion Boucicault thirty years ago, to which Mr. Freeman alludes, and of which the writer of this paragraph was an eye-witness. But Mr. Freeman's paper is worthy of serious attention on the part of all fire and building authorities.

The Dramatic Revival Society, of which F. R. Benson, J. T. Grein, G. H. Burrows, and W. T. Stead are the moving spirits, seems to be making solid progress in England. It has found support in powerful quarters, and now issues a proclamation, of which the following is the main part:

The first object of this society is to facilitate and encourage amateur dramatic representations throughout the country, especially in villages by the villagers themselves, in schools by the scholars, for purposes of education and recreation. The extraordinary potency of the dramatic method as an instrument of elementary education has been such a revelation to some of us that we may paraphrase Wagner's well-known saying and declare that in the drama there lies the spiritual seed and kernel of all poetic and national ethical culture. Our elementary schools will never truly succeed in stimulating the sluggish mind of our youth until the drama's all-powerful assistance has been completely recognized and guaranteed. The society has established a central office where the experience of each may be rendered available for the service of all and has secured in many counties a representative who will organize local committees. . . . In this way it is hoped that the society will be able to do much—(a) to give a new stimulus to the methods of elementary education; (b) to provide instructive and intellectual recreation for rural districts; (c) to popularize among the British people the dramatic masterpieces of all times and countries; (d) to assist in the revival and production of pageants, mysteries, moralities, lyrical, and poetical plays; and (e) to encourage dramatic experiments of untried authors.

W. B. Yeats's new poetic play of "*Deirdre*," given in the Abbey Theatre, Dublin, is reported a great success. The plot is taken from the concluding scene of the famous story of Naisi and Deirdre, in which the lovers are decoyed and slain by King Conchobar. Miss Derragh played the emotional part of Deirdre with fine effect.

Music.

TWO OPERATIC NOVELTIES.

At the Metropolitan Opera House Heinrich Conried produced two of his promised novelties in the second week of his season. Concerning the first of these novelties, Giordano's "*Fedora*," little need be said. It is far from being a masterpiece, and it was obviously produced chiefly in order to give

Lina Cavalleri a chance to make her début in America in a "prima donna opera"—a work providing an opportunity to show that she has rare personal beauty, and that she is at the same time a good vocalist and a better actress. Giordano's work is, like so many operas of the modern Italian school, based on a popular play. Yet his powers of invention are feeble, and neither in the vocal melody nor in the orchestral score is there sufficient charm to counteract the disagreeably choppy effect of the staccato dialogue as set to music.

Far more successful was the second novelty—an operatic version by Raoul Gunsbourg of Berlioz's dramatic legend, "La Damnation de Faust." While there is reason to believe that Berlioz wrote concert music chiefly because he could not get his operas accepted, there is no record, so far as known to the writer, of his having ever thought of his "Faust" in connection with the theatre. He failed even in his efforts to acclimate it in Paris as a concert piece. The first attempt, in 1846, landed him in debt, and up to the year of his death, 1869, the Parisians heard nothing of this score but an occasional fragment. The composer never dreamt that his greatest work would one day become popular in the concert hall, and still less that it would be acted on the stage with sumptuous scenic background. Nothing more charming than the aerial ballet which accompanies and illustrates the fairy waltz of the third act has been seen in any theatre that makes a specialty of scenic effects. The march of the Hungarian army to the inspiring strains of the Rakoczy march is another impressive scene; still another, the student carousal in Auerbach's cellar, in which Mr. Corried's forces set a new standard of choral singing by their superb rendering of the fugue. While Goethe saves Faust in the end, Berlioz, with his unique love of the horrible, could not forego the pleasure of sending him to hell; so the audience witnesses an infernal panoramic phantasmagoria of monstrosities and diabolical tortures that might have been painted by Doré. Berlioz's Faust also differs from Goethe's in that he makes the pact with the devil not to gain pleasure but to save Marguerite. The vocal parts were well rendered by Geraldine Farrar, Rousselière, Chalmin, and Plançon.

The Music of To-morrow and Other Studies.
By Lawrence Gilman. New York: The John Lane Co.

The Romantic Composers. By Daniel Gregory Mason. New York: The Macmillan Co. \$1.75 net.

While many magazine editors have come to the conclusion that the reading public does not want essays, the publishers of books, especially of books on musical topics, are sending forth numerous volumes of essays. One such collection, Hubert Parry's "Studies of Great Composers," has passed through eight editions. Parrys, to be sure, do not grow on every tree; but we have musical writers worth reading on this side of the ocean, too. One of these is Lawrence Gilman, whose "Phases of Modern Music" and "Edward MacDowell" are promptly followed by a third little volume of 144 pages. Mr. Gilman is nothing if not modern. Himself an incipient composer, he studies eagerly the latest—the very latest—mani-

festations of musical genius or talent, and makes his readers share his interest, with the aid of an imaginative style and abundant knowledge. It is a little startling—but also comforting—to find this former champion of Richard Strauss declaring that "even the flagrant modernity of Strauss is become—if one may venture to whisper it—a little out-moded, a little *vieux jeu*"; and that "if the 'Domestica' proved an exasperation and a disappointment, 'Salome,' the latest product of Straussian intelligence, has almost the character of an affliction." One of Mr. Gilman's present idols (who may be bowled over, too, later on) is Claude Debussy, of Paris, the man with a "sincere passion for the esoteric." We get from these pages a luminous idea of modern French ideals, on which further light is thrown in a chapter on Vincent d'Indy. Under the head of "Modern Music" Mr. Gilman tries to prove, with perhaps more ingenuity than success, that in the representative music of to-day the "love interest" has come to occupy a subordinate position. Admirers of Wagner will read with great interest what Mr. Gilman has to say on "A Neglected Page" of that composer—the remarkable changes made by him in the Paris version of "Tannhäuser."

Of the seven essays contained in Mr. Mason's book, the one on Chopin is by far the best. It is written with sympathy, based on close familiarity, and gives an excellent idea of the great Pole's revolutionary and uniquely original achievements; yet at the end the author mars it all by echoing those comic traditional critical doubts as to whether Chopin is a fixed star "of the first magnitude," "a giant like Bach, or Mozart, or Handel, or Beethoven," which have been a standing joke in musical circles for several decades. If Chopin has done all those wonderful things, he is certainly as great as any musical Teuton. Very Teutonic is Mr. Mason's estimate of the Hungarian Liszt—or, rather, his estimate is that which used to prevail in Germany, but is now being radically modified, as can be seen in the writings of Riemann, Breithaupt, Leopold Schmidt, and many others, who are beginning to see how well founded was and is the enthusiasm for Liszt shown by Wagner, Bülow, Saint-Saëns, Dvorák, Grieg, MacDowell, Paderewski, D'Albert, Hans Richter, Seidl, Nikisch, and most eminent musicians of our time. Against these men, of course, the reader may accept the verdict of Daniel Gregory Mason that Liszt's methods of writing for the pianoforte are "those of barbarism," and his orchestration "radically vulgar." He may also accept his equally amazing condemnation of Schubert's greatest and most influential songs. If not, he may find compensation in the chapters on Schumann, Mendelssohn, and Berlioz, which are readable and instructive.

On German concert programmes few symphonic writers appear oftener to-day than Anton Bruckner, but in this city his music has been strangely neglected. Since Theodore Thomas produced his seventh symphony (which first established Bruckner's reputation in Europe), twenty years ago, it had not been heard here till last Thursday, when Dr. Muck conducted it at a Carnegie Hall concert of the Boston Symphony Orchestra. Dr. Muck is a Bruck-

ner specialist, and in this score he revealed a wealth of beauty and feeling. The Brucknerites of Germany have written much concerning the tragedy of Bruckner's life—the hopes deferred because of the hostility of the powerful Brahms clique, headed by Hanslick. Yet Bruckner was his own worst enemy, by his lack of moderation. He never knew when to stop; one of his symphonies lasts ninety minutes, and all of them would gain immensely by being condensed to one-half their dimensions. But even as they are, they are more interesting than the symphonic works of Brahms and Strauss; more beautiful in orchestration, deeper in feeling. Dvorák and Tchaikovsky excepted, no composer since Beethoven has written such soulful adagios as Bruckner. The seventh proves this; still more the ninth, which, it is to be hoped, Dr. Muck will also let us hear before he returns to Berlin.

Beethoven's "Pastoral Symphony," which Walter Damrosch has chosen for production by the New York Symphony Orchestra, at the fourth subscription concerts, at Carnegie Hall, next Saturday evening and Sunday afternoon, has not been played in New York during the last six years. The soloist at these concerts will be Moritz Rosenthal.

The season of German opera at London begins at Covent Garden January 17, under the management of Ernst van Dyke. Arthur Nikisch, Leopold Reichwein, and Franz Schalk will be conductors, the last-named in place of Michael Balling, who is ill. Eugène Ysaÿe will conduct performances of "Fidelio."

Charles Santley, the baritone, will celebrate his artistic jubilee next year; a movement is already on foot, with Lord Kilmorey at its head, for a suitable celebration. It is suggested that a jubilee concert should be held in May next at the Albert Hall.

Art.

The Art of the Greeks. By H. B. Walters. With 112 plates and 18 illustrations in the text. New York: The Macmillan Company. \$6.

The last few years have been particularly prolific in histories dealing with Greek sculpture, Greek architecture, Greek vase-painting, and so on. This selection of one branch of Greek art to the exclusion of all others inevitably made the results one-sided. The need was felt more and more for a work on the "art of the Greeks," giving us a complete picture of their artistic activity in every field. Only such a work could trace along many lines the achievements of the Greek genius, which remained the same whether it had marble, bronze, gold, or clay for its material.

Two years ago Mr. Walters contributed a small volume on "Greek Art," to the series of Little Books on Art, published by Methuen & Co. Its purpose was chiefly to review the history of Greek sculpture, painting, architecture, vase-painting, bronze-work, terra-cottas, gems, and coins. Considering the small size of the book, the task was carried out with wonderful suc-

cess. Brief, and more or less popular the account had to be, but it seemed to include everything essential, and, if necessarily incomplete, it was throughout suggestive. Mr. Walters's present "Art of the Greeks" is about five times the size of the former volume. We should expect, therefore, to have the subject treated much more fully, so that the reader, stimulated by the earlier book, might pass on to the new for a more thorough, less superficial understanding. But the voluminous appearance of the new work is misleading. The paper and type are excellent, but, together, they take up so much space that, in spite of bulkiness, the volume contains at most about double the number of words of the primer. Moreover, the smaller book has been incorporated word for word in the larger. Only now and then are some additional paragraphs inserted, and two new chapters have been added, one on the characteristics of Greek art, and one containing introductory remarks on Greek sculpture. "Art of the Greeks" is, in fact, scarcely more than an *édition de luxe* of the little book. As such, if nothing more is looked for, it will be welcomed by many lovers of classical culture. But those who hoped for more and perhaps expected something to take the place of what Prof. A. Michaelis has done for German readers in his volume "Das Altertum" in A. Springer's *Handbuch der Kunstgeschichte*, will be disappointed. Though no bulkier, the German book is far richer, both in matter and in illustrations. In arrangement, however, Mr. Walters's work is superior. Professor Michaelis has chosen the strictly chronological order, dividing his subject into periods and showing the advance made in the different arts during each epoch. The result is that the development and decline of each branch of art cannot be followed with the same clearness as by Mr. Walters's method.

But it is not only that from so high an authority as H. B. Walters we had a right to expect a fuller treatment of the subject; there are omissions which, even within the narrow limits he has set himself, are hardly warranted. In the second chapter, "Beginnings of Greek Art," Mr. Walters gives a short account of the discoveries made in Crete and elsewhere during the last thirty years, which have revealed a pre-Hellenic civilization of the greatest importance. He fully recognizes that Crete was "the primary centre whence this culture was diffused throughout the Eastern Mediterranean," but in enumerating sites and giving illustrations (though he names many already well-known "Mycenean" cities both on the Greek mainland and on the Ægean islands, and though he devotes a whole page to illustrating the finds of this period from Cyprus), the only excavations he mentions on the island of Crete are those by Dr. A. Evans at Knossos. At least a bare mention of the Italian site at Phaestos, excavated under Prof. F. Halbherr, was demanded. The palace unearthed there is in many respects similar to that of Knossos, but with differences that are likely to prove crucial; and the vases, wall-paintings, and inscribed tablets are of singular interest.

We must also draw attention to a slight mistake made by Mr. Walters in his description of early Cretan civilization. On

page 142 he speaks of the pottery from Thera as being now antedated "by the extensive remains of early Cretan painted pottery, remarkable for their naturalism and brilliancy of color." These, he says, "belong to the period 3000-2000 B. C.," and "are known as Kamarais, or 'Early Minoan' ware." He is here referring to Dr. Evans's classification of Cretan pottery into Early Minoan, Middle Minoan, and Late Minoan. The Kamarais ware, however, is placed by Dr. Evans in the Middle Minoan, not the Early Minoan period, which is characterized by much more primitive pottery.

Another omission requires comment. In the year 1901, Prof. A. Furtwängler was commissioned by the Bavarian Prince Regent to make an investigation of the temple of Ægina and its surroundings, which had practically been left undisturbed since 1811, when Cockerell and Haller unearthed the pedimental groups, now the chief treasures of the Glyptothek at Munich. The results of this recent campaign have been published in two large quarto volumes, which appeared early this year. Numerous fragments belonging to the pediments have enabled Professor Furtwängler to advance a new theory as to their reconstruction. Though the new arrangement cannot be regarded as final, it is certain that Thorwaldsen's restoration cannot be right. Mr. Walters almost entirely ignores the recent discoveries. After stating that the sculptures in question were unearthed in 1811 and were largely restored by Thorwaldsen, he continues: "A few additions have been made from the recent excavations, but nothing of importance." And a little later: "The arrangement of the figures in the pediments is not absolutely certain, but that adopted by Thorwaldsen has been generally adhered to." The bibliography at the beginning of the book will be found most useful. But, again, we are surprised at the extraordinary gaps. Why, for instance, is T. H. Middleton's little book on *Ancient Gems* (1891) deemed so all-sufficient that Prof. A. Furtwängler's splendid publication in three volumes, "Die Antike Gemmen" (1900), is found unworthy of notice?

Among the recent accessions to the Metropolitan Museum of Fine Arts, first shown to the public last Friday, are five architectural fragments from the Forum of Trajan, the gift of J. Pierpont Morgan; a small painting by Giovanni di Paolo, an Italian primitive, representing blessed souls received by angels in Paradise; "Madonna and Child," by Pesellino; "Madonna and Child," attributed to Pisanello; a pen drawing by Rembrandt, illustrating the scene from the "Book of Tobit," where Sara is exorcised of the devil Asmodeus through the prayer of her spouse, Tobias, over the burning fish livers; and seventeen pieces of fine Italian, French, and Belgian laces, presented by Mrs. Hamilton W. Cary.

The eleventh annual exhibition of the Water-Color Club of Washington has been opened in the Corcoran Gallery. The first Corcoran prize was awarded to "Boulevard Montparnasse," by H. Hobart Nichols; the second to "Gloucester Neck," by Sarah Sewall Monroe; and honorable mention to "The Home Field," by Robert Coleman Child, and to "A Day of Clouds," by Marlanna Sloan.

Twenty-five pictures by Childe Hassam

are on view at Montross's gallery in this city till December 26. The collection, including works old and new, in oil, water-color, and pastel, represents excellently the range of the artist's work. It confirms his place as the foremost American exponent of the methods of the French impressionist school. The "Brooklyn Bridge" is possibly the finest of all the city scenes that have come from his brush.

The publication of a new mezzotint in colors by S. Arlent-Edwards, after the painting of Miss Davenport, by George Romney, and of an etching, "Cinderella," by Herbert Dicksee, is announced by Wunderlich & Co.

The University of Pennsylvania plans to begin excavations in Northern Egypt on a scale as elaborate as in the expeditions to Nippur, Babylonia. The expedition is to be equipped by Eckley Brinton Coxe, jr.

From his great numismatic collection, Dr. F. Parkes Weber has presented 5,551 pieces to the British Museum, embracing specimens of all ages and styles. A large number of the medals are the modern work of David d'Angers, Roty, and Scharff, and others who have hitherto been unrepresented in the museum.

Science.

Space and Geometry in the Light of Physiological, Psychological, and Physical Inquiry. By Dr. Ernst Mach. From the German by Thomas J. McCormack. Chicago: The Open Court Publishing Co.

To appreciate this important book, one must view it in its relation to certain modern movements in mathematical thought. It will be sufficient to mention here two of these movements, namely, the logical movement and another that may be significantly called the biological. The aim of the former has been to detect and enumerate all definite notions that are indefinable, and all definite propositions that are indemonstrable, to combine these into all possible sets of compatibles, and then by purely deductive processes to determine explicitly the implicit contents of the various sets. The method has been that of postulation and inference; the interest has been, not with actuality or with truth, but exclusively with consistency, or logical coherence. The march has followed two paths—the path of the well-known mathematical rigorists, and the path of modern logic, under the leadership of Boole of England, C. S. Peirce of America, Schröder of Germany, and especially Peano of Italy; and it has been found that these paths converge in the remarkable thesis that mathematics in its ideal form is symbolic logic, and that logic in its ideal form is symbolized mathematics. The effect has been to eliminate intuition, to detach mathematics from experience, from the sensuous world, from reality. To exemplify this tendency to nominalism, it is sufficient to refer to Hilbert's "Fundamental Principles of Geometry." In its attempt to dispense with intuition, this work out-Euclids Euclid by far; points, lines, and planes being nothing but names for undefined entities (replaceable by others) that satisfy a specific set of postulates, assumptions, or axioms.

Meanwhile another movement, originating in another motive, has been going on and rapidly gaining in distinctness and force. In this the aim has been to readjoin mathematics to reality and life, not in the sense of rendering mathematics more applicable to the natural sciences, but in the sense of showing that mathematical thought, however abstract or remote, has been evolved literally and continuously in accordance with the needs of the animal organism out of the most primitive elements or feelings of physiological experience. This is why the movement may be properly called biological. The leader in this great enterprise is Professor Mach, whose "Popular Scientific Lectures" and "Science of Mechanics" have quickened and enlightened both scientific and philosophic thought throughout the western world. The book in hand ought to be read and pondered by every teacher of mathematics and by every educated parent. Physiological space, the space of touch, the space of vision, the space of audition, the space of geometry, the agreements and differences of these, feelings of motions and velocities and accelerations, the biological functions of all these things—such are among the striking themes here treated in a way scarcely less remarkable for its answers than for its questions. The Kantian philosopher will find here reason to reconsider his master's doctrine of space and time. The psychologist will gain startling glimpses of the relations of modern psychology to modern mathematics. And the mathematician of the analyst type will gain a wholesome sense of the fact that the purest offspring of his thought may trace a legitimate genealogy back and down to physical and physiological parentage. Indeed, the stream of the author's discourse contains the waters of many confluent sciences.

The translation is well-nigh perfect. And the publishers are again to be congratulated on their excellent judgment and their generosity in the service of science.

The Log of the Sun. A Chronicle of Nature's Year. By C. William Beebe, with Illustrations by Walter King Stone. New York: Henry Holt & Co. \$3.50 net.

Mr. Beebe has chosen a pleasing title for this series of attractive essays, a number of which have already appeared in the *Evening Post* and other publications. While occasional repetition shows that they were not prepared especially for use in the present connection, as a rule they supplement one another admirably and, without too evident an effort at seasonableness, lead us from January to December. The habits and interrelationships of mammals, birds, reptiles, insects, some forms of sea-life, plants and trees, supply texts for the fifty-two short sketches, one for each week, which, the author tells us, are designed "to inspire enthusiasm in those whose eyes are just opening to the wild beauties of God's out-of-doors."

Few popular writers on nature have the special training required to cover properly so wide a field. Courses in biology generally lead to specialization and a self-centred existence, with a subsequent drying up of the wells of human interests beyond those which immediately concern us. Popularization of nature, therefore, has too often been left to those who are ill-

prepared for the task, with results which have led the public far from the truth in search of animals existing only in their authors' unchecked imaginations. Mr. Beebe, however, has passed through the years of his technical training without losing the freshness of his point of view. His mind responds to the varied stimuli of nature as quickly as a boy's, and with equal enthusiasm and accuracy he presents the results of his observations. We find only one false note in the present volume, and this was sung by a "bob-white" in January! The author's style is more than usually readable; but, while he is not lacking in originality of ideas or expression, his essays would gain in force if they were not, so to speak, all set to the same tune. This monotony of method, however, will doubtless not impress the reader who goes to the book for a breath of mental fresh air, and, rightly, does not take his year out-of-doors at a sitting.

The work of the illustrator ranks in importance with that of the author. Mr. Stone supplies appropriate chapter headings, text cuts, and a full-page drawing, reproduced in flat tints, for each week of the year. Sketchy vistas of country roads and lanes bordered by the now fast-disappearing rail-fences, show Mr. Stone's art at its best. His mammals are excellent, but in bird portraiture he is less convincing, success here seeming to require a special interest in the bird, which makes an artist primarily an ornithologist. The publishers have spared no expense in the preparation of this sumptuous volume. A comparison of it with a copy of the first (and virtually unsold) edition of Thoreau's "Week" is a striking comment on our changed attitude towards nature.

The New York Botanical Garden has lately received nearly seventy-five new species of cacti. Most of them were obtained in the elevated desert valleys of Mexico by Dr. Daniel Trembley Macdougall, of the Carnegie Institution of Washington, and Dr. J. N. Rose of the United States National Museum. The collection in New York is now rivalled only by the collections in the Royal Gardens at Kew, England; the botanical garden at Berlin, and the outdoor gardens of Sir John Hanbury at La Mortola, Italy.

The Berlin Academy of Sciences some time ago instructed Prof. H. Diels, in conjunction with Prof. G. Schöne, to make preliminary examinations of the large number of classical manuscripts extant dealing with medicine; and the first volume, treating of Hippocrates and Galen, has just been issued.

Prof. Henry Fairfield Osborn has announced that he will not accept the secretaryship of the Smithsonian Institution, but will stay with the American Museum of Natural History in this city.

Dr. Giuseppe Lapponi, who died at Rome last Friday, was best known as the physician who attended Leo XIII. But aside from his prominence as a physician, he had occupied the chair of applied anthropology in the Roman Academy, and as an outgrowth of the lectures delivered before the Academy, he published, in 1906, a summary of his views on occult phenomena, entitled "Hypnotism and Spiritualism" ("Ipnotismo e Spiritismo"). The volume is of interest not merely as a contribution to the subject

of psychic research, but as an official and accredited expression of Roman Catholic opinion along these lines.

Dr. Ferdinand Henrotin, for twenty-five years one of the most prominent physicians of Chicago, died on Sunday. He was born in Brussels in 1847 and came to this country when a boy. He was connected with a number of Chicago hospitals; and he has written many monographs on gynecology and other medical topics.

The natural history library of the late Andrew J. Lloyd is to be offered at auction by C. F. Libbie & Co. of Boston on December 18 and 19. Audubon's *Birds*, 7 v., 1840-1844, the first octavo edition; the *Quadrupeds*, 3 v., 1854; Michaux's "North American Sylva," with the continuation by Nuttall, 5 v., 1859; Baird, Brewer and Ridgway's *Land and Water Birds*, 3 v., 1875-1884; Donovan's "British Insects," 8 v., 1792-1799; Hovey's "Fruits of America," 2 v., 1852-1856; Sowerby's "English Botany," 28 v., 1790-1808; Stephen's "British Entomology," 12 v., 1828-1846, are among the important books with colored plates. There are long runs of a number of scientific periodicals.

Finance.

THE ATTACK ON "TIGHT MONEY."

An interesting attack on New York rates for money was made last week Thursday at the monthly meeting of the Chamber of Commerce. The day before the meeting, rates on the Stock Exchange for loans payable on demand, went as high as 32 per cent. While the meeting was in session, they touched 28, and no demand loans were made that day for less than 20 per cent. The next day, they reached 36; this week, they have been at 38 again. The excessive rates are not new, however, even for the present year. In September, "call money" was loaned at 40 per cent.; last April at 30 per cent. At the end of December, 1905, there was a momentary Wall Street rate of 125 per cent. There have been times—notably in 1899 and 1890—when Stock Exchange loans on demand were made at 186 per cent.

The Chamber of Commerce adopted a resolution instructing its committee on finance and currency to report to it later "upon the practicability of devising measures through which the interest rate beyond 6 per cent. upon call loans made at the New York Stock Exchange can be better regulated than is the case at present." This resolution was adopted after a speech by Jacob H. Schiff, head of the international banking house of Kuhn, Loeb & Co., in which he described these high rates as barbarous. Mr. Schiff further declared that such rates "must in the long run be destructive of the best interests of the country." He added that "there must be means to better regulate such a state of affairs," and that "such means may be actual methods or moral methods." In general, Mr. Schiff's denunciation of the high rates merely repeated what he said in a speech at the Chamber of Commerce last January. He then asserted that the 50 and 125 per cent. call money rates of the period were "a disgrace to any civilized country," and he wound up with the

striking prediction that "if this condition of affairs is not changed, and changed soon, we shall get a panic compared with which the three which have preceded it would be only child's play."

Exactly what is this "call money market," whose rates excite such misgiving? How do lenders escape the 6 per cent. maximum rate of the usury law? This happens because of explicit exemption of "call loans" in the statute. The New York interest law of 1882 reads:

In any case in which advances of money repayable on demand, to an amount not less than \$5,000, are made upon warehouse receipts, bills of lading, certificates of stock, certificates of deposit, bills of exchange, bonds, or other negotiable instruments pledged as collateral security for such repayment, it shall be lawful to receive or contract to receive and collect, as compensation for making such advances, any sum to be agreed upon, in writing, by the parties to such transaction.

So much for the law; next as to the practice. Such rates as those quoted above are paid only by Stock Exchange brokers or speculators, who have purchased stocks with borrowed money and are holding them for the rise. In one corner of the Stock Exchange stand the agents of the banks, offering the "balances of the day" as other brokers offer stocks, and receiving a commission of one-thirty-second of one per cent. on loans effected, where a sale of stocks brings one-eighth of one per cent. commission. To this so-called "loan crowd" go the brokers who are buying stocks and want to procure the necessary money. In the "loan crowd" are paid the spectacular call loan rates. They are rarely paid for more than a day or two. No broker or speculator in his senses would continue, for any length of time, to pay 25 or 50 per cent. interest for money to finance an undertaking; all his profits would surely be eaten up in interest.

A Wall Street borrower will often pay such rates, when he might get a two-months' loan for 6 per cent., or, at the worst, for 6 per cent. plus a "commission" which would bring up the annual rate to 8 or 9. He expects the call money rate presently to fall below 6 per cent. again—perhaps to 3 or 4—and, moreover, he can pay off his "call loan" whenever his speculation is closed up; whereas with a sixty-day loan, he might realize on his stock venture within a week, and yet be left for eight weeks longer with interest running against him. In times of extravagant speculation for the rise, therefore, the Stock Exchange clamors for "call money." But as such speculation naturally accompanies great activity in general trade, resources of lending institutions are absorbed already in ordinary business loans. To provide for Wall Street, the New York bank pays smaller interior institutions to give it the use of their own deposits.

This new money the New York banker will not lend out in long-time loans, because he knows that when interior trade grows active—as at harvest time—the little banks will ask for their money again. But a "call loan" on the Stock Exchange is open to no such objection; if the Western bank telegraphs for repayment, the New York institution calls in the cash from Wall Street. When, however, a hundred or

more of such notices from "the Interior" arrive simultaneously, the Stock Exchange suddenly finds the support of its speculation undermined. If the speculator gives up his borrowed money, he must sell his stocks, and probably at a loss. Therefore he bids an inviting rate of interest, with the idea, either of persuading the inland bank to postpone its call, or of inducing the city bank to trench on its own legally required reserve. In the present season, Wall Street speculators have used both inducements, and both have been successful. It is not at all strange, however, when the position of the lenders is considered, that the borrower should in such circumstances find it necessary to bid abnormally high rates.

This is the simple explanation of 35 and 50 and 100 per cent. call money in New York. Much has been made of the fact that no other great money market has such rates to show. But in that there is nothing mysterious. No other American market deals in "call loans" on such a scale; no foreign market uses the redeposited funds of outside banks on the Stock Exchange with such profusion. Mr. Schiff, in last week's speech, intimated that greedy institutions were to blame, stating "that one of the prominent financial institutions of this city makes it a rule, when money in the morning is only 6 or 7 per cent., to call its loans, and to wait until the rate has advanced—which it naturally does in consequence of large calls—to consent to loan its money again." There unquestionably have been such cases, and Mr. Schiff was right in saying that moral pressure ought to be applied to the offenders. But it is one thing to show how somebody took advantage of an abnormal situation, and quite another to show what caused it. Unless an unnatural condition existed in money and stock markets, justifying unannaturally high rates for money, a bank which did this would probably find, towards the close of the day, that it could not get even the forenoon price. Other local and out-of-town lenders would have "filled the market."

When, therefore, one is told that unless the exorbitant money rates are stopped, we shall have a panic, he will be wise in looking behind the excessive rates to see what caused them. If he finds that cause to be reckless speculation on an insufficient or unstable supply of capital, he will conclude that the high rates will stop when the rash speculation stops, and that if a panic comes, it will have been caused, not by the money quotations, but by the speculation.

 Each, cloth, \$1.50. Leather, \$2.50. Both boxed, leather, \$5.00.

Two Notable Novels praised by the Nation

Mary Moss's **THE POET AND THE PARISH**

A story by one of America's leading critics of an American poet that shows with rare
 humor and insight the tyrannies of the conventions and their justifications. \$1.50.

The Nation: "One is grateful to Miss Moss for having depicted, in these days
 of drivel about the artistic temperament, a poet who, however
 morally irresponsible, is by no means morally invertebrate. . . . A man of sound nature
 whom gross temptation cannot assail. . . . There are no dull or meaningless persons or events,
 and a deeper note seems to sound beneath the trebles and tenors of the social-comedy strain."

The Outlook: "Marks an epoch in contemporary fiction."

William De Morgan's **JOSEPH VANCE**

The Nation: "Seriously we take this to be a novel of uncommon quality
 . . . We hardly know how to suggest the mellowness of this
 story, and therein lies its charm. In detail, it is often brilliant, sometimes exuberant. A
 work of true humor." 2d printing \$1.50.

An Excellent Xmas Gift for Young and Old

Champlin's **YOUNG FOLKS CYCLOPAEDIAS**

NEW 1906 EDITIONS COMMON THINGS PERSONS and PLACES
 Mr. Champlin's other Cyclopaedias for Young Folks are GAMES and SPORTS—
 LITERATURE and ART (including Music)—NATURAL HISTORY

Over 150,000 volumes of these cyclopaedias have been sold.

PER VOLUME, \$2.50. Circular with sample pages on application.

The Nation.

NEW YORK, THURSDAY, DECEMBER 20, 1906.

The Week.

Those persons who professed fear that President Roosevelt's message on the Japanese situation in San Francisco would be full of threats and extra-Constitutional remedies, must confess themselves agreeably disappointed. Mr. Roosevelt says that if the San Francisco and California authorities fail to protect the persons and property of the Japanese, "then the entire power of the Federal Government, *within the limits of the Constitution,*" will be used promptly and vigorously. Again, he speaks of using the Federal forces which he could "lawfully" employ. From the report of Secretary Metcalf, transmitted by Mr. Roosevelt, it appears that the labor unions, the curse of San Francisco and the Pacific Coast, are at the bottom of most of the trouble. It was they who, through the Japanese and Korean Exclusion League, induced the School Board to shut out Japanese children, and it was they who organized and carried on the boycott against the Japanese restaurants. More than that, this boycott was easily terminated by the payment of \$350 to the leader of the boycotters. Certain San Franciscans have tried to make us believe that their civilization and industries, their whole standard of living, are in danger of being subverted by the Japanese. San Francisco still has over 325,000 people; the subjects of the Mikado there number only 6,000, a mere handful. Altogether shameful is the police record of assaults by the more highly civilized Americans upon the Japanese, 281 within the period from May 6, 1906, to November 5, 1906; during that time only nine breaches of the peace by Japanese were reported. Fortunately, there is a President in the White House who is not afraid to stand up for our good name and describe properly the San Francisco outrages.

President Roosevelt has endorsed the plan of the Personnel Board for a reserve list in order to secure younger captains and rear-admirals in the navy. The Board was instituted because there is prospect of a "hump" or block in promotions similar to that after the Civil War. To remedy this threatened congestion, the Board considered two plans: first, promotion by selection, formerly urged by President Roosevelt; and, second, elimination of certain officers by taking them from the active list in order to create the vacancies necessary for rapid advancement.

The Board wisely decided on the second plan. Army and navy officers are convinced that no scheme of promotion by selection of the best can be devised which will not be marred by political or social considerations. The safer way is to eliminate those less fit. The Personnel Board's plan calls for the constitution of a board of officers whenever, on June 30, the ten senior captains average fifty-five years of age, or the ten senior commanders forty-eight years of age, or the ten senior lieutenant-commanders average forty-four years of age. This commission is then to select 15 per cent. of the captains, or 10 per cent. of the commanders, for transfer to the reserve list, and thus force a number of promotions. On behalf of its scheme, the Board urges that it is automatic, yet elastic. In some years there may be enough casualties and retirements to make special action unnecessary. Congress must remember, however, that the adoption of the Board's report as a whole would increase the number of officers below the rank of rear-admiral, from 992, as at present, to 1,500, by adding seventy-five a year. The proper action for Congress to take, as we view the problem, is to go to the root of the trouble and decrease the size of the corps of midshipmen at Annapolis, or resort to the old plan of discharging with a year's pay the surplus graduates. There should be retrenchment rather than enlargement. With the decrease, the necessity for elaborate schemes to regulate promotion will diminish. But if something of the kind should then still be deemed necessary, the report of the Personnel Board contains excellent suggestions as a basis to build on.

In publishing the full correspondence relating to our intervention in Cuba last September, the Administration has not added much to our knowledge, but has certainly proved to all the world that action by our Government was absolutely imperative. The President shrank from intervention, both word and thing, as long as possible, and acquiesced in it, finally, only as a dire necessity. Secretary Taft's cablegrams set forth conclusively how impossible were the people with whom he had to deal in Cuba, and how inextricable the situation. The freedom of his dispatches, and of the President's replies, is probably unexampled in diplomatic correspondence; but the net effect of their massing and publishing is to free this country from the suspicion of meddling officiously in Cuba for selfish advantage.

President Roosevelt's message about

work at Panama reports nearly everything on the Isthmus absolutely perfect. No doubt much of his high praise is deserved. A vast amount of money has been spent upon sanitation, buildings, paving, water-supply, etc., and there is a good deal to show for it. Indeed, the health-record has been so good on the Isthmus in recent months that, as the President says, we probably ought to count upon more sickness, on the average, and a higher death-rate. The President confesses frankly that three days ashore was too short a time for him to pass judgment on the engineering problems. His references to them are, accordingly, meagre. Such as they are, however, they are not reassuring. Take, for example that part of the message in which the President deals with the engineering crux of the whole canal plan—the Gatun dam and the location of the three locks in flight to reach the eighty-five-foot level. This, Mr. Roosevelt admits, yet offers "a serious problem," and he freely grants that "there will be some little risk in connection with the work." The unpleasant truth is that the engineers are by no means satisfied with either the feasibility of this great earth-dam, or the location of the locks. The report of the Chief Engineer shows that further borings are being made in order to allay the grave doubts about the rock bottom; while the location of the locks is so far from being fixed that, Mr. Roosevelt announces, the whole thing is deferred to April next, when Secretary Taft and three engineers will go down to "make the final and conclusive examinations as to the exact site for each lock." Thus it is upon engineering plans confessedly in a state of great uncertainty—for this Gatun dam is vital to the whole project—that contractors are asked to bid, and Congress to vote hundreds of millions. The President announces that a "badge" is to be given to every American who works on the Isthmus, as a sort of membership in a Legion of Honor. This is well enough for those who want it, but the real decoration ought to be reserved for the man who can prevent the waste of money at the Isthmus on ill-considered and ever-changing and possibly unworkable plans.

In deciding to court-martial the senior officers of the Twenty-fifth Infantry battalion, accused of rioting in Brownsville, the President has at last taken the proper military procedure. The officers of a regiment must be held responsible for the conduct of their men. Failure to do so in this, as in many other cases in the past, would make officers still more indifferent to their duty to control their men outside their

garrisons as well as inside. Major Penrose and Capt. Macklin should have been tried at least two months ago—before any of their enlisted men were punished. We welcome this movement now as a sign of sober second thought. There is every indication that before long most, if not all, of the discharged soldiers of the Twenty-fifth Infantry will be reinstated, one by one.

Secretary Shaw's explanation of his "prosperity speech" of last Thursday, at a Washington banquet, is marked by great subtlety. He did not, he replies, give any such advice as "Get down on your knees to-night and pray God to save this country from its prosperity." What he did say was, "We who pray should ask God to save us from any increased prosperity; we have all we can stand." Whether there is or is not any difference, economic or theological, between those two pious sentiments, we imagine that many, even of the Secretary's admirers, have already reminded him to speak for himself in such petitions, and not for other people. There are always Jerry Crunchers with an ill-natured objection to people suspected of "prayin' agin them." The further exposition by Mr. Shaw, that "we are growing more crops than we can harvest, and harvesting more than we can haul to market," would appear to mean a hint, in the nightly petition, that a little adversity be granted us. Even in this somewhat grotesque view there is a substratum of reason. That our "boom" has not only overtaxed the labor and transportation facilities of the producing districts, but has drawn in an exhaustive way on the supplies of capital usually absorbed in industry, is admitted by all competent observers. Justice Brewer touched on one vital consideration in this matter, when, in his speech of Sunday, he declared that "our great expansion and rapid growth in population and resource are developing a habit of extravagance," and that "we have been most unwisely discounting the future." Justice Brewer was speaking primarily of increase in public debts; he might have applied his doctrine still more directly to the incurring of private debt for purpose of outright speculation. Precisely how large a part this form of extravagance has played in causing the "money stringency" and "scarcity of capital" of which one hears so much, it would be difficult to say; every intelligent financier recognizes it as a factor of importance. Regarded from this point of view, Secretary Shaw's prayer to be rescued from greater prosperity may be intelligibly translated into a prayer to be spared a wilder speculation, and in such a petition sober-minded citizens would unquestionably join. The embarrassing part of a check to expanding prosperity, as a

check to the habit of gambling on it, is that the speculators would then turn out to have "discounted" a future which did not come, and to have done so with borrowed money. The "rich men's panic" of 1903 gave us some experience of what sometimes happens under such conditions.

Memory triumphed over hope in the vote of the House, by 188 to 107, not to increase the salary of its members from \$5,000 to \$7,500. All the arguments for this advance in pay—and some of them are good ones—were swept away in the vivid recollection of that Congress which was dubbed the "Salary-Grab Congress," and which was visited with the sovereign displeasure of the people. Yet the chief offence, in that historic example, was the "back-pay" feature of the legislation. That was not imitated this time. The increase proposed would have been entirely prospective. Yet the yea and nay vote was decisively against it. If the vote had been affirmative, the Representatives might have excused themselves on the ground that they are of the class—the salaried class—who have most felt the pinch of prosperity. While the cost of living has risen enormously, while wages have gone up and profits in business have increased, salaries have, as a rule, but slightly advanced—in Congress, not at all. Bradstreet's figures showed last week that the average increase in prices since 1895 has been 55 per cent. We have heard of wages, here and there, going up 10 or 20 per cent., but not 50. The working and salaried classes know that there is a seamy side to our apotheosized prosperity.

When pension order No. 78, after a year and a half of anomalous existence, was made into law, some may have supposed that it disposed of the question of old-age pensions for veterans. By no means. A "vigorous effort" is to be made at the coming session, under the leadership of Senator Porter J. McCumber of North Dakota, to pass the "general service pension bill under material limitations." The "limitations," however, are not the features of the bill to arrest attention. The Ware-Roosevelt edict gave every veteran of 62 the one-half disability pension of \$6 per month, whether he proved such disability or not. Senator McCumber would make this \$12 a month. The order gave veterans of 70 the full disability pension of \$12 a month. Senator McCumber would make this \$15, with an increase of \$20 at the age of 75 years. Estimates of the additional cost of new pension rules have not been so accurate in the past as to inspire great confidence, but it is safe to predict a large bill from the fact that over half the pensions now

paid are at rates of \$10 per month or below. If Congress decides to discontinue entirely the sifting process as between deserving and undeserving Civil War veterans, there will remain the consoling consideration that perjury will be unnecessary when in order to obtain the new rate of pension no evidence will be required except an honorable discharge.

Simplified spelling was likened by some one to a vigorous tree which, beginning as a hardly noticeable shoot, was destined to spread its branches gradually until a whole nation should be comforted by its shade. In the climate of Washington, however, it has proved only a tender annual. Planted in the rather arid soil of the *Congressional Record*, with all the care of most competent gardeners, it did blossom once on December 4, when such verbal posies as "a thoro-going child-labor law" and "repeatedly past legislation" could be gathered by any passer-by. But this efflorescence was its last. It wilted even while it bloomed. In all seriousness the outcome of the spelling controversy should give satisfaction. The threatened squabble was avoided. Congress acted with promptness and dignity, and without a trace of partisanship. The President, meanwhile, has realized, what he might have perceived before he touched a pen to his order of last summer, that reformed spelling would not receive unanimous acceptance, and that a double standard in the Government Printing Office would be both ridiculous and vexatious.

"The Episcopal Church has turned out its last heretic." That has been a common remark among clergymen and others, since the deposition of Dr. A. S. Crapsey, and it is borne out by the extraordinary action of the diocese of Southern Ohio, last week, in the case of the Rev. George C. Cox. That clergyman had publicly announced himself a sympathizer with Dr. Crapsey and a sharer of his views, as well as the holder of others equally revolutionary, and he had asked the judgment of his ecclesiastical superiors. They resolved that, on the face of his own statements, he was "presentable for trial," but then proceeded to record the decision that, "having regard for the highest interests of the Church," they would recommend no action. The inference is unmistakable. In casting out Dr. Crapsey, the Episcopal Church exhausted itself, so to speak, straining the loyalty of many of its clergy and members to the breaking-point, and is capable of no more such efforts. In this light, Dr. Crapsey may have won for his brother clergymen the authorized liberty which was denied himself. The Rev. Mr. Cox can, of course, remain in the church with per-

fect honor and good conscience, after his manly avowals, and their condoning by his diocese; and as soon as such actions become widespread, a new rule will be practically established and troubled consciences made easy.

Chancellor E. B. Andrews of the University of Nebraska is the latest student of philanthropic problems to join in that criticism of the Salvation Army which began publicly at the last National Conference of Charities. "The Army's methods," he says in an open letter, "are vicious and pauperizing, and are calculated to make your so-called relief work a plague." He also censures the Army for its failure to make a satisfactory statement of the disposition of its funds, or to submit its accounts to the inspection of any outside committee. Here are two distinct lines of criticism. That much of the Salvation Army's activity is efficient and praiseworthy, critics would probably concede. Its industrial homes, "rescue work," and farm colonies appear to embody the "self-help" principle quite as well as most private charities, and better than many. But an organization which appeals for and receives wide public support ought to be conducted on the soundest principles. It may be recalled now that a wealthy Englishman once offered to endow Gen. Booth's work with a large sum of money on condition of the late Thomas H. Huxley's approval of methods, but this approval was withheld for much the same reasons that Dr. Andrews and others are now advancing in this country.

No Englishman could be more welcome as Ambassador to this country than James Bryce, for no Englishman has a similar understanding of our institutions, and the problems which this nation is trying to solve. None of his countrymen has performed a more valuable service for the United States than Mr. Bryce in writing "The American Commonwealth." Moreover, Mr. Bryce has an extensive acquaintance among American public men of both parties. He could take up his duties with a clearer comprehension of the elements of our political life than most Americans themselves possess. Aside from all this, on the personal side Mr. Bryce's appointment would be most popular. We can well see, however, that, tempting as the proposal must be, he would find it hard to give up his work as Chief Secretary for Ireland. As he has repeatedly stated in public of late, he is as devoted to the Gladstone Home Rule principle as any man in England, and he would naturally like to have a hand in the putting through of any Home Rule measure. But his present duties are extremely arduous, involving as they do constant trips to Ireland, long hours of

office work, and still longer hours at night in the Commons. Hence a change to the comparative quiet of the British embassy in Washington might appeal to him not a little, as would the opportunity of renewing his American friendships and continuing his American studies.

Neither James Bryce nor John Burns, the two members of the British Cabinet who have most to do with the question of the unemployed, favors unproductive or unnecessary labor schemes on the part of the Government. Mr. Bryce has declared, in reference to the Irish problem, that he will have no public works simply for the purpose of affording relief. That would be, in his view, a "most dangerous thing"; if there were any works of permanent value industrially needed, he might recommend them. But against the building of roads where no roads are necessary his face is set. John Burns takes much the same view. If he receives money, for instance, to reclaim land which is slipping into the sea, he will use it. As for starting projects for afforestation, or improving grades merely to afford employment, this is not in his mind. The various distress committees have difficult tasks before them to care for the unemployed. Not only is this an unusually trying winter, but the rapid deterioration of the unemployed makes it difficult to use them to advantage. After a man has been without work for some time he is incapable, according to the Rev. W. R. Wakefield, chairman of the London Central Unemployed Body, of earning more than 60 per cent. of what it costs to keep him until "after a period of reasonably good feeding and the discipline of labor." To do a \$10,000 job with unemployed labor, necessitates an expenditure of \$15,000; that is, large expense, with a comparatively small return, is the true characterization of relief work such as the Government is undertaking. But some families are permanently saved, and so become lasting assets.

The new Constitution for the Transvaal which was fully outlined last summer by Winston Churchill in the House of Commons, is summarized in the December number of *The World's Work*. The suffrage is conferred on all adult males (not colored natives) who have resided in the Transvaal for six months. Representation is based not on population, which would have assured complete Dutch predominance, but on the number of voters. For the first Assembly thirty-four seats have been apportioned to the Rand, with Johannesburg, these being assuredly English; six seats to Pretoria, which are regarded as doubtful, with the chances favoring the Dutch; and twenty-nine seats to the

rest of the country, which, possibly with one or two exceptions, will be likewise Dutch. The non-Afrikaner parties, according to Mr. Churchill's statement, include the Transvaal Progressive Association, which is the party of the great mine owners; the Responsible Government Association, which has advocated successfully the cause of autonomous government; the Transvaal Political Association, standing midway between the two; and the Labor Party. The balance of power will be held by "Het Volk," the Boer party, and Mr. Massingham's prediction that the first government would be organized by this Boer party, in coalition with liberal English elements, seems, according to the latest reports in the *London Times*, destined to prove true. The programme of "Het Volk," as published at Johannesburg on December 4, calls for the repatriation of the Chinese, extensive labor legislation, the establishment of a land bank, the construction of agricultural railways, a new education law establishing local control in the appointment of teachers and "the selection of the medium of instruction," and the recruiting of the civil service from among residents of South Africa. Evidently, the Boers have accepted the fact of the British conquest without reservation, and are preparing to assert themselves in ways parliamentary.

Following closely on the reported efforts to secure the consent of the great Powers to the neutralization of Denmark and Norway, comes news of a movement for welding together the three Scandinavian countries. A tri-national interparliamentary conference is proposed, to be held next summer at Copenhagen. The impetus to this step seems to have come from within the legislative bodies of the three countries, all of which will meet early in 1907. The plan is to have the Danish Rigsdag, the Swedish Riksdag, and the Norwegian Storting take simultaneous action on the proposition. If this be favorable, a committee of three members will be appointed by the popularly elected branches of each one of those three bodies. The committee will probably meet in the city of Gothenburg, on the Swedish west coast, which is equally accessible from all parts of the two peninsulas. The members of the larger conference would number about 400, which would mean a not inconsiderable expense. But the money, it is understood, may be appropriated by the three nations represented. It would be rashly optimistic to expect an immediate federation of the Scandinavian sister countries, but it is very likely that a standing interparliamentary committee may be established for the furtherance of a good understanding and coöperation between them.

HOW TO MAGNIFY THE STATES.

Secretary Root's speech at the meeting of the Pennsylvania Society in this city last week, appears to have been misunderstood. It seemed to be taken as a rampant plea for centralization of all power at Washington. Rightly read, we think it stands as a warning against such centralization, with an indication of the one way in which it may surely be prevented. Mr. Root was not exalting the Federal Government. That is not necessary; the drift is, as he said, all that way. He was rather pointing out the method of magnifying the States. Instead of holding up as the ideal an all-absorbing Government at Washington, riding over the governments of forty-six States, he called upon those States so to legislate, so to enforce the laws once made, that nobody would think of riding over their rights.

The only reason why a different view of the Secretary's speech is held by some must be that they studied only his premises and neglected his conclusion. He pictured in a few rapid strokes the tendencies which, as every one but the blind can see, are creating a strong national sentiment in this country, and binding the different parts of the land together. There is getting to be a clear *sensus communis* among the citizens of the United States regarding many matters of general concern. Respecting them, they wish that the voice of the people, as expressed in the laws, shall be harmonious and unmistakable. In some way, that powerful desire is going to translate itself into statute and action. That was the point which Secretary Root made emphatic; and upon it turned his urgent appeal, which really was, not for further congestion of power at Washington, but for its freer and more efficient exercise in the States. His exact words were:

I submit to your judgment, and I desire to press upon you, with all the earnestness I possess, that there is but one way in which the States of the Union can maintain their power and authority under the conditions which are now before us, and that way is by an awakening on the part of the States to a realization of their own duties to the country at large.

Now, as a matter of fact, such an awakening is visibly beginning in this country. Many influences are at work to bring the States into coöperation and a reasonable degree of unity, as regards important subjects of legislation. The movement is partly official. Such a step as the issue at Albany of bulletins of comparative legislation, has been imitated with good results in other States. In Wisconsin, particularly, the method has been useful, both in furnishing information and in guiding the drafting of laws. In Oregon, in Maryland, in Indiana, Rhode Island, and elsewhere, a similar practice has been started, with the aim of bringing about a sort of

tactic codification of the statute-books of various States, in those matters of law-making which interest them all. In addition, there are the volunteer and unofficial agencies which are working powerfully upon the several Legislatures to cause States that are backward in their divorce laws, or their child labor laws, to move forward abreast of enlightened sentiment. These signs of the times cannot be ignored by any one who keeps his eyes open; and the movement they represent ought to be quickened by Mr. Root's summons to the States to preserve their dignity and authority by wise and efficient laws, and so check "the tendency of the people of the country to seek relief through the national Government, and to press forward the movement for national control and the extinction of local control."

Efficiency in government will, in the long run, prevail over theories about government—though, of course, no government can be called efficient which does not consult and satisfy the wishes, and even prejudices, of the people as concerns its form and methods. If the majority of the citizens are convinced that public affairs should be conducted in a given way, it is not really efficient to try to conduct them in another. But there is no hard-and-fast rule. No absolute line can be drawn. On this whole question of centralization as opposed to local control, no wiser word has been uttered, even in women's clubs or leagues for political education, than that of John Stuart Mill in his essay "On Liberty":

I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming this difficulty [centralization], may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest centralization of information and diffusion of it from the centre.

In any case, Secretary Root was quite right in calling upon the States to magnify their function, as the surest way to retain it. Power clings to him who power exerts. If there still resides in State governments enough of the ancient virtue, enough of the constructive talent, the flexibility able to meet changing conditions with changed laws, and if these powers are put vigorously into play for the common weal, then no one need dread that they will be taken away.

PREVENTING LAND FRAUDS.

If the solution of the public land problem consisted merely in punishing all those who have violated the laws passed for regulation of the public domain, then the Roosevelt Administration might already be credited with astonishing progress toward that solution. It is doubt-

ful if ever before so many persons from such different stations in life and in so many different localities have been convicted within so short a time for the violation of Federal statutes which had previously been almost ignored. Secretary Hitchcock, in the face of political and personal pressure of every form, has been relentless in his pursuit of corrupt officials and corrupting outside operators; and the President has given loyal support to his work. As the Secretary summarized results in his report for this year, there have been 490 persons indicted for land frauds, 89 have been convicted, and 401 are under indictments still pending.

Naturally, when such wholesale rascality is exposed, the laws which have proved so easy to evade come in for attention. The land laws are bad because they facilitate fraud and deceit, and their shortcomings in this particular have already been widely noted; but they are also bad because they fail to make provision for the legitimate needs of the country. The peculiar interest of President Roosevelt's special message of Monday lies in its emphasis of this latter and less considered phase of the subject.

All over the West there have been conducted industries useful to the country at large, indispensable to the communities in which they are placed, honest in every relation of life—except that the land on which they operate has been virtually stolen. Timber-cutting, cattle-raising, coal-mining have been carried on under laws, or rather in violation of laws, which bore next to no relation to genuine requirements. As the President says with truth and force:

The present coal law, limiting the individual entry to 160 acres, puts a premium on fraud by making it impossible to develop certain types of coal fields and yet comply with the law. It is a scandal to maintain laws which sound well, but which make fraud the key without which great natural resources must remain closed.

What he says here of coal lands applies only in less degree to grazing and timber lands. Without employing a force of agents to make fictitious entries and then turn over their holdings to him, a man could not acquire enough acres of forest to make it profitable for him to equip a sawmill.

What was the result of a policy which would give a citizen no more land for mining coal than for growing cabbages? It did not stop the acquisition of great tracts of land or the supply of those products which required large areas. It did, however, develop in the Western country a thoroughly unhealthy sentiment regarding the public domain. To the already general conviction that there was no moral wrong in cheating the Government, was added a special contempt for this set of laws. Industries in which, for their own sake, the coun-

try took a genuine pride, were paradoxically kept out of the hands of men with scruples.

So long as these underlying conditions exist, it is vain to suppose that any series of prosecutions, even if the whole Senate should be put behind the bars, will scare away the land-thieves once for all. The laws must be liberalized in one direction as they are made stricter in another. The Timber and Stone act, the Desert Land act, and the commutation clause of the Homestead act, are suggested by the President for repeal or modification, as they were by his Land Laws Commission of last year. These suggestions are not new. President Cleveland wrote in his second annual message just twenty years ago:

I recommend the repeal of the preëmption and timber culture acts, and that the homestead laws be so amended as to better secure compliance with their requirements of residence, improvement, and cultivation. . . . I also recommend the repeal of the desert-land laws unless it shall be the pleasure of the Congress to so amend these laws as to render them less liable to abuses.

But while the need for amending the land laws has long been perfectly well known, this may be a propitious time for President Roosevelt to urge the reform. The prosecutions of the last two years have interested Eastern communities which scarcely realized before that there were any such things as land laws and the public domain. Let another period of apathy ensue, with the laws in their present condition, and the old frauds are certain to reappear. On the other hand, a carefully worked out system of leasing range land, selling standing timber without selling the land, and otherwise permitting effective use of natural resources, will help toward honest administration of the much-abused Land Office.

"COAL FAMINE" AND THE RAILWAYS.

The extraordinary reports which are coming from the Northwest regarding the failure of railways to supply coal, are for the most part a piece with this autumn's whole chapter of incidents in the transportation system. The country hears much of a "fuel famine," because of the actual suffering. It has perhaps heard less of the failure of railways in the Northwest to carry wheat to market fast enough to relieve the country storehouses; yet for weeks the wheat markets have been agog with accounts of great piles of grain actually rotting on the ground because there was neither elevator room nor transportation facilities. In less degree, every producing and distributing industry is affected similarly. Railway men are well aware that the unusual number of railway accidents this season results

directly from the crowding of tracks with freight trains.

The railway manager answers complaints by declaring that existing facilities are overstrained by unprecedentedly large harvests and by the equally unparalleled volume of general trade. President Stickney of the Great Western defends the companies, on the ground that, "if the business were sensibly and properly distributed over the entire year instead of being massed in a few months," there need be no trouble. In such respects, Mr. Stickney proceeded, "the traffic situation on the railroads is like the traction problem in New York." No doubt, the subway and elevated trains would be less crowded if the majority of people did not insist on going downtown between 8 and 9 A. M., and on returning between 5 and 6 P. M.; and no doubt, also, railway freight facilities would be more nearly equal to demand if dealers and consumers would buy their coal in midsummer, and their grain and cotton five or six months after harvest. But people will not do this, for reasons satisfactory to themselves; and so long as they will not, the railways must provide for the actual public requirements.

James J. Hill of the Great Northern was lately moved by the existing situation to extremely pessimistic utterances. He went so far as to declare that the inability of the railways to handle a season's freight signifies commercial paralysis, "which, continued, means slow commercial death." He admitted that the trouble arises largely from actual lack of tracks, arguing that, while business has increased 110 per cent. in the past ten years, railway mileage has increased only 20 per cent.; but he also declared that to build the 115,000 or more miles of track needed at once to take care of the country's business "would cost as much as the Civil War." "There is not," Mr. Hill concluded, "money enough or rails enough in the world to do this thing." Other railway officers have taken issue with Mr. Hill, and have argued, with President Harahan of the Illinois Central, that the freight congestion "is not a question of tracks, but of cars and locomotives and prompt handling by the carriers."

Thus the doctors disagree. But the truth undoubtedly is that all of these causes contribute. In the famous "Pittsburgh blockade" of November, 1902, when failure of the Pennsylvania Railroad to move the freight offered it, caused actual closing of some important iron works, the chief trouble was lack of motive power; but tracks were also inadequate. In the "wheat blockade" of December, 1897, when exporters with "rush orders" from famine-stricken Europe could not get a chance at the great store of wheat in our Northwest, lack of cars was responsible, the real

shortage on Western roads being aggravated by the habit, among Eastern lines, of keeping in use and not returning the cars sent from the grain district.

The problem is anything but simple. As for the "coal famine," there is evidence of bad management. Where the nature and magnitude of the requirement were known, failure so complete is inexcusable. The railway managers should have looked more clearly into the future. The broader question of transportation cannot, however, be so readily dealt with. A great part of the responsibility for the condition of which Mr. Hill complained—slow extension of railway trackage in response to expansion of business—rests upon the railways themselves, through their deliberate choice. The increase in railway mileage in this country, during the past half-dozen years of unprecedented trade activity, has been smaller, both in actual figures and in its ratio to the previous total, than in any corresponding period since the Civil War, excepting times of actual adversity. The well-known cause is the prevention of the old-fashioned competitive railway-building. It may well be asked whether this process has not gone too far; whether, in endeavoring to avoid the "rate wars" and the "speculative paralleling" of a generation ago, the companies have not deprived the country of facilities to which it was entitled. Mr. Harriman is responsible for the assertion that we have railways enough already. If he means trackage enough, he is mistaken, as is sufficiently shown by Monday's announcement of the Chicago, Milwaukee and St. Paul that it is about to raise \$100,000,000 to strike through the far Northwest to the Pacific Coast. The difficulty is complicated by the already overstrained demand for capital. But for that, too, the railway managers are at least in part to blame. How much of the credit of the companies and the resources of investors has been locked up in securities issued to buy up other lines, at the extravagant prices reached in the climax of a Wall Street "boom"?

THE GERMAN ELECTIONS.

The German Government enters the electoral campaign for the new Reichstag with no inconsiderable advantages. Its bold and unexpected defiance of the Centre and dissolution of the Reichstag have impressed the public, and the appeal to patriotism to uphold the honor of the flag is sure to rally some following. Again, by directing the attack upon the Centre, the Government leaders are able to confuse the issues. Were the question merely whether the colonial policy should or should not be sustained, the chances are that the Government would be facing a severe censure.

But the cry, "Down with the Clericals!" now raised by the Government, has already caught the Liberals, who have rightly seen in the past alliance of the Clericalist Centre with the Government a positive menace to political progress in the Empire. The Clerical, that is, Catholic influence has been dominant; in Prussia it was recently strong enough to obtain a reactionary school law. Something of the same spirit of revolt against the alliance of Church and State which is simultaneously making itself felt in England, Spain, France, and even in Italy, may therefore have to be reckoned with in the contest now being waged.

Already three of the minor Radical groups—the German Volkspartei, the Radical Volkspartei, and the Radical Union—have issued a joint manifesto calling attention to the unhappy influence which the Centre has exercised upon public life by reason of its numerical superiority. Naturally, the Clericals retort that the attacks are not upon them, but upon the Catholic Church, and they therefore call upon the faithful to rally to its defence. Just what effect this will have on the Socialist vote, if any, is the puzzle of the campaign. Count Ballestrem, the aged presiding officer of the Reichstag, who has declined to stand for reelection, is quoted as saying jokingly that his place will be filled by Herr Singer, the Social-Democratic leader. This may be one of the true words spoken in jest. Certain it is that the religious issue will affect the middle classes, but whether it will stir the masses from which the Social-Democrats have recruited their three million voters, remains to be seen. Here the enormous rise in the price of meat, which has made it a luxury beyond the means of thousands upon thousands of people, is more likely to be a potent factor. Indeed, the interim elections have afforded no ground for belief that the extraordinary growth of the party of Bebel has really experienced any check. Moreover, the widely expressed popular sympathy with the Russian struggle for liberty is not without significance.

None the less, it is not at all likely that the election will actually return a Socialistic majority in the next Reichstag, and thus precipitate that dread contest upon the outcome of which, many persons think, will depend the future of Parliamentary government in Germany. The antiquated electoral laws work great hardships upon the Social-Democrats, which in Government circles is a weighty reason for the refusal to alter them. Should the Centre, however, lose some seats and the Socialists gain them, the latter might have the largest delegation in the Reichstag. The Clerical representation in the dissolved house was 102, while the Social-Democrats numbered 79 and the Conserva-

tives 72. The National Liberals controlled 52 seats, while the Radicals of all types had dwindled to 36 members, lacking coherence and leadership. It is this group, as well as the National Liberals, which hopes to gain at the expense of both the Centre and the Conservatives. The Government is openly leaning in the direction of the National Liberals; but, since Conservatives and Liberals totalled but 124 in the last Reichstag, it is not quite clear where Von Bülow expects to get the other 75 votes he needs for a working majority. Possibly, he looks to see the Clericals so severely rebuked as to make their diminished numbers reënter the Reichstag in a wholly submissive frame of mind and ready to do the Chancellor's will.

That the colonial errors, cruelties, and extravagances will play a great part in the campaign, remains true. For these the Centre has to share a good deal of the responsibility, since its influence upon the conduct of the Colonial Bureau has been particularly unhappy. Germany is a nation of able and progressive business men, and as such it has not found much satisfaction in the colonial balance sheet submitted by the new director, Herr Dernburg, asserting that \$250,000,000, or a "milliard of marks," represents the German capital actually invested in the colonies. Careful examination has shown that \$75,000,000 would be a more accurate figure, which is a small sum, indeed, when one considers the hundred millions of marks which have been spent in the course of the Southwest African war alone. This poor showing is not wholly counterbalanced by Herr Dernburg's promise to prosecute all guilty officials and put the whole colonial administration on a business basis, just as he has already terminated the monopolies of the Wörmann Steamship Line and the firm of Tippelskirch, the army contractors. The glory of colonial acquisition has faded only a little less quickly than that enthusiasm which marked the American expansion in the Philippines. There, as here, the realization that colonies are a source of grave military weakness has become widespread. And when a people in the midst of great national prosperity is crying out for less taxation, cheaper food, more liberal laws, the decrease of exhausting army and navy burdens, and social reforms of every kind, the call to waste more treasure and more lives in far distant lands ought to need something more than an appeal to patriotism to make it effective, or even palatable.

ITALIANS IN PARIS.

The course of lectures just given by Guglielmo Ferrero at the Collège de France, had a prodigious success, both academic and social. In addition to the

usual frequenters of the room, public men and many well-known women flocked to applaud the Italian *conférencier*. His lecture became almost a fashionable event: the Rue Saint-Jacques was blocked with carriages and automobiles. The course was also given an international significance, educationally. At Ferrero's fifth lecture, a telegram reached him from the Italian Minister of Public Instruction, congratulating him in the name of his country. At his last, the French Minister of Public Instruction was present, to bestow upon him the cross of the Legion of Honor. And M. Levasseur, in bidding farewell to Ferrero, deftly spoke up for the needs of the college, while complimenting its guest, by expressing the hope that, on his return, he would find a lecture-room capacious enough to contain his admirers.

Ferrero is but the latest of talented and learned Italians to make a reputation at Paris. His countryman, Pellegrino Rossi, early in the last century, lectured on political economy in the Collège de France. And further back, of course, the names of Italian professors, philosophers, artists, physicians, who had won a welcome and achieved fame in France, would make a long list. The notable thing is that this intellectual comity has been kept up so continuously. A strong impulse towards an *entente* between the enlightened and aspiring men of France and Italy was naturally given in the days of the *risorgimento*, when so much was hoped and so much was had from France. But the warm and easy friendship had gone on to our own day. Italy sends her strong-armed laborers to all parts of the world; but it is to France that the gravitation of culture draws her educated and studious sons. Their French sympathies lie near the surface. Georges Claretie writes of calling upon Lombroso at Turin one day, to find him in the midst of a family gathering. But Lombroso welcomed him: "You are a Frenchman; hence you belong to the family!"

To return to Ferrero's lectures—they have to do with Roman history. In studying the age of Augustus, he has displayed an engaging ability to reconstruct the ancient time, to correct errors, to revivify, to make real. In all this he has had no such iconoclastic work to do as the great German pioneers in giving the world the true history of Rome; his labor has been, rather, minute correction, the placing of details in a new and juster light. His method, he frankly states, he derived from Gaston Boissier, whom he refers to as his teacher. In one of his Paris *conférences*, for example, he took up the question of the dying Augustus: "Have I played well the comedy of life?" This has been thought of as the essence of cynicism; but Ferrero, by a wide collation of the

evidence showing the contemporary habit of speaking of life in theatrical terms, gave the phrase quite another turn.

It is a favorite thesis of his that modern reproduction of historic conditions enables us to penetrate to their real meaning more successfully than our predecessors in the teaching of history. Thus he contends that our age is best fitted to understand the Augustan epoch. Now, as then, we see empires of vast extent, with freedom of trade prevailing at least within the borders of each, and peace, if not forever assured, at any rate the rule and the expectation. It is for such reasons, asserts Signor Ferrero, that we feel on good terms with Augustus, and can understand him better than we can Charlemagne; so that it is possible to-day to write a history of Augustus that will set right the mistaken ideas of the past. He faces fully the criticism that will be made:

I know very well that the contradiction between my history and tradition will awaken in many minds a sort of hostility. They will ask if it is possible that the whole world has been deceived for twenty centuries, and that we had to wait till 1906 to know the exact truth about the Roman Empire of the year 6. But these twenty centuries really are reduced, in so far as it is a question of comprehending Augustus, to a hundred years, or a little more. As Augustus was the last representative of a world that was disappearing, his figure very quickly became obscure. Tacitus and Suetonius already saw him through the first mists of the new mentality which was, for so many centuries, to deprive mankind of the delightful spectacle of the classic and pagan world. Speedily the mist thickened, until Augustus became only a phantom. But to-day, the full sunlight has returned. I do not profess to be a magician, nor to have a miraculous power of intuition. If I have been able to rectify many errors, it is only because I have been the first one to observe closely, at a moment when it has at last become possible to see and to understand.

In swinging open her academic doors for such suggestive teachers, France takes toll of the nations. She has so much to give because she so freely receives. Such courses as that of Ferrero—and Fogazzaro is soon to follow him—show that free trade in intellect still rules in Paris.

FOSTERING MUSICAL GENIUS.

The complications which have arisen in Washington in regard to the Copyright bill are likely to exclude composers of music from the benefits of the measure. At the same time, it must be admitted that there is no urgent need of legal protection of American composers, so far as prolongation of their copyrights is concerned. There are only three or four American com-

posers whose works are likely to be in the market more than four decades.

The law which, after years of wrangling, was recently passed by the British Parliament, is less in behalf of composers than of publishers. It was intended primarily to put a stop to the selling, for a few pennies, of pirated editions of sheet music by curb hawkers. This object, according to recent reports, has already been practically accomplished. But now the composers are lifting up their voices to point out how little, after all, the new law has done to help them—that is, those of them who pursue serious aims. Sir Charles Stanford, at a dinner given to T. P. O'Connor, who engineered the Copyright bill, intimated that what had been done was to secure the safety of "those works which produce the quickest returns and the largest profits"; and he bluntly intimated that, in return for this benefit, the publishers ought to feel in duty bound to devote a portion of their increased profits to the publishing of music which appeals to a smaller but an earnest circle of music-lovers. He had in mind symphonies, concertos, and other orchestral works, chamber music, sonatas for various instruments, important pianoforte music, and classical songs. By way of emphasizing English shortcomings, he referred to the publisher Belaïeff, who has greatly helped the best Russian music to make its way over two continents.

The publishers, as was to be expected, took up the gauntlet thus flung down. The Novellos, in their monthly periodical, the *Musical Times*, explain that this Belaïeff was an amateur music publisher—a millionaire, in fact, who chose to spend his money for the advancement of his country's music. To make sure that his good work might be continued after his death, he bequeathed a large sum to the Russian composers, Glazounoff, Liadoff, and Rimsky-Korsakoff, to be used in carrying out his propaganda. This music publishing *à la Russe* is therefore quite an exceptional thing. Would Professor Stanford suggest that publishers generally should run their business on these lines? Is there any particular duty imposed upon the publisher exclusively to pull the chestnuts out of the fire which is kindled by the student and fed on manuscripts?

William Boosey, the managing director of Chappell & Co., has also expressed his opinion on the situation in vigorous terms. He thinks the future of young English musicians is "appallingly dark," and he puts the blame for this on the public, the teachers, and the composers themselves. The recent popularity of orchestral music has killed the taste for chamber music; hence that particular market is spoiled, while the demand for orchestral scores is, of course, very limited. Then there are the professors

who, for the most part, "insist upon the students writing in certain forms that have no commercial value." Still another firm, the Messrs. Metzler, have declared that "not one song in a hundred sent in to them is worth a second thought, either as regards its artistic or market value"; yet, they add, "we have some magnificent songs, but can't sell them."

Sir Charles Stanford does not deny that the British publishers of music have done much for the furtherance of the art to which they minister. They have liberally encouraged oratorio and church music; they have produced cheap editions of classical master-works; and they have generously supported the schools of music. But the complaint is that the principal personage, the composer of merit or promise, has been overlooked. For him, little or nothing is done; the battle of life is, for him, as hard as ever. The publishers lack confidence—they do not look ahead, as some of the book publishers do, taking their chances. How, Sir Charles asks, would English literature be rated in Europe if its staple were six-shilling novels, while the works of Tennyson, Browning, Darwin, Huxley, Lecky, and Green remained in manuscript? Yet that is the musical situation in England to-day. If Schubert were alive, and living in England, and sent in his "Erlking," the publishers would return it with the comment that its difficult accompaniment would interfere with its sale.

Possibly, the British publishers, now that the new copyright law has restored to them due profits, will heed these words of reproach. If they do not, the salvation of the English composer must be sought in the person of some British Belaïeff. Indubitably, the munificence of that Mæcenas has done a great deal to make living Russian composers known in Europe and America. The thought suggests itself that perhaps the Belaïeff fund is behind the astonishingly numerous concerts of the Russian Symphony Society in New York. The American composer can only pray for a similar patron. On the whole, however, it cannot be said that the latter has very serious cause for complaint so far as the publishers are concerned. The catalogues of Ditson, Schirmer, Breitkopf & Härtel, Arthur P. Schmidt, the John Church Company, and others, teem with American compositions; and if they are mostly short pieces and songs, it is because the public taste is turning away from sonatas and symphonies; yet when a MacDowell writes a sonata, or a Paine a symphony, the publisher is glad to get it. Publishers, no doubt, have their faults; yet, in surveying the whole situation, one cannot but feel that Sir Charles is barking up the wrong tree. If musical genius is insufficiently fostered, the fault lies less with the publishers than with the pub-

lic, the conductors, the singers, the players, and the critics, most of whom are apt to ignore what is new unless it is also sensational.

HERESY TRIALS IN ENGLAND.

The condemnation of the Rev. Dr. Algonson S. Crapsey for heresy suggests a comparison with the very different fortune which would probably have befallen him if he had been a clergyman of the Established Church in England. There his recent utterances, which have led to his dismissal here, would have caused little comment, and probably no attempt would have been made to discipline him. This comes from the important difference between an established and an independent church. In this country any church which has a creed can discipline its clergy for heresy with no fear of any superior authority which can overrule its action. But in England every clergyman of the Established Church has the right of appeal from the judgment of an ecclesiastical tribunal to the courts of law, especially to the Judicial Committee of the Privy Council, which is the highest court of appeal in the kingdom. This body has, in several important cases, reversed the judgment of the ecclesiastical courts, and thus established precedents which give the clergy of the English Church a liberty of expressing opinions on matters of doctrine which would be impossible or dangerous in any orthodox church in this country.

The first case of this nature which came before the Judicial Committee on appeal is that of Gorham vs. the Bishop of Exeter. The Rev. George Gorham, some time fellow of Queen's College, Cambridge, who had been ordained as priest in 1812, was in 1846 offered a living in the gift of the Crown by the Lord Chancellor. The Bishop of Exeter, to whose diocese the living belonged, refused his assent to the appointment on the ground that Mr. Gorham was "of unsound doctrine concerning that great and fundamental point, the efficacy of the Sacrament of Baptism, . . . contrary to the plain teachings of the Church of England in her Articles and Liturgy." The case came before the Court of Arches, in which the Bishop was sustained. Mr. Gorham at once appealed to the Judicial Committee, which heard the case at a meeting at which Lord Campbell was present, while the Archbishops of Canterbury and York and the Bishop of London assisted "by special command of her Majesty the Queen." The judgment, from which one of the Council dissented, declared that "the Lord Bishop of Exeter has not shown sufficient cause why he did not institute Mr. Gorham to the vicarage." This judgment was approved and ordered to be "duly and punctually observed, complied with, and carried into execution" by an Order in Council passed by the Queen, Prince Albert, the Lord Chamberlain, Lord John Russell, Lord Palmerston, and others. The case was afterwards brought before the Court of Queen's Bench by the Bishop, who undertook to question the authority of the Queen in Council, and again in the Courts of Exchequer and Common Pleas, but without success.

The judgment of the Judicial Committee

contains an elaborate historical account of the doctrines held by the Church on the subject of baptism, leading to the conclusion that great latitude has here always prevailed and been permitted. It says:

It appears that opinions, which we cannot in any important particular distinguish from those entertained by Mr. Gorham, have been propounded and maintained, without censure or reproach, by many eminent prelates and divines. . . . We do not affirm that the doctrines and opinions of Jewel, Hooker, Usher, Jeremy Taylor, Whitgift, Pearson, Carlton, Prideaux, and many others, can be received as evidence of the doctrine of the Church of England; but their conduct, unblamed and unquestioned as it was, proves, at least, the liberty which has been allowed of maintaining such doctrine.

The judgment also contains this passage, with reference to the burial service of the Church:

In this service there are absolute expressions implying positive assertions; yet it is admitted that they cannot be literally true in all cases, but must be construed in a qualified or charitable sense. . . . It seems manifest that devotional expressions, involving assertions, must not, as of course, be taken to bear an absolute and unconditional sense.

A much more important case was the process against two of the writers of the celebrated "Essays and Reviews," published in 1860 by seven Oxford theologians, among whom were the late Archbishop Temple (the editor of the volume), Benjamin Jowett, and Mark Pattison. This volume roused a tempest in Oxford and in a great part of the Church, which it is hard to understand now. The views on various religious questions therein expressed though they would not cause much excitement now in England, were bold and radical at that day. The book was severely handled, even by some of the more conservative Unitarians in this country. The *North American Review*, then edited by Dr. Andrew P. Peabody, published a review of it under the title, "The Oxford Clergymen's Attack on Christianity," written by Professor Bowen of Harvard College. In this article the essays of Dr. Temple and Professor Jowett were selected for the severest criticism. It was felt in ecclesiastical circles in England that some serious action must be taken at once to suppress this rebellious spirit in the very heart of the Church, in Oxford itself. Two of the seven writers, Professor Rowland Williams and the Rev. H. B. Wilson, were at once summoned before the Court of Arches, and long passages were quoted from their essays which were believed to contain heretical and forbidden doctrines. Of the articles of charge several were rejected wholly or partially, and only three in each case were included in the judgment. Dr. Williams was charged with quoting with approval a passage from Chevalier Bunsen's "Gott in der Geschichte" (which he was reviewing), referring to the Bible as "an expression of devout reason, and therefore to be read with freedom."

Dr. Williams was further charged with using the following language:

Why may not justification by faith have meant the peace of mind or sense of Divine approval which comes of trust in a righteous God, rather than a fiction of merit by transfer?

The prosecutor held that all this was inconsistent with the articles of religion, which "impose the

obligation of acknowledging that the Bible, in matters essential to salvation, is the written Word of God; that it was written by the interposition of the Almighty, supernaturally brought to operate." Mr. Wilson was charged with declaring and affirming in effect that "the Scriptures of the Old and New Testament were not written under the inspiration of the Holy Spirit." He was also accused of declaring that "after this life and at the end of the existing order of things on this earth there will be no judgment of God, awarding to those men whom he shall then approve everlasting life or eternal happiness, and to those men whom he shall then condemn everlasting death or eternal misery," whereas the Creed of St. Athanasius contains the following words: "And they that have done good shall go into life everlasting, and they that have done evil into everlasting fire."

The Court of Arches condemned both of the accused clergymen, and the Dean of Arches sentenced each of them to suspension for one year. Both appealed without delay to the Queen in Council. The Judicial Committee revised the cases with great care, and after more than a year, the Lord Chancellor gave judgment in February, 1864, rejecting the articles of charge and reversing the sentences imposed by the Court of Arches, and adding the comforting words:

Inasmuch as the Appellants have been obliged to come to this Court, their Lordships think it right that they should have the costs of this Appeal.

Besides the Lord Chancellor and three other learned lords, there were present at the hearing the Archbishops of Canterbury and York and the Bishop of London. The two Archbishops dissented from the judgment on two of the six articles of charge. In the official report of this case, the following points are mentioned (among others) as decided or affirmed by the judgment:

- (1.) It is not penal in a clergyman to speak of "merit by transfer" as a fiction.
- (2.) It is not penal in a clergyman to deny the proposition that every part of every book of Holy Scripture was written under the inspiration of the Holy Spirit, and is the Word of God, that proposition not being found in the Articles of Formularies of the Church.
- (3.) There is not found in the three Creeds, the Absolution and the Burial and Communion Services, any such distinct declaration as to require the Court to condemn as penal the expression of hope by a clergyman that even the ultimate pardon of the wicked who are condemned on the day of judgment may be consistent with the will of Almighty God.

These decisions are now a part of the law of England. They naturally put a stop to the plan of next prosecuting Professor Jowett for the heretical doctrines of his essay on the Interpretation of Scripture, which our Unitarian reviewer found so dangerous. His enemies persecuted him for a time by curtailing his emoluments at Oxford, which did him little harm. He was soon made Master of Balliol, and afterwards Vice-Chancellor of the University. He always remained a friend of the most distinguished men in England, in both Church and State, and when he died, the Archbishop of Canterbury, his former companion in heresy, officiated at his funeral.

In 1863, while the case against the "Essays and Reviews" was in court, but before the Lord Chancellor had given his judgment, the Church was again convulsed by the

prosecution of Bishop Colenso at the Cape of Good Hope. Colenso had published a book on the Epistle to the Romans, and another on the Pentateuch and the Book of Joshua, both of which were thought by many to contain heretical and dangerous doctrines. Colenso was Bishop of Natal, and he had been, by letters patent of the Crown, made subject and subordinate to the Metropolitan Bishop of Cape Town, Dr. Gray. In July, 1863, when Colenso was in England, he was summoned to appear before the Bishop of Cape Town "to answer certain charges of false, strange, and erroneous doctrine and teaching," based on the two books above mentioned. In October, after consulting counsel in London, Colenso wrote a formal letter to Dr. Gray, denying the latter's jurisdiction over him, protesting against the proceedings against him, and declaring his intention of resisting the execution of any adverse judgment which might be delivered in his case. He positively refused to appear in person before the Bishop's court, but authorized his attorney to represent him, "not to argue, but simply to protest." To avoid delay, he admitted that he published the passages in question, but denied that this act constituted any offence against the laws of the Church. Dr. Gray, with two other bishops, then held a court and listened to the charges against Colenso, for whom no defence was made. He had probably learned more about the law of the case in London than was suspected at Cape Town. The published proceedings of the trial fill 405 pages. Judgment was given against Colenso; and he was sentenced to be deposed from his office as bishop, and prohibited from the exercise of any divine office in the province of Cape Town. His attorney then protested against the legality of the proceedings and the validity of the judgment, and at the same time gave formal notice that "the Bishop of Natal" would appeal from the judgment and resist its execution by all lawful means. The final result of the proceedings was a decision by the Judicial Committee of the Council that the Bishop of Cape Town had not jurisdiction, and that his judgment against Colenso was "null and void in law."

Colenso returned from England to Natal in 1865, and was warmly welcomed there by his friends. He remained there as bishop until his death in 1883, molested by petty annoyances from Dr. Gray until the death of the latter in 1872. In 1874 he revisited England, where he was warmly welcomed, though some of the unreconciled authorities of the Church still treated him as a proscribed heretic. The Bishop of London ordered that he should not be allowed to preach in his diocese, whereupon the Dean of Westminster invited him to preach in the Abbey whenever he pleased. This invitation was, however, declined by Colenso, in the interests of peace. He was invited to preach in Carfax Church in Oxford, but the Bishop of Oxford forbade this, and Colenso's sermon was read to the congregation by the rector. In the afternoon he preached in the chapel of Balliol College, by invitation of Jowett (then Master of Balliol), whose guest he was at the time. He returned to Natal the same year, where he was troubled by no more persecutions, and devoted himself chiefly to the interests of the native races of South Africa.

It may be thought that the intervention of the courts of law in matters of religion, and the right of a legal tribunal to decide what shall be called heresy in an official of the Church, deprive the Church of one of its natural rights, and make it a mere servant of the common law. But where the Church is established as a part of the State, it is inevitable that the highest judicial court shall be the final interpreter of the law which applies to the action of the Church when it undertakes to impose pains and penalties upon its officers. And in fact such controversies as I have described serve a good purpose in clearing the air. We hear little or nothing now in England of such prosecutions for heresy as that of the "Essays and Reviews." The Church of England as a whole appears to have acquiesced in the interpretation of the law as it was settled forty years ago. The single sentence quoted above from one of the Lord Chancellor's decisions:—"It seems manifest that devotional expressions, involving assertions, must not, as of course, be taken to bear an absolute and unconditional sense"—covers a large part of what ecclesiastical tribunals would call heresy if there were no authority to revise their action. Where there is no such authority, as in this country, it becomes a most important and necessary duty of the leaders in our orthodox churches to recognize the cases in which the literal meaning of "devotional expressions involving assertions" has become so far outgrown through the advance of knowledge that it is no longer accepted by large and increasing numbers of those who use them.

BOOK NOTES FROM PARIS.

PARIS, December 5.

Among the more notable of recent books is a volume from Albert Lumbruso, the Italian collector, who publishes in French some new letters, medical notes, and other curious "Souvenirs de Maupassant" of the last unhappy period. The first volume of Zola's correspondence—for the year 1859, summing up his youth—is to appear at the end of January. It was a year of the peculiarly severe Grub Street of a poor young man, with only his labor and courage to conquer the world. With the announcement of this new book, Madame Zola has also taken definite steps to give to the two illegitimate children of her husband the right to bear his name; her own union had been sterile, and at the funeral she placed the son at the head of the mourners. As the children are doubly orphans, she has adopted them, and is providing for their higher education. Léo Claretie publishes the third volume (18th century) of his "Histoire de la Littérature Française (900-1900)"; it is readable, and for the general reader. Professor Haumont of Paris has a very complete historical and critical volume on "Ivan Tourguénief." A book that will interest many is the "Chansons de la vieille France," as gathered and sung by Madame Yvette Guilbert, with full music and illustrations.

Leon Frapié, the unknown city functionary of Paris who won the Goncourt prize, publishes another of his dolorous, minutely

realistic novels of the other half of French society, "La Proscrite." A novel which is creating talk on account of its acrid anti-and pro-Semitism at one and the same time is "La Juive," signed Enacryos, a name which thinly disguises those Belgian brothers Boex, who habitually write under the one signature, J. H. Rosny; their style has lost nothing of the forced violence which brought them into the Goncourt Academy, and their matter shows the same harsh eagerness to unveil souls.

The few love-letters of Gambetta, which have just been published, are but a small part of the all but daily correspondence which for ten years, absent or present, he carried on with his Egeria, the late Madame Léonie Léon. As he confided in her and consulted her about every action of his life, from health and amusement to the gravest affairs of state, with copious outpourings about the persons surrounding him, the importance of such a series to the history of the Third French Republic may be imagined. There are too many persons concerned still living for a publication of such letters to be made as they stand. The Gambetta family, on the death of Madame Léon a few weeks ago, at once took legal measures to prevent any use, without their consent, of the three thousand or more letters known to have been in her possession. The letters already printed are from copies made long ago, which had come into the possession of the ex-deputy, Francis Laur; they may best be compared as literature to Mirabeau's Rousseau-ish letters to his Sophie. The fate of the mass of the letters is doubtful. Madame Léon had drifted far from the free-thinking views which allowed her long *liaison* with Gambetta; and she has left all her papers to a Benedictine nun. It is expected that Government will make a pretext of Gambetta having possibly been in possession of public papers to lay hands on the entire correspondence—if it still exists. M. Hanotaux publishes the third volume of his important "Histoire de la France Contemporaine," concluding the Presidency of MacMahon from the Constitution of 1875 to the fatal 16th of May, when the Conservative Republic forever died in France; these were years very little preceding M. Hanotaux's own entrance into the Foreign Office at the beginning of his political career, which with the Radical Socialist triumph now seems definitively terminated.

A literary movement of young men, which will bear watching, is responsible for four Neo-Monarchist books. The leader, Charles Maurras, takes up the cudgels in a book on "Le Dilemme de Marc Sangnier"—an essay on religious democracy. Marc Sangnier's dilemma, which is worth meditating outside of France, runs: "On a mind without superstition sooner or later an imperious dilemma imposes itself—either Monarchic Positivism or Social Christianity." A still more interesting volume is by Louis Dimler, "the first Newmanist of France," on "Les Maîtres de la Contre-Révolution au XIXe Siècle"—showing the march backward of French serious thought through Joseph de Maistre, Bonald, Rivarol, Balzac, Paul Louis Courier, Sainte-Beuve, Taine, Renan, Fustel de Coulanges, Le Play, Proudhon, the Goncourt brothers, and Veillot. Count Léon de Montesquiou is author of "Le Sys-

tème Politique d'Auguste Comte"—the father of this mental reaction; and Georges Valois, converted by Carlyle and Nietzsche to Force and Faith, gives the philosophy of Authority in "L'Homme qui Vient," the coming master of democracy. Professor Dejob of the Sorbonne escapes into times less confused in "La Foi Religieuse en Italie au XI^e Siècle"—a work of erudition. Professor Gazier publishes "Études sur l'Histoire Religieuse de la Révolution Française."

"Le journal de Bord de la Belgica," by Philippe, Duc d'Orléans, is another book of royalties using their enforced leisure under democratic rule to explore Polar regions. The chief interest of the book is in its showing the Pretender to a defunct French throne as a man of action.

SCOPE OF THE NATIONAL MUSEUM.

TO THE EDITOR OF THE NATION:

SIR: Your observations in your issue of December 6 regarding the scheme of development of the National Museum are of great interest, for on that scheme hangs the future success or failure of that institution. I think that thirty years of trial have fully and fairly demonstrated the futility of the effort that has persistently been made to combine an interstate exposition, requiring usually about sixty acres of ground, with a modern museum of science. Consider for a moment the nightmare exhibit of "mining and metallurgy," the hall of "materia medica," which even medical men regard with utter indifference—and the "textile fabrics" which fairly cumber the ground. I have personally conducted through the National Museum many intelligent visitors, and my knowledge of their opinions of the industrial side of the museum is not a matter of conjecture.

What people want in the National Museum is not commerce, nor manufactures, nor department-store materials. All those fields are covered in the great (and interminable) expositions; and it may be added that nothing less than a five-million-dollar exposition can handle properly a national fair. With all due respect and loyalty to the memories of Spencer F. Baird and G. Brown Goode, I think the commercial and industrial features in the plan of the National Museum are now entirely out of place, and the sooner they are relegated to the background the better for the institution, and the better for the public. I am quite certain that the American people expect in the National Museum a great museum of science—a field which surely is broad enough for any one establishment. They expect it to cover geology, paleontology, mineralogy, botany, zoölogy, anthropology, and astronomy, and cover them well. To accomplish such results, the plan of development should not be handicapped by commerce, the industries, or art. The national capital needs and should have a genuine national art gallery, as a great independent institution, and not as a side issue to the National Museum.

The future of the National Museum should be regarded with the calm and cold eye of business. It is folly to attempt the impossible, and it is not wise to persist in travelling a road that leads to failure. Even as far back as 1882, I had not been in the National Museum six months when I heard it contemptuously spoken of as a "national junk-shop"; and during the succeeding seven years I heard that term many times.

New York, December 13.

GRILLPARZER'S PROPHETIC DESCRIPTION OF ARCHDUKE OTTO.

TO THE EDITOR OF THE NATION:

SIR: The recent death of the profligate Archduke Otto has sorely tried the loyal sentiments of the Austrian press. The newspapers have published columns upon columns of the gushing effusions usually called forth by the demise of princes, and but few have had more than veiled allusions to the scandals that made the name of the archduke during his life a byword and a hissing even in the court circles of Vienna. The *Neue Freie Presse* was one of the few papers which, while doing justice to the attractive personal traits the archduke undoubtedly possessed—he was a clever draughtsman and painter, and combined with a splendid physique a superficially engaging, easy good-nature—improved the occasion to speak of the temptations that beset princes from the days of their childhood, and of the flatterers that make it so hard for them to hear the voice of truth. These general remarks of the Vienna paper were long ago anticipated in that striking passage in Grillparzer's "Ein treuer Diener seines Herrn" (A faithful servant of his master), where Archduke Otto's prototype, Duke Otto von Meran, says of himself:

You call me bad, and bad I was and am,
Born on that hapless height where slaves abide
And sycophants, and men are never seen.
By flattery surrounded and upheld,
The toy of whim, tossed back and forth at will,
I plunged into the maddening whirl of life.
If bad I was, I might have been still worse,
If bad was all I taught, who taught me good?

It is interesting to recall that these mainly words were spoken in the Vienna of Metternich nearly eighty years ago ("Ein treuer Diener seines Herrn" was first performed in 1828), and that even the direct pressure brought to bear upon Grillparzer by the Emperor Francis was unable to force the poet to suppress the play. The characteristic incident is related at length in Grillparzer's "Autobiography," and is worthy of brief mention here. The day after the first performance of the tragedy, the president of the police, Count Sedlnitzky, sent for Grillparzer, and told him, with some embarrassment, that the Emperor had enjoyed his play so much that he wished to become exclusive owner of the manuscript. His Majesty was willing to compensate him for any pecuniary loss resulting to him from the withdrawal of the play from the stage. Grillparzer replied without hesitation that he was not contemptible enough to allow his work to vanish from the earth for any pecuniary inducement the Emperor could offer. The result of the interview was that the play, after a few performances, was withdrawn

from the Burgtheater, not to be revived until thirty years later.

GUSTAV POLLAK.

New York, December 10.

GREEK IN SECONDARY SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the recent discussion in your columns of Greek studies in the secondary schools I wish to emphasize the financial side of the matter. During 1902-4 the rules of the Chicago Board of Education provided that every class in the high schools must contain at least twenty pupils. Two years ago it was enacted that the smaller schools should be entitled to one teacher for every twenty-seven pupils in attendance and the larger schools one for every thirty-five. Inasmuch as every pupil has sixteen recitations per week and every teacher twenty-four, it will be seen that practically the size of classes was not much affected, varying from an average of eighteen in the smaller schools to twenty-three in the larger ones. The present rule is more complicated, but does not materially change the result.

Thus, a principal would rarely feel justified in giving so large a proportion of a teacher's time to third-year Greek, unless there were at least eighteen in the class. But to insure that many pupils for the "Iliad," the first and second-year classes must be considerably larger, so that at any one time the Greek enrolment would have to approximate seventy-five. Since the pupils are scattered in fifteen comparatively small schools, only a small percentage of them go to college at all; and since not all of these take the classical course, not a single high school in the city is normally in a position to offer instruction in Greek! Occasionally (a) some teacher is willing to teach Greek outside of school hours—but not even all of those wishing to study Greek are willing to take the subject under these conditions; (b) the pupil waits until he gets to college for his Greek; (c) if his parents can afford it, he attends a private school; (d) he changes from the classical to the Latin-scientific course. If this can happen in a city of the size, wealth, and importance of Chicago, no wonder that classical studies suffer elsewhere.

You may be interested in our experience with the "cheaper degree." Northwestern demands two languages from candidates for the B. A. degree, and at least one of these must be either Latin or Greek. While nearly as many continue to take both Latin and Greek as would do so with a stricter requirement, there has been a large increase in those taking these languages singly (especially Greek). It must be added, however, that there is also a resulting deterioration, for we do not find the modern language students so well equipped for studying Greek as are the Latin students. So there are things to be said both for and against the present system.

ROY C. FLICKINGER.

Northwestern University, Evanston, Ill., December 11.

Notes.

E. P. Dutton & Co. will publish almost immediately the following: "The Tower of London," by Canon Benham, with colored plates from illuminated manuscripts, and other illustrations; "Stories of the Italian Artists," from Vasari, arranged and translated by E. L. Seeley; "Vittoria Colonna," with some account of her friends and her times, by Maud F. Jerrold; "Westminster Abbey, The King's Craftsmen": a Study of Mediæval Building, by N. R. Lethaby.

John Lane Company will soon publish "A Queen of Indiscretions," translated by Frederick Chapman from the Italian of Graziano Paolo Clerici. It is the story of Caroline of Brunswick, the unwise and unfortunate wife of George IV.

Henry Frowde is about to publish the Oxford edition of the "Dramatic Works of Sheridan," with an Introduction by Joseph Knight.

Taking advantage of the revived interest in Lafcadio Hearn and his works, Little, Brown & Co. have issued a reprint of his "Some Chinese Ghosts," written in 1886, when Hearn was in New Orleans.

The Oxford University Press publishes "The Complete Works of William Shakespeare," edited by W. J. Craig, in a single volume. The type, as in the Cambridge Shakspeare, is necessarily small; indeed, a one-volume Shakspeare should be used only for reference. The present issue contains a Glossary and Index of Names, but no notes.

Two new volumes in Crowell's First Folio Shakspeare contain "Henry the Fifth" and "As You Like It." We have more than once pointed out the usefulness of this cheap reprint of the Folio text, and commended the work of the editors, Charlotte Porter and Helen A. Clarke.

No little ingenuity has been displayed by Paul Elder in making his "Mosaic Essays" (Paul Elder & Co.). By weaving together a series of brief quotations from every source he has constructed a series of fairly consecutive pages on friendship, love, happiness, nature, and success. By a clever device of printing, the authors of the quotations are inserted without breaking the flow of sentences too harshly. The book itself, of the holiday variety, is unique and attractive.

The American Unitarian Association issues four addresses by President Eliot on Franklin, Washington, Channing, and Emerson, in a single volume, entitled "Four American Leaders."

"It was the sight of the numerous English travellers following in the footsteps of 'Childe Harold' with Murray's handbook under their arms that suggested the first Baedeker," wrote Herr Baedeker himself to the London *Times*, in 1889. There is, thus, some reason for such a volume as Anna Benneson McMahan's "With Byron in Italy" (A. C. McClurg & Co.), which brings together the poems and letters which have to do with his life in Italy from 1816 to 1823. The photographic illustrations give added force to many of Byron's descriptions.

There are many different kinds of travel-books, and one of the most pleasing is the

garrulous, fanciful, idealizing, yet schematic chronicle of personality which Washington Irving and Longfellow taught us to savor. And of all knacks, that light yet satisfyingly absolute touch—that first fine careless rapture—is the hardest to catch. Most secrets of style are open nowadays, and everything can be attained by a method, but no one has written a second "Alhambra" or created a new "Hyperion." Yet that there are attempts we may be glad; they may lead us for brief moments in the old faery lands, though the gate to a disastrous and absurd bathos of reality is always too near. "Algiers," by M. Elizabeth Crouse (New York: James Pott & Co.) just misses this success. It has the whimsicality of preferring to know the East through Algiers, of all towns, and from a hotel villa, of all places. It has a healthy trust in very personal impressions and the courage to narrow much observation to simple, separate pictures. It has frequent felicity of phrase and sentence, pointed with individual insistence and caprice. But it explains, and the explanations are not convincing, either as art, or as learning. The art lacks the last touch, and the learning is painfully borrowed. That preliminary labor and carefully veiled scholarship which bottom the work of even the lightest of the great descriptive travellers do not show here. Charming as this book often is, it does not bring assurance with its interpretations. But it is often very charming.

The *Annales de Géographie* for November begins with a discussion of Friedrich Ratzel's theory of the geography of circulation given in his *Politische Geographie*. In the course of it many interesting and suggestive historical facts in regard to the great commercial highways of the world are brought in. How a country may be affected by the opening of a new avenue of trade is illustrated by the statement "that the construction of the Suez Canal has menaced so evidently the Turkish Empire that the development of the ways of communication in Asiatic Turkey, in the regions which have the fewest, has become the only means for preserving the empire." The editor, Vidal de la Blache, in the second and concluding article on the people of India as they appear in the census reports, treats of the movement of the population, the ethnography, languages, and religions. He does not believe that there is a great transformation of society going on through Western influences. The railroads far from dissolving the prejudices of caste have contributed to extend enormously their rule, and by the rendering pilgrimages easy have added to the ascendancy of the orthodox religion. That which the Indians owe above all to their present rulers is a clearer conviction of their rights. A sketch of the Geographical features of Cape Cod is contributed by Maurice Allorge, who suggests that in time Provincetown and Brest will be the two great Atlantic ports for passengers and mail. A resident of fourteen years in the basin of the Amazon, M. Le Cointe, says, as the result of his observations, that "the climate is warm, but not torrid, debilitating and enervating, but not essentially unhealthy, the notorious insalubrity of some regions being due to local and removable causes."

The popularity of even established names

comes and goes, and just now Blake is on the crest. But recently we had Mr. Sampson's accurate text of the lyric poems; next came a much-desired reprint of Swinburne's monograph; after that was the handsomely illustrated edition of Gilchrist's Life. The most recent work is "The Letters of William Blake, together with His Life by F. Tatham" (Scribners), edited by A. G. B. Russell. Tatham, sculptor and miniature-painter, knew Blake in his last years most intimately, and his account of the poet is the best contemporary document we have. He has been the object of much contumely because from religious scruples he was led to burn the greater part of the Blake MSS. that passed into his hands after the death of Mrs. Blake. Mr. Russell vindicates Tatham's honesty, and the Life certainly has the ring of sincerity. It does not add much to our knowledge of Blake derived from Gilchrist, and it is not particularly well written, but so far as it goes it strengthens the growing opinion that Blake was at bottom eminently sane beneath all his visionary excesses. The most striking paragraph in the book is the account of Blake's ecstatic death, of which Tatham was apparently an eye-witness. The best of the letters, especially the extraordinary reports of the writer's spiritual moods while in the service of Hayley at Felpham, are already familiar from Gilchrist's Life, but the present collection, as complete as the editor could make it, is highly welcome. Again the effect is to confirm the notion of Blake's sanity and scrupulous honesty. It must be added that Mr. Russell's Introduction is written from large knowledge, and is a really valuable essay on Blake as an artist. From careful investigation he accepts as substantially correct the account given by Tatham of Blake's method of painting, which Linnell and others after him have disputed.

In "Friends on the Shelf" (Houghton, Mifflin & Co.) Bradford Torrey writes a very pretty style. It is lithe and simple. Within its own limits it is resourceful, too, and full of variety; but its bounds are narrow. Or rather, it is the thought which lacks compass. There is a general sameness about Mr. Torrey's subjects; at least he sees them all in much the same light. It is his way to take an author to himself, rather than to give himself up to the author. Fairly characteristic of his usual attitude, or point of view, is the paper on FitzGerald. It is neatly done. The theme is evidently "sympathetic." But he has over-refined upon the original, subduing and "toning" away whatever ruggedness or saliency it ever possessed. His handling is all in the interest of "favor and prettiness." But in this particular case, as the effect is more or less suitable, the result is not unhappy. The essay on Anatole France, however, is much less successful. With respect to the subject the tone is altogether false. To his author's malice, irony, and lubricity he seems, on the whole, insensible; or if crossed occasionally by an uneasy suspicion, he dismisses it immediately. The kindly, indulgent visionary, the gentle dweller in dream and illusion whom he sketches, has little resemblance to the skeptic and licentious reality. It is not so very difficult, after all, to make a character en-

tertaining; but to make it like, that's the difficulty. Among all Mr. Torrey's portraits, FitzGerald and Anatole France, Thoreau and Stevenson, there is a remarkable family likeness. They all contain apparently certain features which are favorites of Mr. Torrey's and which he likes to trace in the world of letters. They are admirable and engaging traits, and they are pleasant to read about. Alas that in reality they should occur so seldom!

"Orthography," the address on the question of spelling reform, delivered September 15, at the annual commencement of Leland Stanford Junior University, by President Benjamin Ide Wheeler of the University of California, is issued in pamphlet by the trustees of Stanford. The address, with a brief introduction by Louis Dyer of Oxford, has also been printed as a six-penny pamphlet in England. President Wheeler urges, among other propositions, the following:

The establishment for the United States of a standard of written English different from that recognized elsewhere in the English-speaking territory is an isolating and divisive movement promising loss and waste to intercourse and culture; and introducing consciousness of contrariety where the opposite is desired. The needless irritation caused by the minor differences already existing points ominously to what would result from greater.

The English language is not the property of the people of the United States, still less of its Government; it is a precious possession of the English-speaking world, and the moral authority to interfere in its regulation must arise out of the entire body, and not from a segment thereof.

In regard to the changes proposed by the Simplified Spelling Board, President Wheeler says:

The interests here involved are too serious to be treated craftily or on the principle of the entering wedge. If these are all the changes to be made, they lack system and are unworthy. If more are to be exacted, let us know what we are doing.

In "The Power to Regulate Corporations and Commerce" (G. P. Putnam's Sons) Frank Hendrick contends that there is a national common law, and that this, in combination with the Constitution as it now stands, gives to the Federal Government adequate power to regulate corporations and commerce. The opening chapter (pp. 1-51), entitled "Historical Introduction—the Unwritten Constitution," fails to demonstrate its connection with the general subject. The remainder of the volume, though more pertinent, is still more disappointing. The text is composed largely of extracts from treatises and judicial opinions, usually with proper marks of quotation; but the treatises are chosen with little discrimination, and in selecting extracts from opinions the author fails to profit by one of his own quotations (p. 482) to the effect that an opinion "cannot be relied upon as binding authority unless the case called for its expression." The author's discussions are, it must be said, not always intelligible. Examples of unconvincing treatment of well-known topics may be found in the comments upon the Dartmouth College Case (pp. 74-78) and the Dred Scott Case (pp. 83, 84); and a sufficient example of the frequent indistinctness of the author's language may be found in the conclusion (especially pp. 498, 499).

In a recent issue of the Copenhagen

Tilskueren ("Spectator") Holger Pedersen compares the work of Kristoffer Nyrop, best known outside his native country through his monumental "Grammaire historique de la langue française," and Otto Jespersen, author of "Growth and Structure of the English Language." Both are professors at the University of Copenhagen, Nyrop holding the chair of Romance languages, while Jespersen devotes himself to English alone. Mr. Pedersen sees in Nyrop primarily the historian, while Jespersen is the philosopher of language. Nyrop has published books and pamphlets and articles on the most diverging subjects, and has made a study of a wide group of related languages. Yet the scope of his achievement is deemed more narrow than that of his less versatile colleague, who, though familiar with a dozen languages lying so far apart as Danish and Chinese, Finnish and Bantu, traces the law of growth almost exclusively in the two tongues that he has mastered completely, namely, Danish and English. Nyrop follows the development of some twenty varieties of the Romance group back to the common mother tongue in order to outline the history of the most important among them. Jespersen is culling instances from every language and dialect coming within his ken in order that he may find and formulate the general laws of human speech. Thus, the two scholars complement each other. The red thread running through all Jespersen's writings is the idea that the comparative perfection of a language must be measured not by the variety and the completeness of its forms but by practical usefulness. And as simplicity makes for usefulness, Jespersen holds that the process of simplification noticed, for instance, in the English language, is a sign of growth, and not, as some German philologists have held, of degeneration.

The translation of Paul Gruyer's "Napoleon, King of Elba" (J. B. Lippincott Co.), to use the English title of the book, fails to convey any literary value that the French may have. Apart from this, the subject is decidedly barren. At Elba Napoleon did nothing but mark time and keep his own counsel, so that there is little enough to be extracted from the episode. The author sets out a good part, though not by any means all, that is known, in adequate fashion. The illustrations are of moderate interest.

An introductory note by Dr. J. H. Rose and a number of illustrations serve for the republication of "Napoleon's Last Voyages" (Scribners). The text contains Ussher's and Glover's (Cockburn) journals of the journeys to Elba and St. Helena. Dr. Rose's introduction is of no particular importance, but several of the illustrations are new and interesting.

Miss Grace Norton has followed up her "Studies in Montaigne" with "Le Plutarque de Montaigne: Selections from Amyot's Translation of Plutarch Arranged to Illustrate Montaigne's Essays" (Houghton, Mifflin & Co.). Her main purpose is essentially scholarly, and has been executed in scholarly fashion. She prefixes Montaigne's cue to the several passages in Amyot on which he drew; and in regular progression we thus have, in Amyot's swinging Boccaccian style, those stories from the "Lives" and, more extensively, from the "Moral

Treaties" which have become commonplace. We are shown how Montaigne often took bodily from Amyot with or without slight variations; how he carelessly and sometimes perversely reports Plutarch's content, alters his names, embodies him ("stole" is Miss Norton's phrase) without the usual acknowledgment, ascribes to him what the Frenchman borrowed from another, not seldom improves the Greek relation. In this houndlike pursuit of leads, often very obscure, Miss Norton has surpassed her predecessors, and pushes research even to satisfying herself that Plutarch's quotation of Cicero's remark on Cæsar (p. 128) is not to be found in the orator's extant writings. In her judicious footnotes and prefaces she helps clear up the sense of Amyot's sixteenth-century French, which presents few difficulties in spite of the untouched punctuation. So much said (and it is too little by way of suggesting Miss Norton's admirable painstaking), we recommend her delectable anthology to all who read modern French with ease. Let us cite Amyot's version of "War is hell" in Camillus's rejection of a proffered betrayal of the besieged Falerians (p. 6): "—que la guerre estoit bien chose mauvaise, et où il se faisoit beaucoup de violence et d'oultrages; mais toutefois qu'encore y avoit il entre gens de bien quelques loix," etc. Or again, compare Xerxes's menace to Mount Athos (p. 4), "merveilleux, qui de ta cyme touches au ciel, garde toy bien, . . . autrement je te denonce que je te couperay toy-mesme, et te jeteray dedans la mer," with that grander Orientalism, "Who art thou, O great Mountain? Before Zerubbabel thou shalt become a plain!" An Athenian boycott of the murderers of Socrates is familiarly described at page 172. The book is handsomely printed, but the division of words is not always *à la française*, as (p. 67), pub-lique, (p. 69) mag-nificquement, (102) re-spirer, (129) re-spondit.

Prof. A. Guyot Cameron has issued, through Henry Holt & Co., a volume of selections from Zola, with a biographical and critical introduction of fifty-nine pages. The bibliography, if not so complete as Vizetelly's, nevertheless bristles with French, English, and American criticism. There are also useful notes. Some of the more notable selections are "L'Île du Diable"—the prison of the unfortunate Dreyfus—"L'Émeute," from the mine story; "La Défense de Bazeilles," a touch of the Franco-Prussian war, and the "Lettre à la France," in defence of the outraged Jew. In several instances the date of first-production of the essays is lacking.

Herbert C. Sanborn has edited Von Scheffel's "Trompeter von Säckingen" for Ginn & Co. The entire poem is given—287 pages; there is a fair portrait of the author, and a twenty-six-page introduction, biographical in nature. The text is heroically annotated, Greek mythology and other subjects that one would expect to find in a good book of reference being explained in detail. This contributes to make the book too large, too unwieldy, and too expensive for an average high school or college text.

A monograph on "The Stress Accent in Latin Poetry," by Elizabeth H. du Bois (Columbia University Press, the Macmillan Company, agents), is commended by Prof.

Harry Thurston Peck in a prefatory note as containing "a condensed and careful summing up of the most authoritative evidence" on the subject and "an ingenious and plausible theory of the Saturnian verse," with an endeavor to reconcile the opposing views as to the apparent clash between word-accent and ictus in the classical meters. The little book of ninety-six pages fairly justifies Professor Peck's imprimatur, notwithstanding a too frequent looseness of statement, careless proof-reading, and the small ratio of original discussion to mere summarizing of the views of others.

Jeremiah Curtin, well known as a translator of Russian novels, died at Burlington, Vt., last Friday. He was said to be proficient in seventy languages and dialects. Born in Milwaukee in 1840, Mr. Curtin early acquired a rudimentary knowledge of German, Norwegian, and Polish by talking to the emigrant settlers of the neighborhood. Later, when he went to Harvard, his skill as a linguist was further developed. After his graduation in 1863, he was appointed by President Lincoln secretary of the legation at St. Petersburg. While there he met Sienkiewicz, and it was the Polish author himself who suggested that Mr. Curtin undertake the translation of his works. Later Mr. Curtin became consul-general at St. Petersburg. He travelled extensively, and wrote entertainingly of his journeys. For many years he lived among the Indians in remote parts of California; and he was engaged for a time in work for the Bureau of Ethnology of the Smithsonian Institution. He was author of a number of books relating to folk literature, among them "Myths and Folk Tales of Ireland," "Western Slavs and Mongols," "Hero Tales of Ireland," "Creation Myths of Primitive America and Their Religious and Mental Relation to the History of Mankind," and "The Mongols." His best-known translation is that of Henryk Sienkiewicz's "Quo Vadis."

We read that Mrs. John La Touche has died in Dublin at the age of eighty-one. She was the mother of the "Rosie" of the "Praeterita," whose death in 1872 affected Ruskin so profoundly. He had first met her in Florence in 1858, when she was a child of ten, and had given her lessons in drawing.

One of the small questions of literature is why Charlotte Brontë married the Rev. Arthur Bell Nicholls. A correspondent of the London *Times*, writing of his recent death, gives a picture of the man which quite explains the act. Nicholls, it is well known, was the curate of Charlotte's father at Haworth, and was taken off by her in "Shirley" under the thin veil of Mr. Macarthey. He accepted the satire hilariously, and read the account of the curate aloud to Mr. Brontë, roaring with laughter, and positively triumphing in his own character. On first offering his hand he was rejected by Mr. Brontë with some scorn, and left the parish. But he corresponded with Charlotte, and after a while was recalled by the vicar, who needed his earnest, honest support in the parish work. She was thirty-eight at the time of the engagement; he was thirty-seven, "a broad-shouldered and strong-framed man, with a premature passion for fresh-air and open windows, extremely in earnest in regard to

the prosecution of his work, and secretly determined to make an ideal clergyman's wife of Charlotte Brontë." The character seems attractive enough. After her death, he devoted himself to her father, and his implicit disapproval of Mrs. Gaskell's Life was because he thought that work undervalued the old vicar. Some time after Mr. Brontë's death he returned to Ireland and settled on a farm.

Vladimir Stassow, the well-known Russian essayist in the field of art, music, literature, and archæology, has died in St. Petersburg at the age of eighty-two. He was best known for his studies of the Russian sagas. Of late years he had been employed in the Imperial Public Library, where he devoted much time to the study of early literary sources.

Julian Klaczko, whose death in his seventy-ninth year is reported from Cracow, was the son of a Jewish clockmaker. He studied at Königsberg and Heidelberg, assisted Gervinus in literary undertakings, and held a position in the Austro-Hungarian Foreign Office. He wrote a number of books on Polish literature. His "Causeries Florentines" won him a prize from the Académie Française.

"Minerva" for 1906-1907 (Lemcke & Buechner) comes to us thicker by a number of pages, the increase being due to a complete revision and extension of the part dealing with France. The frontispiece is an excellent photogravure of President Nicholas Murray Butler.

A list of books useful for teachers and students of the kindergarten is published in the December Bulletin of the Boston Public Library. It includes works on the history of education, child and nature study, the kindergarten theory and practice, with a selection of stories, poems, songs, and games.

The Bureau of Education at Washington has just issued, in Bulletin No. 2, 1906, a summary of the report of the Royal Prussian Commission which visited this country in 1904 to examine our educational system. One of the most striking passages in the bulletin is a comparison between German schools and American, written by Dr. Dunker of Berlin:

While with us the school frequently points out to the children the inadequacy of their work, holds them to the perfect solution of minor tasks with painful attention to all difficulties, and overwhelms them with difficulties and exceptions, the opposite practice prevails in the American school. Difficulties are avoided, mistakes passed by; frequently the pupils are given great tasks whose performance would exceed their power, and the school is satisfied with a childish treatment of the subject and makes the impression upon the children that the problem has been fully solved. This results in quickness of judgment, self-confidence, superficiality, and dilettantism (*Lünnhaftigkeit*).

The twenty-fourth annual meeting of the Modern Language Association will be held at Yale University, December 27 to 29. Those who will speak or present papers are W. L. Cross, A. S. Cook, Kenneth McKenzie, C. C. Glascock, G. M. Baker, J. M. Berdan, C. C. Clark, and Rudolph Schevill of Yale; Albert Schinz and P. W. Long, Bryn Mawr; Camillo von Klenze, Brown; N. E. Griffin, G. H. Gerould, R. K. Root, and J. P. Hoskins, Princeton; H. A. Todd, Brander Matthews, J. E. Spingarn, J. L.

Gerig, and G. P. Krapp, Columbia; Charles Harris, Western Reserve; C. P. G. Scott, New York city; Lane Cooper, Cornell; E. C. Roedder, University of Wisconsin; C. A. Smith and J. D. Bruner, University of North Carolina; W. W. Newell and Dr. Lucy Allen Paton, Cambridge, Mass.; J. B. Henneman, University of the South; J. W. Cunliffe, McGill; C. A. Eggert, New Haven; P. A. Hutchison, Harvard; T. S. Baker, Jacob Tome Institute; E. C. Adler, William Penn Charter School; W. E. Bohn, University of Michigan; Miss Gertrude Buck and Miss L. J. Wylie, Vassar; P. G. A. Busse, Ohio State University; Joseph Dunn, Catholic University; A. A. Kern, Millsaps College; C. J. Kullmer, Syracuse University; R. A. Law, University of Texas; R. L. Ramsay, Johns Hopkins; O. M. Johnston, Leland Stanford. The American Dialect Society will hold its meeting at New Haven on December 28.

The twelfth annual meeting of the Central Division of the Modern Language Association of America will be held at the buildings of the University of Chicago December 27 to 29.

The programme of the third annual meeting of the American Political Science Association at Providence, December 26 to 29, includes addresses and papers by President W. H. P. Faunce, J. Q. Dealey, and L. F. Ward, Brown University; the Hon. Simeon E. Baldwin, New Haven; J. W. Jenks, Cornell; Rear-Admirals C. S. Sperry and F. E. Chadwick, Newport; C. N. Gregory and F. E. Horack, State University of Iowa; P. S. Reinsch, University of Wisconsin; G. H. Haynes, Worcester Polytechnic Institute; W. B. Weeden, Providence; Albert Shaw, W. C. Johnson, and Poultney Bigelow, New York; M. H. Robinson and J. W. Garner, University of Illinois; Senator W. W. Armstrong, Rochester; W. G. L. Taylor, University of Nebraska; C. E. Merriam, University of Chicago; J. E. Shea and Alleyne Ireland, Boston; Charles Johnson, Flushing, N. Y.; Stephen Leacock, McGill; C. L. Jones, University of Pennsylvania; H. C. Morris, Chicago; the Hon. W. F. Willoughby, San Juan, Porto Rico; A. H. Snow and O. P. Austin, Washington, D. C.

The Supplement (1902-05) of "The United States Catalog" is something more than a mere reprint of the "Cumulative Book Index" for those years, as published by the H. W. Wilson Co. More than two thousand books have been entered which were omitted from the "Index" because the price or publisher could not then be found. And in all cases there has been complete revision of prices and other data furnished by the publishers.

The librarian of the University of Munich, H. Schnorr von Carolsfeld, remarks in the November *Zentralblatt für Bibliothekswesen* on the growing interest which the public is taking in the management and affairs of libraries. He points out that favorable and unfavorable comment alike should receive careful attention by librarians. Dr. Schnorr selects one desideratum which has lately been put forward from many quarters; namely, that less time should be required in getting books that have been called for. He suggests as a remedy the selection of a special collection of the books and periodicals that are most frequently called for, as an in-

termediary between the reference collection and the general collection in the stacks. These books might be given out with somewhat less formality than those in the stack. Such an arrangement would be of great advantage, not only to the users of the libraries, but to the library authorities as well, in doing away with a large amount of wasteful routine.

The movement inaugurated by W. P. Cutter of the Forbes Library to consolidate the library interests of the country in opposition to the proposed change in the copyright law, whereby libraries would be deprived of their present privilege of the free importation of foreign editions of American books, has secured wide support.

At the auction rooms of Hodgson & Co., London, in the week ending December 1, the following prices were obtained: Shakspeare's "Poems," with portrait by Marshall, first edition, 1640, £220; "The Whole Contention between the Two Famous Houses of Lancaster and York," 1619, £75; "The Tragedy of Hamlet," 1637, £107; "The Merchant of Venice," 1637, £237; "Sir John Oldcastle," 1600, £64; Kelmscott Press Chaucer, £48, and Doves Press Bible, 5v., £10.

At the sale of books and manuscripts of L. W. Hodson of Wolverhampton, by Sotheby, Wilkinson & Hodge, London, December 3, 4, and 5, Caxton's Chaucer, 1475, 65 leaves only, brought £105, and another fragment of 32 leaves £62; the Kelmscott Press publications, on vellum, 25 works, including the Chaucer, £744. The original manuscripts of William Morris's published works, 24 in all, sold for £1,239 5s. Manuscripts on vellum brought the following prices: St. Augustine's "Sermones Super Psalmos," twelfth century, £48; Bede's "Historia Ecclesiastica," twelfth century, £76; Biblia Latina Vulgata, northern French, illuminated, thirteenth, £390; another, finely illuminated, fourteenth, £630; Legenda St. Catherinae de Siena, circa 1450, £240; Chaucer's "Canterbury Tales," fifteenth century, £180; Gratianus, "Decretales," illuminated, fourteenth, £440; Horae, richly illuminated, fifteenth, £660; Missale Romanum, Italian, finely illuminated, fifteenth, £135; Psalter, decorated, fifteenth, £104; another, ad Usum Sarum, fourteenth, £210; Testamentum Latinum Vulgatum, with miniatures, twelfth, £670.

Feill a' Chomuinn Ghaidhealaich (Highland Association Bazaar) will be held in St. Andrew's Halls, Glasgow, October 31 and November 1 and 2, 1907, to raise money in order to promote the teaching of Gaelic; to develop Gaelic literature, music, and art; and to encourage home industries among the Gaels. The movement, under the presidency of the Duchess of Argyll, has already secured the support of many influential Scots.

STUDIES IN HISTORY.

The Purchase of Florida, its History and Diplomacy, 1776-1819. By Hubert Bruce Fuller. With Maps. Cleveland: The Burrows Brothers Company.

Scholarly work in the field of American diplomacy is so rare as to merit cordial approval when it appears; and this book of Mr. Fuller's on the diplomacy attending the purchase of Florida from Spain is so far superior to the majority of essays on

the foreign relations of the United States which have appeared in recent years, that it is welcome alike to the student and the general reader. The work is well-proportioned, judicial, and eminently readable, and in it we have the only treatment of a controversy, vexatious to all concerned and far from creditable to American diplomacy, that can be considered even approximately thorough.

Passing rapidly over the early history of the Floridas, Mr. Fuller begins his narrative proper with Gardoqui's letters to Jay, secretary of foreign affairs under the Confederation in 1786, regarding the western boundaries between Spain and the United States. With admirable skill he traces the course of an intricate, tortuous, and exasperating governmental policy, based on doubtful, and even false, claims, and shaped by a public opinion that was inflamed by hatred of the dilatory and diplomatic Spaniard and by the aggressions of Jackson before and during the Seminole war. The situation was often one of great confusion; on one side was the United States Government, confronted by the schemes of separatists in the Southwest, the intrigues of filibusters, the unrestrained license of frontier settlers, the savage forays of Indians maddened by unjust treatment, and the widespread popular suspicion of England and Spain; on the other was Spain, reduced to powerlessness by the machinations of Godoy and the pitiless policy of Napoleon, yet proudly endeavoring to save something from the wreck of her colonies, and to maintain the appearance at least of an independent power. Through the mazes of this complicated labyrinth Mr. Fuller threads his way with caution and self-restraint. He adheres closely to the purpose in hand, and refuses to be drawn aside into a discussion of related events, such as the Louisiana Purchase, the Burr Expedition, and the war of 1812, except so far as they throw light on the subject under consideration.

Mr. Fuller has the courage to believe that he can be truthful and yet not unpatriotic, and refuses to be influenced by the unproved assertions of those who charge Spain with duplicity, and England with aggression. He finds little to commend in the attitude of Jefferson, Monroe, John Quincy Adams, and Andrew Jackson, who shaped the policy of the administration toward Spain during this period. He believes that the diplomacy employed to win Florida from the hands of impotent Spain was born of might, not of right; that it was cradled in casuistry, and that it can be justified only by reference to the fetish of manifest destiny. That he is right, no one who reads his narrative can doubt, and the conclusion is irresistible that in the case of Florida, as later of Mexico, the United States won success at the expense of honor.

Excellent as is Mr. Fuller's book and valuable as are the new facts that it contains, it is open to two serious criticisms. The material upon which it is based is inadequate, and the knowledge which it displays of European diplomatic situations is insufficient. Mr. Fuller has been content with the foreign correspondence in print in the American state papers and in manuscript in the diplomatic archives of the Department of State, and has taken no account of the material in Spanish archives

at Simancas, in the archives of the Indies at Seville, and in the Archivo Histórico-Nacional at Madrid. There is scarcely a point touched upon in this book that would not have been better treated had the writer studied the more complete evidence for the Spanish side of the case. Mr. Fuller can hardly have been ignorant of the existence of this material, inasmuch as a careful review of its character was printed in the report of the American Historical Association two years ago. Whether further research on his part would have altered his general conclusions may be doubted, but that it would have strengthened his presentation of many minor and some major issues is certain. For example, there is a large number of documents arranged under the *negociado* of the United States in the archives at Madrid, which throw light on the strained relations between Spain and the United States in the years from 1817 to 1819, a subject in the treatment of which Mr. Fuller is not at his best.

In the second place, Mr. Fuller does not handle the intricacies of European diplomacy with the sure touch of an expert. We do not refer to the more secret aspects of British and French policy, to discover which a search among the papers of the British Foreign Office or of the Archives des Affaires Étrangères or Archives Coloniales at Paris would be necessary in order to supplement the results of an examination of the Washington archives, to which Mr. Fuller has limited himself. We have in mind the more familiar diplomatic situations which every student of diplomacy ought to have at his finger tips.

For example, Mr. Fuller says that "since the termination of the Napoleonic wars and the second treaty of Paris (1815), England had become isolated and now (1818) stood alone against the Continental Powers" (pp. 253-254). The facts are these: In 1818 was held the conference of Aix-la-Chapelle, at which England, represented by Castlereagh, took a leading part and was so far from isolated or standing alone that Lord Liverpool's government has been severely judged because of its sympathetic coöperation with the other Powers in the work of that conference. Furthermore, the Powers acted in friendly accord at Aix-la-Chapelle, and in discussing the relations between Spain and her colonies agreed that interference by force was undesirable, and that mediation was the wiser and more equitable policy. Mr. Fuller has no right to assume, as he does in the same paragraph, that had England and the United States gone to war in 1818, the Continental Powers would have taken advantage of that event to aid Spain in coercing her rebellious colonies. Metternich's policy of intervention did not triumph till 1820, a year after the close of the negotiations which ended in the purchase of Florida, and it was not until the Congress of Verona, in 1822, that the decision to intervene in the affairs of Spain was actually reached. Therefore, Mr. Fuller's later statement (p. 281) that in 1815 "Continental Europe formed the holy alliance to help the Spanish Bourbons, to the extent even of subduing her (*sic*) rebellious colonies" is manifestly incorrect. Though it is true that after 1822 fears of European intervention in Spanish-American affairs were felt in the United States, and gave rise

to Monroe's famous message of 1823, yet it is extremely doubtful if the European Powers, among whom France was the only maritime State, ever seriously considered sending troops across the ocean. It is true that from 1823 to 1826 England seemed for the moment isolated, because of her refusal to accept the decision reached at Verona, but the isolation was more apparent than real, and came to an end in 1826, with her agreement with Russia on the Greek question. Mr. Fuller has made the serious mistake of supposing that the diplomatic situation after 1822 existed also in the years from 1815 to 1819.

Mr. Fuller has written an admirable book, and it is much to be regretted that he has not had a little more patience to extend his researches and to make more sure his grasp upon general diplomatic history that his work might have been exhaustive in treatment and, as near as possible, final in all its judgments.

The Guilds of Florence. By Edgumbe Staley. Illustrated after miniatures in illuminated manuscripts and Florentine woodcuts. With bibliographical and chronological tables. Chicago: A. C. McClurg & Co. \$5 net.

Among Mr. Staley's numerous disqualifications for the task which he has essayed may be counted an insufficient knowledge of the general history of Tuscany, and a fixed determination to maintain the preëminence of Florence and her people over all her rivals. "This," he says, "I am entitled to hold and to set forth from the nature of the case. She was not only the Head of the Tuscan League, but the Head of Modern Civilization" (p. vii.). Such a position may or may not be tenable, but the attempt to establish it is fatal to the merits of the work before us, since the author embarks upon his enterprise in the spirit of an advocate, and is so blinded by his partisanship that he recklessly tramples on the historical verities and boldly claims for his protégés virtues which they never possessed, and glories which indisputably belong to other nations. Probably the most flagrant instance of such disingenuousness is to be found on page 13, where the Battle of Montaperti becomes a Florentine victory! But this by no means stands alone. "All trade routes converged upon Florence" (p. 23). In direct opposition to all contemporary evidence, the integrity of the Florentine judges is belauded to the skies (p. 91); and we are informed that "liberty of industry was always a distinguishing mark in the political constitutions of the Republic" (p. 50). Everything that is good is of Florentine origin. Even cricket and football must no longer be regarded as English sports, having been borrowed from Florence in the sixteenth century (pp. 481-2). In support of such assertions Mr. Staley can, of course, produce no proof and no authority; and therefore, in direct proportion to the weakness of his case, his asseverations become more positive. "This," he says, speaking of *Palla e Maglio* (*sic*), "was without doubt, the parent of the British national game."

It is, however, only fair to admit that Mr. Staley's inaccuracy is equally conspicuous and all-pervading when it profits

neither him nor his clients anything—inaccuracy of statement, inaccuracy of style. From the preface to the bibliography the book is crammed with mistakes.

As a reason for shirking original research, Mr. Staley informs us that "the early Constitutions and Statutes of many of the Guilds were written in an almost insoluble mixture of abbreviated Latin and vernacular Tuscan—the deciphering of which would easily consume any man's natural lifetime." The worth of such an excuse will be best appreciated by those who have worked in the *archivi* of Italian cities; but we can well believe that, in Mr. Staley's case, the difficulties were indeed insurmountable, since his knowledge even of modern Tuscan appears to be extremely limited. Numerous examples might be cited; it is sufficient to quote his translation of *Macstri d'Abace e Gramatici* as "Rope and Hemp-merchants" (p. 60).

The bibliography is as remarkable for its omissions as for the number of excellent works which it contains, and which, if Mr. Staley had read them intelligently, might have saved him from innumerable errors. Yet the omissions are none the less significant for that. How is it possible to deal adequately with "reprisals" (*rappresaglie*), and especially with Florentine reprisals, without some knowledge of the monumental work of Professors Del Vecchio and Casanova? or with the great struggle between Florence and Siena for commercial supremacy without studying the works of Zdekauer, Mengozzi, and Paoli, and above all the *Lettere Volgari*? The list of important omissions might be increased indefinitely; but enough has probably been said to prove that the work is thoroughly untrustworthy.

TWO VIEWS OF AMERICA.

The Future in America: A Search After Realities. By H. G. Wells. New York: Harper & Bros. \$2 net.

Mr. Wells spent only six or seven weeks in America, and yet he has produced a book to be reckoned with. He has struck some nails on the head that have, perhaps, never been struck before—at least with so emphatic a hammer. Mr. Wells is properly apologetic, and even modestly compares himself to an ant crawling over the carcass of an elephant. An eagle, however, can see more of a country in one short flight than an ant in the whole course of its existence; and if Mr. Wells is not an eagle, he has at least the eye of a hawk.

Those who know Mr. Wells only from one of the least successful of his fantastic romances (such as "The Food of the Gods" or "The First Men in the Moon") must disabuse their mind of the notion that he is merely a sort of superior Jules Verne for adults. They must think of this critic of America as the sociologist (much as he would disclaim the label), who is now beginning to be taken seriously in Great Britain; as the author, translations of whose writings are widely read and highly appreciated in France. They must also recognize that this book is no mere record of the disconnected experiences of a passing traveller, but that it is, so far as it goes, a searching examination of the United States in the light of a definite philosophy of human progress. Like Heraclitus, Mr.

Wells is interested in Becoming rather than in Being. The date that attracts him in regard to America is not 1776, but 1976. He rejects the "scientific" method of marshalling past experiences in favor of the "critical, literary, even, if you will, artistic" methods. It is the "poietic power of exceptional individual men" that counts. His "hero in the confused drama of human life is intelligence inspired by constructive passion." He is seeking an answer to the question, "What are you going to make your future of, for all your airs?" And withal, he believes passionately in the future of mankind.

Mr. Wells obviously came to America with a strong hope that here he would find the nearest approach to Utopia "in the making." The sting of his criticisms lies largely in the fact that they are in many instances patently due to genuine, unlooked for, and even amazed disappointment. He is singularly free from "John Bullish" superciliousness. Indeed his severest word of blame for an American institution is often that it is even worse than in England. At times he comes near having a "passionate love and worship for America" (p. 150). In sociology, pedagogics, and social psychology "America is producing an amount of work, immense in comparison with our own British output."

One of Mr. Wells's chief arraignments of American civilization is its lack of order, discipline, finality, constructiveness, and fixed purpose. Its progress seems to him almost "as something inevitable and inhuman, as a blindly furious energy of growth that must go on." It has "no sense of accomplishment or finality." He feels the urgent need of "a creative assimilation, the cry for synthetic effort, lest all the great being, the splendid promise of a new world, should decay into a vast unprogressive stagnation of unhappiness and disorder." The owners of American wealth are often "too stupid to understand the huge moral burden" it carries. Newport sounds a "note of magnificent irresponsibility." American givers are generous, but "they give individually, incoherently, each pursuing a personal ideal." The men "who are creating the greatest system of correlated private properties in the world . . . seem for the most part to be men with no ulterior dream or aim." Connected with this is what Mr. Wells calls "State Blindness," or "lack of sense of the State." By this he does not mean that the American is not vigorously patriotic, but that he has no compelling sense of his own personal responsibility to the community, no luminous realization of the way in which all his activities, private as well as public, form part of a large constructive process.

The liberty for which the great statue in New York Harbor stands is largely, according to Mr. Wells, the liberty of property, which, as a result of the complete triumph of unrestricted individualism on this side of the Atlantic, has become more absolute than in Europe. This view he substantiates by pointing to the decision of the Supreme Court against the constitutionality of an income tax. Americans resemble the business men of Birmingham and Lancashire. The wealthy are not absorbed into an aristocratic governing class. Here, more than anywhere else, is the im-

mortality of the competitive system taken for granted. The world of individualistic business competition is so elaborately organized as at once to demand and excuse the existence of a series of Rockefellers, big and little. Graft, the inefficiency of Congress, the disgrace of the child-worker, the "delusion" as to the superiority of the American system of public school education, the ineffective and fossilized culture of Boston, the brutality of Chicago—all come under Mr. Wells's lash.

Two of the most serious chapters in the book are those on "The Immigrant" and "The Tragedy of Color," and they are perhaps those with which the American reader will be most inclined to join issue. Mr. Wells believes that this country has now reached a point where it can no longer assimilate or improve the inferior human material it is importing in such enormous quantity, and that a serious lowering of the standard of life and civilization is the inevitable consequence. The fact that this process is concealed by the "protective mimicry" of cheap American clothes and paper collars makes it only the more insidious. "The child of the immigrant is now a worse man than his father." The tragedy of color in the United States affects Mr. Wells as it must affect all visitors of any depth of feeling. He, of course, grants that the British attitude, in (*e.g.*) Natal, is just as crude, unintelligent, and wrong. The colored man seems to have attracted him strongly, and Booker T. Washington stands with President Roosevelt and President Eliot of Harvard as, perhaps, one of the three men who most impressed him in America. Yet he protests vigorously against Mr. Washington's view that it is possible for black and white to live side by side without mingling and without injustice. "No peoples have ever yet endured the tension of intermingled distinctness."

The final attitude in which Mr. Wells is left is one of mingled puzzlement and hope, of admiration and dread, of interrogation. Yet it would be wrong to regard it as merely negative. To thinkers of brilliant imagination, and paramourly to the artist, one order of facts naturally appeals to the practical exclusion of all others. Thus, it is quite conceivable that the salvation of the United States may come from some quite other source than the poiëtic superman whom Mr. Wells desiderates. Yet his very doubt is suggestive. He realizes that America is "thinking"; he sees that "a great awakening, a great disillusionment, is going on in the American mind"; he recognizes that the younger generation is very different in its outlook from that which is passing away, but he doubts its ability to cope with the dangers ahead. While he feels that an illiterate America would be doomed to some such fate as the stagnant commercialism of China or the plutocratic decadence of Rome, he sees clearly the hope lying in the fact that America is not illiterate, but has "unprecedented reservoirs of intelligence and understanding," which make "the problem of the world to-day unique and incalculable," which "provide a cohesive and reasonable and pacifying medium the Old World did not know."

The weaknesses of Mr. Wells's book lie on the face of it. His data will not always

bear out his conclusions; his generalizations are sometimes too sweeping. He often shows a childlike ingenuousness in believing what he is told, and it is obvious that the wrong men have sometimes got hold of his ear. The details which he has portrayed with so masterly a hand do not combine into a quite satisfactory whole. Yet, when all deductions are made, this remains one of the keenest and most brilliant works ever published about the United States. This, be it noted, is not to say that it is one of the most carefully weighed or even that it will be one of the most permanently valuable. It may be unhesitatingly recommended to every one who knows America well enough to supply his own criticisms. But for the foreigner, for the man who does not know America at first hand, this fascinating book would be distinctly misleading, unless its perusal were accompanied by constant reference to some cooler testimony, such as is supplied by James Bryce's "American Commonwealth."

The illustrations are fair. Among the misprints are *Otünsterberg* (for Münsterberg p 121); *"inseln"* (for Pinseln, p. 215).

Industrial America. Berlin Lectures of 1906. By J. Laurence Laughlin. New York: Charles Scribner. \$1.25.

Among the first fruits of the interchange of professors between American and European universities are sundry volumes embodying the lectures by which the academic envoys seek to interpret for foreign hearers the literature, science, or institutions of their native land. "Industrial America" consists of seven lectures, upon a variety of subjects likely to interest the German audience before which they were delivered—in the German language, the preface tells us—early in the present year. In a summary yet interesting and not unprofitable manner, the author canvasses the problems now uppermost in American industry, labor, and finance; and closes with a brief account of the present status of economic thought in the United States.

Beginning with our foreign trade, Professor Laughlin explains the cause of that commercial expansion which has made American competition dreaded in Europe, and prophesies that such competition is likely to increase rather than diminish. This leads to protection and reciprocity, subjects of the keenest interest to his hearers. Our protective system, long since outgrown, if indeed it was ever needed, he describes as an incubus of which the country cannot easily rid itself if it would, on account of the pressure of selfish interests. For genuine reciprocity he can see but little immediate hope, and he allows his audience to indulge in no illusions as to what is likely to happen to reciprocity with Germany at the end of the year of grace which has been allowed the American Government. Upon the moral and political evils wrought by protection he speaks with no uncertain tones, which contrast refreshingly with the halting utterances of some now accepted leaders of economic opinion.

Then follow chapters on the labor problem and upon Trusts and railroads, concerning which the author has little new to say; as well as one upon American banking,

with a strong argument for a rational currency system. It is worth noting that Professor Laughlin sees clearly that a sound asset currency would not rescue our large banks from conditions brought about by their own recklessness in lending the country's cash reserve to speculators, but would merely enable the smaller banking institutions to meet the varying seasonal demands of their customers. For conditions such as have recently existed in New York, he points out, the true remedy is not an "elastic" currency, or aid from the Federal treasury, but rather "a revision of the character of their collateral." Our currency system, he justly says, is in no way responsible for the evils of which great financiers complain:

The banks wish to hold on to existing financial deals, to keep up the values of securities. They could easily meet the demand for legitimate loans if they took in sail and reduced their expanded discounts on favorite promotions.

If more of the advocates of an elastic currency showed the same good sense, their cause might progress more rapidly than it has done in the past.

To describe, much more to appraise, the tendencies and achievements of contemporary thinking, even in one's chosen field, is notoriously a difficult task; but Professor Laughlin does not come off without credit in his last chapter, upon the present position of economic science in the United States. He explains, with insight, the various influences—English, German, and American—which have affected the progress of the science since the great awakening in the seventies and early eighties; and then passes on to present-day writers who are wrestling with the difficult problems of value and distribution. Here and there, perhaps, we detect an amiable tendency to distribute agreeable personal puffs among confrères in academic circles; but upon the whole the author's conclusion is the eminently sane one that "with obvious exceptions, there is a great deal of mediocre work." Promise for the future rather than important actual achievement is still the most that can be claimed for American economics.

Of the value of discursive volumes like "Industrial America," which aim to interpret for the general reader current movements in a number of large and important fields, there may be differences of opinion. But for our part we believe that an occasional effort of this character, by a competent hand, is well worth while; and that the specialist as well as the general reader may profit thereby. In the specialization of study, which in this country is likely to begin too early, if not to be carried too far, it is helpful to put minute investigation aside once in a while, and to endeavor to interpret and correlate the work done in a number of related fields. In the present instance Professor Laughlin has acquitted himself creditably, and we trust that his successors may be equally fortunate in their diplomatic missions.

CURRENT FICTION.

The Secret of the Moor Cottage. By H. Ripley Crommarsh. Boston: Small, Maynard & Company.

A boy critic once described a Shakspeare play as being not so funny as "The Geisha"

and not so exciting as "Secret Service." Mrs. Cromarsh's novel is less exciting than "The Leavenworth Case" and less original than "The House on the Marsh," but it is a good mystery story for all that, with a motive by no means commonplace. A young English gentleman goes to work on a Yorkshire farm to acquire practical knowledge in the management of his own estates. He falls into friendship with the inmates of a neighboring cottage, surrounded by mystery and suspicion, in which he presently becomes embarrassingly implicated. The telling of even the darkest doings is in a subdued but not spiritless key, and this serves to bring the book into the desirable category of the comfortable-dreadful. A really stirring piece of writing is to be found in the chapter which describes the search for lost sheep among the "pot-holes" of the Yorkshire fells. The dense fog, the sudden cliffs and caverns, the terrifying sound of mysterious waters deep down beyond the sight, make fine shuddering settings for the catastrophe which shatters the secret. In the final disposition of the characters there is a negative surprise which is unnoyous but perhaps only the more natural.

I Will Repay. By Baroness Orczy. Philadelphia: J. B. Lippincott Co.

In romance the spell of the French Revolution never weakens. Blessed as Mesopotamia to the ears of the pious are the very words National Convention, Citizen-Deputy, Quatorze Juillet, Fructidor, Ça ira, Sans-Culottes, Tricoteuses. They may all be found profusely flourishing in this volume, and if they do not claim to be exact history, they assuredly serve to lend atmosphere. A prologue announces the motive. In 1783 a young vicomte is killed by a man of bourgeois ancestry in a duel which the aristocrat had insisted upon, to the grief of his older antagonist. The boy's father, too old to avenge himself, binds his young daughter by a most solemn oath, to seek out the slayer, Paul Déroutède, and encompass his death, his ruin, or dishonor. In Paris in 1793, when the story itself begins, any one of the three forms of revenge was the most easily obtained gratification in the world. Juliette Marny, watching for her opportunity, finds it more readily than she desires. The inhuman vow forced upon her as a mere child has lost what little hold it ever had upon her own feeling, for she has found in her victim, first, a chivalrous protector from mob insult, then a kindly friend. Now the story becomes a record of the struggle between her faith to her oath and her gratitude to Déroutède. She betrays him, then makes a supreme sacrifice to undo the betrayal, while he, in his turn, makes counter-sacrifices to save her, and, of course, they are by now fallen fathoms deep in love. The Scarlet Pimpernel reappears from an earlier volume to enact the English dandy rescuer; all the above-mentioned French Terror properties are in ample evidence, and at last there is a happy issue out of all afflictions.

Baroness Orczy's style is of the kind that the old-fashioned novel-reader takes to comfortably; pleasantly dotted with questions addressed to nobody; advancing in a well-bred tone of elaborate leisureliness. It is, in truth, a very fair story of its semi-historic, wholly respectable sort. It may be

captious to find fault with Anne Mie—since this is avowedly a romance—for singing in 1793 "an old ditty," "De ta tige détachée," which was written in 1815 in lament for Napoleon. But we have a right to expect consistency in fiction, however indulgent we may be to fact.

J. P. Dunbar. by William Cadwalader Hudson. New York: B. W. Dodge & Co.

There are books and books, and this one belongs to the latter class. It hears the relation to the book of the library that a trolley car does to a gondola, a telephone to a harp, the broker's ticker to the "Jane! Jane! Jane!" of Rochester. We concede that it is a book, a book which is the logical outcome of the ugly age—conceived seriously, made skilfully, carefully, quite possibly with a purpose.

The especial ugliness it pictures, and pictures with fidelity worthy of a table of weights and measures, is the War of Wall Street. For hero, Mr. Hudson takes a capitalist with a passion for accumulation, a talent for skating on thin ice, and an unaccounted-for hold on a few personal friends. For heroine, there is a lady stock-jobber nurtured on speculation from infancy by a careful father; for lesser lights there are financial magnates and undergraduate investors, with a croaking chorus in the hero's uncle, a man of caustic humor and illusion-dispelling tongue. The hero, early in the book, acquires three millions, a few pages later lays himself open to four or five, progresses to the height of twelvefold millionairehood, then passes into the valley of threatened State's prison, and glanced-at suicide, to emerge triumphant, bride on arm, and goes on, cutting bread and butter. The details of operations on the floor of the Stock Exchange are as minute as real share manipulation, and as picturesque as financial columns of the daily journals; a good Christmas hook for hulls and bears. Holiday shoppers may be grateful for a specimen paragraph:

It is not like Edgar to accept defeat so easily. I am watchful, and yet I am buying. I have hypothecated holdings of 36,000 shares, and bought 30,000 more. These I have hypothecated and with the proceeds bought 25,000. To-day I hold 91,000 shares of Universal, on which I owe \$4,250,000. The present market value is \$7,280,000. They cost me in actual cash payments, \$6,050,000. Before the end of the year they will be worth all of 96 and the price will hold. But were I to sell 47,250 shares, at, say, 90, I could pay my hypothecations and should have left in my hands 43,750 shares, of the value of \$4,200,000.

Which goes to show that it is a story pre-eminently adapted to its lovers.

Patricia at the Inn. By J. C. Snaith. New York: B. W. Dodge & Co.

This is romance founded on fiction, which, in its turn, is based upon what might have been one of the many adventures befalling Charles the Second, after the battle of Worcester, when he was escaping to France, a price upon his head. At an inn on a lonely coast the rascally landlord entertains unawares the King and two of his loyal subjects, man and wife. The vacillation of the Merry Monarch between his safety and his attraction to the Lady Patsy (although he had seen women "younger and more lyrical"), the Stuart witchcraft that held even injured hus-

bands loyal, the cunning escape from the turncoat landlord, whose willingness to betray to the highest bidder led him at last to his horrid deserts, are the main features in a story of perhaps rugged texture than many Stuart tales, but otherwise hardly to be distinguished from the rest of the drops in the Jacobite fiction sea which rolls from pole to pole.

The Face in the Girandole. By William Frederick Dix. New York: Moffat, Yard & Co.

This pretty piece of bookmaking is, as it declares itself, a romance of old furniture. Not sure at first which is to be the principal and which the accessory interest, romance or furniture, the reader is so pleasantly dealt with on both counts as to feel no desire in the end to quarrel with the author for having used his romance to gild his furniture withal; rather, let us say, since gilding would hurt his feelings, he rolls his tables and chairs about on the smooth running casters of a tiny love-story. But for this minute affair of the heart to coax the reader on there might be those who would burst in ignorance of how to tell a Chippendale from a Hepplewhite or him from a Sheraton. It is rather a pity that the girandole which plays the title rôle, should not be faithfully drawn on the cover since the outward dress constitutes so much of the volume.

A Maid in Arcady. By Ralph Henry Barbour. Philadelphia: J. P. Lippincott Co.

This is yet one more of the season's stories which are fitted to be seen quite as much as to be heard. Perhaps even, the fragile little tale is almost overdressed with its lordly garments of wide margins, heavy paper, and its photographs in delicate tints. These, by Frederick J. von Rapp, appear and even reappear in whole pages, as vignettes, tail-pieces, and side garnishes, most charmingly picturing a variety of woodland scenes and two very human figures. The story is graceful and more spirited than one would expect from the emphasis given to its externals.

The Garter Mission to Japan. By Lord Redesdale. New York: The Macmillan Co. \$1.75.

Since the charming personality of the author of that imperishable classic, "Tales of Old Japan," A. B. F. Mitford, was lost in the crowd of British noblemen, he has been little heard of in the literary world, except to reprint in 1900 his papers and letters under the title "The Attaché at Peking." But in all the important functions of the recent celebrations in Tokio of the renewed Anglo-Japanese Alliance, the dignified figure of Lord Redesdale was a centre of attraction. Entering as a young man, in the sixties of the last century, the newly opened country, when Japan was feudal, and imperialism was but a coming shadow discernible only to keen students of history, Lord Redesdale, then Mr. Mitford, student-interpreter at the British legation, collected the now world-famous "Tales." Returning homeward, he became the favorite of sovereigns, held lucrative offices, and emerged into view again when dispatched to carry from King Edward the

paraphernalia of silk, gold, and brilliants of the Order of the Garter.

This book, consisting of matter selected chiefly from Lord Redesdale's letters to his wife, has all the charm of a fairy tale. Rather it is the report of a very much delighted Rip Van Winkle returning to the scene of his former haunts. Despite the tender melancholy which change induces, he enjoyed richly his new experiences. The old world of daimios and feudal processions, of castles in the provinces and clan caravanseries in Yedo, of odd and strange classes, masses, and characters, has been replaced by a new world, which throbs with steam, electricity, machinery, and which has new outlooks and ideals. Instead of the camp city Yedo, is the imperial and modern metropolis of Tokio, and in place of a hermit nation is a world power. Happily the mountains and rivers have not changed. The visitor inquires of the Emperor's generals, fresh from the victorious fields of Manchuria, whether the Mikado's soldiers will fraternize with the men whose fathers were pariahs, when Mitford was young. He finds that though they will fight shoulder to shoulder in the ranks, they will not mess or eat with these sons of the once accursed. Yet as there is no color line in Japan's case, Gen. Kuroki thinks that even this difficulty will disappear in time. To show how the commoners are mounting the spiral pathways of promotion, it is stated that of 668 military cadets, 12 were sons of noblemen, 257 of samurai or the old gentry class, while 299 were from the heimin, or common people.

Throughout the book "it is the sad memories that are most ahiding," yet sad though they might have been to the author, his charm of style makes every page delightful with an autumn-like richness. He hears among the Japanese no boasting over the late war. Of the Emperor he has the true idea, held by all who know the secret of that nation-leader's life—"the strength which was written in his face is his great characteristic"; and of his record he says "never a deed in his public or his private life of which either he or his people can be ashamed." He meets the old Tycoon, who laid down his power in 1868, but is still hale and hearty, with plenty of daughters and bicycles. With such companions as Kuroki, Togo, and Asano, and with sport, travel, and novel experiences with people, country gentlemen, and palace occupants, all told so pleasantly, one must call this little hook a garden of delights.

En Lisant: Réflexions Critiques. Par Léon Blum. Paris: Librairie Ollendorff.

It is seldom that a critic commits himself to a downright statement of his likes and dislikes without reserve or extenuation. To do so is not only to provoke contradiction, but also to furnish too easy a measure of his taste and discrimination. He prefers, if he is experienced and wary, to qualify his opinion with reasons and distinctions; very likely, if he is conscientious as well, he will distrust the accuracy of so bald a statement of preferences. But M. Blum is too frank or too confident to hesitate even for this elementary axiom of critical prudence:

"War and Peace" is the finest (*le plus beau*) novel in existence, finer than "l'Edu-

cation Sentimentale," and for me that means everything. But Tolstol aside, I see two novelists whom I incline to place above our own. One is an Italian, Gabriele d'Annunzio. . . . The other is an Englishman, Thomas Hardy. . . . "Jude the Obscure" of Hardy is one of the most profound, poignant, and original books I know.

After such a statement it will probably be difficult for the English reader to feel any great confidence in M. Léon Blum. And there is, it must be confessed, a good deal in his volume to justify this first impression, hasty as it may seem. M. Blum is intelligent, clever, wide-awake, and amusing enough to put the general run of English reviewers to shame. But like too many of his contemporaries, French and English for that matter, he is so thoroughly immersed in his time as to be incapable of judging it with detachment and impartiality. In spite of the historical method, there has probably never been another period in which the past counted for so little as a standard of comparison for writers and readers alike. As far as M. Blum is concerned, it might just as well be non-existent and literature have begun the day before yesterday. He is thoroughly subjugated by the present, "suhdued to what he works in," and so much so that it appears impossible for him to conceive that the particular momentary current or eddy in which he happens to be caught, may not, after all, be a permanent or even a desirable tendency. Progress he seems to have identified with movement, and is quite content to be in motion, no matter in what direction he may happen to be drifting. In this way he is humanitarian and socialistic by unconscious impulsion and praises Anatole France's recent conversion without measure, and to all appearance without reserve.

Like the great French philosophers of the eighteenth century, with whom posterity will place him, he has shown that special intellectual courage in the following out of a thought to its conclusion, which is one of the purest beauties of humanity. To-day he unites in himself all that is noble in the human spirit. He was a great writer. He is a great man.

And the next moment he is with equal ingenuousness registering his profound admiration for the same writer's unregenerate "Lys Rouge"—that is for what is libertine, neurotic, and individualistic. "And yet if I were forced to indicate what single volume I prefer, I should name 'Lys Rouge.'"

On the whole, however, his conception of fiction, and to some extent of all literature, is, as might be expected of a spirit so thoroughly "current," sociological. Not only is the novel a phenomenon purely social in its origins, but it should apparently devote itself to the discussion and solution of social problems—at all events to the awakening of the social conscience; or in his own rather vague and pompous phrase, it ought "to provoke the sentiment which is the cause and condition of all social reflection." On this ground he objects to foreign subjects, to such "exotic" themes as those of Loti, for example, because they have no "social value" and indeed lack the strict *actualité*, the practical applicability of topics which are thoroughly indigenous. This is, of course, very "scientific," very modern. But does it not, as a matter of fact, introduce a dangerous

prejudice into criticism—a pure *à priori*ism hostile to that spirit of comparison and inference which ought to guide and control the critic?

At the same time, however, all this *parti pris*, this eclecticism, this sensitiveness to every current of air, unsettling as it may be, makes entertaining reading. There is a sprightliness about it, a responsiveness to ideas, which is unfortunately rare in current English criticism. Nor is there lacking the grain of mockery, the slight flavor of disillusion and skepticism necessary to make the dish appetizing for those finer and more sophisticated palates that might fail to relish the other ingredients without some such racy seasoning:

And then, when it will be no longer possible for any one to make a living by writing novels, no one will write had novels any longer to make a living. I confess that I long for that day. It is not that literature will then become an amusement of the wealthy. Not at all. But every one will have a business to live by, and will write, if imperious instinct urges him, in the leisure left him by his business. No one man needs to write so many books, and greater men than we have lived without doing so. Everybody knows that the majority of "literary vocations" to-day are half vanity, half idleness.

The Æneid of Virgil. Translated by E. Fairfax Taylor. With an Introduction and Notes by E. M. Forster. 2 vols. New York: G. P. Putnam's Sons. \$2.

It has been a matter of wonder that no publisher has recently made provision for that respectable body of readers who have no pretensions to classical scholarship, but who would still like to turn over a favorite author with proper assistance. Now it is for just such readers the Dent-Putnam series of Temple Greek and Latin Classics is planned. On one page is the clean text of the author, opposite is a translation (not a "crib," but a literary version), and at the back are notes explanatory of what historical and mythical difficulties may occur. The only criticism we feel inclined to make upon the volumes so far published is that the type is rather small and the binding flimsy. As a compensation, the price is low.

Of the two recent volumes, containing the "Æneid," there is little to say. Mr. Taylor has performed the fairly audacious feat of rendering the whole poem into Spenserian stanzas, managing the intricate rhymes and long-drawn cadences with considerable ease. On the whole, as in the case of Worseley's "Odyssey," this stanza reproduces the movement, and, more particularly, the romantic qualities of the original, better than blank verse or heroic couplets; and in general the English reader seems to be more amenable to a long poem in stanza form than in continuous lines. Instinctively, in testing such a work, one turns first to the famous verses, and a few of these, as specimens of Mr. Taylor's translation, we may give:

Even here
Worth wins her due, and there are tears to flow,
And human hearts to feel for human woe.

'Tis here,
The final end of all the Dardan power,
The last, sad day has come, the inevitable hour.

Ah, child of tears! can'st thou again be free
And burst Fate's cruel bondage, Rome shall know
Her own Marcellus, reappeared in thee.

In all these examples (the last is much the weakest) one sees the fault inevitable in such an attempt—the use of too many words; but it is fair to add that such a weakness is less apparent in reading large tracts of the poem than in these brief excerpts where the original is too importunately present in memory. A fairer test would be to take one of the average passages of narration or description, as, for example, these opening verses of the seventh book:

Thou too, Caleta, dying, to our shore,
Æneas' nurse, hast given a deathless fame,
E'en now thine honor guards it, as of yore,
Still doth thy tomb in great Hesperia frame
Glory—if that be glory—for thy name.
Here good Æneas paid his dues aright,
And raised a mound, and now, as evening came,
Sails forth; the faint winds whisper to the night;
Clear shines the Moon, and tips the trembling
waves with light.

Here, it is first to be observed, that the nine lines of the Spenserian stanza represent exactly nine verses of the original, and even reproduce to some extent the cadence of the Latin. Thus "if that be glory" corresponds in position and tone to "si qua est ea gloria"; and the last clause, "and tips the trembling waves with light," admirably gives the feeling of the Latin, "splendet tremulo sub lumine pontus." To preserve the quality of the original is the hardest and most important task of the translator, and on the whole Mr. Taylor has succeeded here better than any of his predecessors with whom we are acquainted.

Sidelights on the Home Rule Movement. By Sir Robert Anderson. New York: E. P. Dutton & Co. \$3.

"In the course of a country walk with some Irish friends who were not unversed in public affairs," writes Sir Robert Anderson in his introductory chapter, "the Parnell movement and the Special Commission which dealt with the *Times* charges against the Irish leader became the subject of our conversation. Certain remarks of mine led my friends to urge upon me that I should write my reminiscences." It is to be hoped that these intimate friends of Sir Robert Anderson find some usefulness in the book which he has produced; for it will be difficult for most readers who are not of his immediate social or political circle to see any advantage that can result from the publication. It is a book comparable with Fitzpatrick's "Secret Service Under Pitt." It deals with the Irish secret service from the early sixties to the end of the nineteenth century; but it has none of the value of Fitzpatrick's book, because while Fitzpatrick bases his work on documentary evidence, there is scarcely a page of documentary evidence in these "Sidelights on the Home Rule Movement." In many instances there is no authority for the statements that are made except the *ipse dixit* of Sir Robert Anderson, who on almost every page gives the impression that he is a man of enormous conceit and of some disagreeable characteristics—in fact, just the type of Irishman who might be expected in the underground service in which he was so long engaged. Sir Robert Anderson is a Unionist of the Ulster school, and as bitter towards all Home Rulers as the bitterest of Ulster Tories. Nevertheless, he has done a service for the Home Rule cause by making good the long-

standing complaints of the Nationalists as to the kind of Irishmen who can count on promotion when once on the pay roll of Dublin Castle.

Drama.

"*A Game at Love,*" and *Other Plays.* By George Sylvester Viereck. New York: Brentano.

Not long ago, Mr. Viereck, while still in boyhood, attracted serious and favorable attention by his "Gedichte," a volume of poems in German and English, remarkable for melody, imagery, eloquence, and paganistic spirit. His most fervent admirers compared him with Catullus, Swinburne and—a much more dubious compliment—Oscar Wilde. He now publishes a series of short prose dramatic studies under the quoted title which are marked by similar characteristics. In a brief preface, he says that "they point out no moral, they teach no lesson, and the reader may feel assured that the obvious interpretation is in no case the author's own." This disclaimer is prudent, for no sane or healthy person could endure to be suspected of entertaining the theories professed in them; but why put such matter into print? Of the six subjects treated, four are simply the inspirations of a perverted eroticism, suggestive of a lamentable precocity in vicious knowledge, if not in degrading experience, and of a contempt for all the restrictions which prevent human society from relapsing into barbaric animalism. The fact that these ideas are disguised, in a literary form of uncommon grace and seductiveness, and with an affectation of philosophic purpose, does not render them less foolish or abominable. The last two pieces, grouped under the single title, "The Butterfly," are cast in the shape of the old moralities, and are happily free from taint, although, like the others, they enforce no moral and teach no lesson. In the one, a righteous man, dying, curses the folly that kept him from indulging in the pleasant sins, whose roseate visions haunt his pillow; in the other, an unrighteous man, with his last breath, finds the sweet memories of forbidden pleasures turning to gall and bitterness. Both scenes are depicted with eloquence and imaginative power, but are full of a dreary pessimism, unrelieved by hint of the higher thinking of which the older pagans set an example for the modern imitators.

What Mr. Viereck may achieve in the future, if ever his rankly luxuriant boyish fancies acquire the ballast of solid learning and common sense, it would be hazardous to predict. At present, he is devoting precious gifts to futile and unworthy ends.

Heinrich Conried, manager of the Metropolitan Opera House, has been chosen general administrator of the New Theatre, founded by a number of wealthy men, and to be erected in Central Park West, between Sixty-second and Sixty-third Streets. Mr. Conried is to have for his assistant a Frenchman to superintend the production of *opéra comique*, and either an Englishman or an American to superintend the productions of drama. The announcement is further made that "on account of the 'purely artistic and non-commercial' spirit of the enterprise, Mr. Conried will serve

without salary and without sharing in the profits of the enterprise."

"The Needle's Eye" is the name of a new play written by Rudolf Besier, author of "The Virgin Goddess," which achieved so great an artistic success at the London Adelphi Theatre. This latest venture is a modern play in three acts, and the text is, "What would happen to a man of Socialist ideas were he suddenly endowed with an ample fortune?" The central figure of the play is the son of a wealthy colliery owner, who has watched his father crush the tired workers, and, watching, has become a Socialist.

"Les Mouettes" of Paul Adam was the most noteworthy new piece of November at the Comédie Française. The title ("Seagulls") is in the metaphor which, in the mouth of the heroine, winds up the play: "Oh, Monsieur Cbambalot, there are seagulls that you wound, and yet they take their flight toward the sea, toward the sun." Her Christian spirit has won back the husband whom Chambalot's Nietzscheism had almost persuaded to be a superman and sacrifice his wife to his own lawless desire. The story of the play was told in the author's romance of last year, "Le Serpent Noir"; the play is easier reading, though a trifle recondite, even for the intellectual public of the Théâtre Français.

Music.

Giacomo Puccini. By Wakeling Dry. John Lane Co. \$1.

The Heart of Music. By Anna Alice Chapin. Dodd, Mead & Co. \$1.60 net.

Puccini is operatically the man of the moment, in England and America even more than in Italy. When his latest opera, "Madam Butterfly," failed in Milan, London came to the rescue, giving it a welcome which created a sensation and helped to make it the biggest operatic success of the new century. In New York it will have had, by the end of this week, fifty consecutive performances in English. Later, it will be produced in Italian at the Metropolitan Opera House, with Geraldine Farrar and Caruso. One phase of the grand-opera war is that Mr. Conried of the Metropolitan claims to have the exclusive American rights to all the Puccini operas in the original tongue—a claim which Mr. Hammerstein of the Manhattan is contesting in the courts. In January the composer himself is to visit America, to attend a sort of festival performance of four of his operas at the Metropolitan.

Obviously Mr. Dry could not have chosen a more opportune moment for launching his little book on Puccini—the first in any language. He has enjoyed special advantages, having repeatedly met the composer, whom he describes as "a big, broad man, with a frank, open countenance, dark kindly eyes, of a lazy lustrous depth, and a shy, retiring manner." Of pictures, there are no fewer than seventeen in this little volume of 114 pages, besides four facsimiles of manuscript scores—extraordinary scrawls and blotches which would have baffled even such lightning score-readers as Liszt or Saint-Saëns. Puccini is here pictured in his study, in peasant costume,

shooting ducks at Torre del Lago, snowballing in Sicily, descending Etna on a mule, and in diverse other fashions. The author supplies plenty of gossip about his habits, his fondness for the chase and sport, his travels, his method of working, his preferences and opinions. His last three operas have made him rich, and he has built an elegant lake-shore villa on the secluded Torre del Lago, near Lucca, which empties into the sea at the spot where Shelley's body was washed ashore and afterwards burned.

It is but historic justice that Puccini should now be the most prominent composer of the new Italian school, for it was he who founded it. Mr. Dry refers to this briefly:

With his first opera, Puccini started something of a new form in the short opera; and two remarkable works of the kind in "Cavalleria Rusticana," by Mascagni, and "I Pagliacci," by Leoncavallo, which came very soon after, clearly indicate that he had founded a school, as it were.

This fact was worth dwelling on with greater emphasis and detail; for Mascagni, a mere imitator, has generally been regarded as the founder of the new school. But it is perhaps no great honor to be the founder of this particular school, as it has not yet done anything of lasting value. We doubt whether Puccini has, as his biographer claims, made for himself "a distinct place in the history of the progress and development of the art and science of music-making." He has made his orchestral scores more interesting than those of most Italians, without, however, in the least equalling Verdi. For that, his faculty of melodic invention is too weak. Nor can we discover the "spontaneous vocal melody" with which Mr. Dry credits him. The real secret of his success lies in two things—his selecting popular plays as basis for his librettos, and his writing effectively for singers. Other Italian composers before him—Rossini, Donizetti, and Bellini—owed their vogue largely to their skill in catering to the great singers; but each of these had a much more original melodic vein than Puccini.

Miss Chapin's book on the violin does not purport to be more than a gossipy Christmas book for lovers of that instrument. She confesses that she is "violin-mad," and her pages are certainly aglow with the ardor of an enthusiast. She has read much and wisely for her special purpose, diving into deep seas of research and bringing up an occasional pearl that interests even experts. It is not only the history of the violin, as we know it, that is traced; much is said, too, about its ancestors and relatives in various countries, beginning with the humble locust, which is a true fiddler. After visiting Egypt, Assyria, Greece, Rome, and China, Miss Chapin takes her readers through the dark ages and Troubadour days to the great makers of lutes, viols, and the perfected modern instrument. Her book is good of its kind, replete with curious information, and well written.

Never before has New York had so many performances of grand opera as this winter. While Henry Savage remains at the Garden Theatre with his English version of "Madam Butterfly," there are sixteen a week altogether. At the Metropolitan

repetitions have ruled since our last record, the only first performance being "Lucia," in which Sembrich and Caruso achieved their usual triumph. The audiences at this house have not been affected in the least, as regards numbers, by the opening of a rival theatre. At the Manhattan Opera House Bonci has become such a favorite that it is only when he sings that the attendance is numerous. Thus, "Don Giovanni" was heard by many more than "Carmen," although Bizet's opera, without Bonci, was much more enjoyable than Mozart's with him. Not that he himself was wanting; on the contrary, he proved to be an almost ideal Mozart singer; but the important feminine rôles were unsatisfactory, with the exception of Zerlina. The hero of the occasion was the conductor, Mr. Campanini, to whom also was chiefly due a remarkably good ensemble in the notable performance of "Carmen." This aroused unbounded enthusiasm, though there were no vocalists of the first rank in it. The advent of a conductor who, like Mr. Campanini, has discovered the subtlest secrets of German and French as well as of Italian operatic score, is an event of the first importance in our musical world. The Saturday evening repetition of "Carmen," at popular prices, drew an audience which filled the house.

Wassily Safonoff will present himself as an interpreter of Wagner's music at the next two concerts of the Philharmonic Society, Friday afternoon and Saturday evening at Carnegie Hall. Among the numbers selected are the overture to "Tannhäuser," Siegmund's love song, the introduction to the third act of "Meistersinger," and "The Ride of the Valkyries." Aloys Burgstaller, the popular Wagnerian tenor, will make his first appearance in New York this year in these Wagner excerpts.

Art.

Noteworthy Paintings in American Private Collections. Edited by John LaFarge and August F. Jacacci. Vol. I., large folio. New York: The August F. Jacacci Company. \$1,000 a volume.

This massive and beautifully made folio is the earnest of a unique enterprise. The editors, John LaFarge and August F. Jacacci, offer it as the first of a series to include all noteworthy pictures in American private possessions. They have tried—and we feel have succeeded—to make the book a standard of typographical beauty, and its contents a model of modern processes of photo-engraving and contemporary criticism and connoisseurship. The volume, of which one hundred and twenty-one copies are offered for sale, is necessarily expensive, appealing chiefly to the class whose pictures are its topic. But it has absolutely nothing of the claptrap *édition de luxe*. The page is 15x20 inches, the presswork admirably done by the Gilliss Press; the ornamental head-pieces are designed by Kenyon Cox, taking his inspiration from the "Hypneratomachia," and cut in wood by Henry Wolf; the photogravures are of uncommon excellence, being

made by John Andrew & Son. In bindings there is a choice between a morocco cover in the early French taste, designed by John LaFarge, and an embossed vellum cover adapted from an Aldus binding by Kenyon Cox; the latter seems the more appropriate to the massiveness of the book itself. Over every detail of bookmaking the most scrupulous care has presided. To mention but an incident, the page of text opposite each photogravure is ruled in black to the measure of the print, and the descriptive note arranged to fill the ruled space to the eye. Thus a balance between text and illustration is created, and the disagreeable, spotty effect of the average large book of plates entirely avoided. Indeed, the great folio is so well done in every way that, despite its cost, a bibliophile might well buy it, as he does the Kelmscott Chaucer or the Montaigne of the Riverside Press.

It is a thoroughly serious work, too, so far as the text is concerned. Mr. LaFarge, in a general introduction, suggests the human interests involved. In America, as in Rome of the Augustan age, we see the sudden aspiration of wealth towards the larger life typified by art—an attempt of financial prowess, often, to take a kingdom of the mind by storm. Short of so violent a proceeding, the earliest collecting of fine works of art constitutes a landmark in the history of a nation's culture. Mr. LaFarge, whose implications we have followed rather than his statements, justly points out how valuable would be a record of, say, the first Roman collections. Speaking of our American case, he says:

It might be important, and it certainly would be very interesting, to note the forms of these collections or gatherings at the moment of their first taking shape. Later, the possible changes of manner of life, the displacements of fortune or of inheritance are likely to alter these conditions and to make these collections lose their personal character, to destroy the record of first origins, and to mass all together in a more commonplace appearance.

Coming more narrowly to the subject of the present volume, no one can question the personal, almost romantic, interest of such collections as Mrs. John L. Gardner's, in her Venetian gallery at Boston; the late John Hay's, in the house that Richardson built for him at Washington; the remarkable ingathering of Impressionist canvases at A. A. Pope's country-place near Farmington, Conn. Such things are documentary, and deserve to be commemorated. The editors have planned their work in the following novel manner: Each collection is described in an essay of a general sort which carries also a kind of running catalogue of selected pictures. Thus Mr. LaFarge characterizes the Gardner collection; Kenyon Cox the A. A. Pope collection and that of A. A. Sprague at Chicago; Samuel Isham treats the H. L. Terrell collection at New York; and Sir Martin Conway that of the late John Hay. These essays are interspersed by photogravures, with a succinct note, historical and descriptive, on the opposite page. For the essays, it will be noted, American writers have been chosen, as most fully understanding the motives that underlie these collections. Sir Martin Conway can hardly be called an exception, his travels and associations fully en-

titling him to a sort of honorary citizenship among us.

When we approach the critical portion of the volume, however, the work becomes cosmopolitan with a vengeance. A certain number of pictures are the subject of short critical essays by many hands. For example, Mrs. Gardner's splendid Titian, "The Rape of Europa," formerly at Cobham, Kent, receives a fourfold elucidation. Georges Lafenestre, the veteran biographer of Titian, dwells upon the history of this famous canvas; Georg Gronau notes its contemporary popularity as evinced by copies and imitations; Roger E. Fry discusses the æsthetic balance of the composition, and C. Lewis Hind analyzes the color schemes from a painter's point of view. Such essays really supplement each other and enrich the total impression. To bring them into converging relations must have cost the editors infinite labor and tact. For a more modern instance we may take Daumier's "Les Avocats" in the Pope collection. D. S. MacColl takes it as an example of "caricature drawing," of that emphasis which lies near the roots of art itself; Arsène Alexandre contributes interesting personal reminiscences of the painter; Royal Cortissoz dwells upon the technical side of Daumier's draughtsmanship—its tangibility and ponderosity; finally, Camille Mauclair remarks upon the seeming paradox of a caricaturist in possession of the grand style.

Enough has been said to illustrate a feature of the work questionable *à priori*, but actually most interesting and valuable. These groups of short essays on great pictures form a record of the best contemporary opinion on matters of art such as has never before been attempted. And this ambitious scheme has been carried through with notable success. The connoisseurs and critics of England, France, Italy, Germany, the Low Countries, and America have given more than a perfunctory adherence. They are represented *en masse* and often by their best work. The result is such a concentration of the best opinions of the art-loving world of to-day as posterity will perhaps know better how to value than we. Only imagine how a similar anthology from Lorenzo's Florence or even from Louis XIV.'s Paris would be welcomed by the student of this year of grace!

One is tempted to enumerate the contributors—men of the stamp of Herbert P. Horne, Sir Walter Armstrong, André Michel, Drs. Bode, Bredius, and Friedländer, not to mention Frizzoni, Ricci, Venturi, and others as notable—but it is simpler to say that either by its advice or its actual contributions practically all of modern connoisseurship and criticism is here represented. Apart from these famous names the editors have been fortunate in getting excellent papers from less prominent contributors. Such a note as that of Marcia Oakes Woodhury on Whistler's "Blue Wave" is a valuable bit of criticism, illustrating a "possession by the subject" that is at once psychologically true and rare in a conscious artist of Whistler's sort. The humane side of antiquarianism appears in such a note as Gustav Glück's on Van Dyck's "Virgin and St. Catherine," in the Sprague collection. It appears that this is the replica which

was brought to England in 1631, only to be repudiated by its painter as a "copy." In the ensuing discussion Rubens authenticated it as a consummate work of his best pupil. Everywhere the book is easy to read, and since it will be given to several public libraries, its educational import merits the attention we have paid to it. In this connection we should mention the bibliography in double columns, which is furnished as a companion volume. It is purposely kept apart from the book in order that additions may readily be made. It is very much more than a bibliography, containing with slight condensation extracts from all writing respecting each picture—from the sales catalogues, through the special journals, to the general literature of the subject. Such a bibliography is truly a variorum commentary on the finest paintings in America, and we wish it might be published in popular form. Our notice may well close with this appanage of a work throughout characterized by the same taste, scholarship, and breadth of view.

One of the most important reforms proposed by Corrado Ricci, recently appointed general director of antiquities and fine arts in Italy, is the reorganization of the so-called *Uffici regionali per la conservazione dei monumenti*, or local societies for the preservation of ancient monuments and objects of art. Already the budget for this purpose has been considerably increased, so that we may soon see results. More men will be appointed to do the work, and only the best young archæologists and art historians of the country will be chosen. A scientific inventory of all objects of art and monuments is to be published. An illustrated monthly bulletin, called *Bullettino delle belle arti*, is to be issued by the Ministry, giving news of all new finds and of accessions to the various Italian museums and galleries; of this the first number is to appear in January. Moreover, in the near future a new law for the protection of antiquities and objects of art is to be laid before Parliament.

The archæologist F. Noack, supported by the German Archæological Institute, has made an investigation of the city wall of Athens. The work was begun at the Dipy-lon. The Athenian branch of the Institute has issued the following provisional report on the results of this examination:

The original foundation consists of limestone blocks, which must have belonged to an older building. At two different places in the wall were found pieces of two archaic grave-reliefs, which were at once separated from the wall. Of one relief only the upper part is preserved, showing the top of a head, but on the other is represented a youth, standing with a lowered spear in his left hand. In style it resembles the famous disk-thrower. Beneath the youth is a flying Gorgon. In two other places marble blocks were discovered, one with a scarcely distinguishable figure of Hermes of archaic type. These finds thoroughly confirm what Thucydides says about the walls built by Themistocles, and what other evidence has already pointed to—that they were erected in great haste, and that parts of older constructions were used as building material.

The National Society of Craftsmen is holding through December its first annual exhibition in the National Arts Club, of this city. The exhibits are various, including carved wood, weaving, lace, jewelry, and artistic work in silver, work in copper and

bronze colored plaster, porcelain pottery, and leather.

In the galleries of the same club also an exhibition of hooks and hookbindings, representing the output of various publishing houses, hook-hinderies, and individual binders, is now on view. The bindings include the pictorial cloth covers of current fiction and other hooks, and finely tooled and decorated leather work. The leather bindings are as a rule of excellent workmanship and design.

An exhibition of water colors by members of the Salmagundi Club of this city is to be open in the clubhouse, No. 14 West Twelfth Street, till December 22. The pictures include good work and had, but the average is rather higher than in some of the club's previous exhibitions. Many of the pictures have already been exhibited elsewhere. The Alexander C. Morgan prize was awarded to "The Henna Market," by Arthur Schneider. Among the exhibits worthy of note are pictures by C. C. Cooper, Robert David Gauley, Gifford Beal, M. Petersen, W. Ritschel, C. Myles Collier, J. Lauher, M. Fromkes, Charles Warren Eaton, Addison T. Millar, F. Luis Mora, Genjiro Yeto, P. Schmaus, P. McIntosh Arnold, A. R. Freedlander, Harry Roseland, W. H. Drake, Cullen Yates, James H. Moser, R. F. Bloodgood, Will S. Robinson, and C. W. Furlong.

An exhibition of oils, pastels, and etchings by Mary Cassatt is now open at the Durand-Ruel gallery in this city. These pictures, many of which have been seen before, include early and recent work, and record the steps by which this American artist assimilated the spirit and methods of the French impressionists. The work is French through and through, and through and through, equally, it is the personal expression of Miss Cassatt, who, during long years of residence in France, has made herself a part of what she saw there. Her interest is supremely in babies and young mothers. She paints them lovingly, but without sentimentality. The technique of this work is not always impeccable, but the expressions are always fresh and real.

Charles Caryl Coleman is holding an exhibition of pastels and oil paintings at Noé's gallery, open until December 22. The pastels have a lyric delicacy which justifies the title the artist has given them, "Songs of Vesuvius." They are pictures of the eruption of Vesuvius last spring, as seen from Mr. Coleman's studio on the island of Capri.

The Art Association of Montreal is holding a loan exhibition of examples of Rembrandt's work, and of the work of his Dutch contemporaries.

A feature of the Irish International Exhibition, to be held next year in Dublin, will be the collection of modern pictures and sculpture which A. G. Temple is organizing with the help of Sir Charles Holroyd, Lionel Cust, Whitworth Wallis, and other experts. The exhibition will be representative of all the modern schools of art, Continental as well as British, and will be the most important held in Ireland since that of 1853, out of which the National Gallery of Ireland took its rise.

Ernst Josephson, the Swedish painter-poet, who died at Stockholm November 22,

might in some ways have been the model of Osvald in Ibsen's "Ghosts." He belonged to the group of young Swedish impressionists who revolted against the tutelage of the Royal Academy of Free Arts at Stockholm and turned to France for a wider and more authentic inspiration. Together with Carl Larson, Björck, Nordström, Pauli, and others of less note, he headed the secession which, in the eighties, rent the Swedish art world as, still later, that of Germany was divided. By a series of paintings combining rare mastery of color and line with poetry of thought Josephson established a reputation not only in his native country, but in France, England, and Germany as well. Then from being a reveller in sunshine and the joy of life, he grew melancholy and brooding. The signs of the change became first evident in three collections of poetry which he published, the most highly valued bearing the title "Black Roses." His poetry was not less exquisite than his work with the brush, but it was even more morbid than "The Neck" and other specimens of the latest period of his career as painter. At last the catastrophe came, and for the closing eighteen years of his life he remained confined to an asylum.

At an auction at Christie's in London, on December 1, the following prices were paid for paintings: De Hooghe, An Interior, with two gentlemen playing and singing, £189; Rubens, "Atalanta," £105; J. Ruysdael, Landscape, £183; G. Terburg, A Lady, in yellow jacket with black hood, £304; Watteau, A Fête Champêtre, £241; D. Teniers, Card-Players, £210; W. van de Velde, A Sea-Piece, £117; F. Hals, A Man, in brown dress, playing a flute, £1,575; Romney, Head of Lady Hamilton, £252; D. van Delen, The Interior of a Palace, with a party of cavaliers and ladies, £157; Le Brun, Portrait of a Lady, in gray dress, £131; S. Ruysdael, A River Scene, £252; F. Boucher, A Shepherd and Shepherdess, £136; J. Cornelisz, The Madonna and Child Enthroned, £168; G. David, St. Ambrose, £126; Giorgione, Head of a Youth, £120; Van Romerswale, "The Misers," £131. The same firm sold on December 4 the following engravings: After Lawrence: Lady Peel, by S. Cousins, £26; Miss Farren, by Bartolozzi, £63. After Roslin: Empress Marie Christine, by Bartolozzi, £30. After Reynolds: Mrs. Sheridan as St. Cecilia, by W. Dickinson, £31; Lady Caroline Montagu, by J. R. Smith, £37; The Ladies Waldegrave, by V. Green, £71; Hon. Miss Bingham, by Bartolozzi, £58; Mrs. Williams Hope, of Amsterdam, by C. Hodges, £61; Lady Jane Halliday, by V. Green, £48; Lady Louisa Manners, by the same, £105; Master Crewe as Henry VIII., by J. R. Smith, £39. After Constable: Salisbury Cathedral, by D. Ducas, £43. After J. R. Smith: "Retirement," by W. Ward, £43. After Romney: Edmund Burke, by J. Jones, £29; Lady Hamilton as the Spinster, by T. Chesman, £28. After Coates: Frances, Lady Bridges, by J. Watson, £26. After Lely: James, Duke of Monmouth, by Blooteling, £80. After Gainsborough: Mrs. Elliot, by J. Dean, £60; Signora Bacelli, by J. Jones, £71. After Hoppner: The Setting Sun (The Godsal Children), by J. Young, £110. After Huet Villiers; Mrs. Q., by W. Blake, £31. After Morland: Guinea-Pigs and Dancing Dogs, by T. Gaugain (a pair), £126; The Farmer's Door, by B.

Duterrau, £54. After Gardner: A Child with Flowers, by J. Baldrey, £31.

The art collection of Alexandre Blanc was offered at auction in Paris at the Galerie Georges Petit on December 3 and 4. There were seventy-eight pictures by Jongkind. The highest price for his work was 14,000 fr., given for *Crépuscule d'Été au bord de la Merwede à Dordrecht*, 14,000 fr.; two other pieces brought 10,000 fr. each—a view of the Meuse near Rotterdam, and *La Partie de Patinage*.

Science.

PRIMITIVE MAN IN NEBRASKA.

LINCOLN, Neb., December 15.

The human remains discovered near Omaha by Robert F. Gilder and reported briefly in the *Nation* of November 1 (p. 380), have been the object of careful investigation during the intervening time both by local students and by scientists from other parts of the country. These criticisms have served to bring out the great importance of the find and to establish an even greater antiquity for the remains than was held at first. Prof. Edwin Hinckley Barbour and his assistants in geology in the University of Nebraska have made an extended and minute examination of the locality. It is the top of a loess hill some 200 feet above the Missouri River; and it presents 150 feet of typical, undisturbed loess formation. The bones from the upper level came from an intrusive burial and were surrounded by a mixture of loess and surface soil. They are clearly very much younger than the hill itself.

The other remains are scattered widely through the loess and evidently were deposited with it. Abundant evidence has been obtained in detail of their transport by water and deposit in fragments as the loess was being laid down. As these bones are thus shown to be synchronous with the formation, they antedate the hill, and the two series of remains are associated purely by accident.

These facts indicate the existence of man on this continent before the formation of the loess. It is well known that not only the method of deposit of the loess but also its age are at present matters of sharp controversy. This discovery goes far to disprove the view that the loess is an æolian deposit and to establish it as aqueous.

Furthermore all previous evidence of the occurrence of human remains in the loess has been rejected as incomplete. The evidence accumulated in this case cannot be set aside in such manner; and even supposing this hill to be of the latest date assigned by any one to the loess formation, the earliest record of man in North America which it would seem to establish antedates by far any yet accepted in connection with other discoveries. It places man on an equal footing geologically with the most primitive records of the European continent.

Side-Lights on Astronomy and Kindred Fields of Popular Science: Essays and Addresses. By Simon Newcomb. New York: Harper & Brothers. \$2 net.

Simon Newcomb is not only the most

eminent astronomer now living, according to the judgment of the French Academy, expressed in making him one of its five carefully selected Foreign Associates, a judgment supported by the opinion of the scientific world, but he is also a remarkable reasoner; and a good dozen of the twenty-one chapters of the present volume afford valuable lessons in *logica utens*. In addition to that, he has, for a scientific man, a surprising command of language, not of phrases *recherchées*, but of that eloquence which comes from turning the tap of thoroughly filtered thought and allowing it to run crystal-clear and copious. His "Reminiscences" show (unconsciously, no doubt) how well adapted the circumstances of his boyhood were to making him a conversationalist; and this volume is conversational, in the sense of being at once light and serious. It would be hard to find a serious book more entertaining, or a light book that affords better exercise in reasoning.

Perhaps it is a critic's perversity that disposes us to note the kind of reflections that so distinguished a mind either overlooks or suppresses. In a chapter on the "World's Debt to Astronomy," after showing how valuable the services of that science have been to navigation, surveying, and geography, the author very truly says that, great as that debt is, man owes less to the stars on that score than for the tremendous message of their awesome reality. Very true; but does the science of astronomy add to that lesson more than it deducts from it? Professor Newcomb will hardly contend that lying on one's back of a summer night contemplating the poetry of the heavens is science; and if Goethe was right, the scientific view is that the smallest smoke-ring is, in itself considered, as vast and as sublime as the Galaxy. The lesson of devoutness seems to have put the veritably greatest debt of man to astronomy quite out of the head that should be the last to forget it. For Professor Newcomb ought, at any rate, to have mentioned that in the common view it was astronomy that actually taught men to reason scientifically.

The volume is divided into a smaller part discussing those questions in which the astronomer almost becomes a metaphysician, and a larger part devoted mostly to consideration of the methods of astronomical and other scientific research. The smaller part, in accordance with the turn of the author's genius, seems to have received more of his care. It is true that he has discussed such questions as the limits of the universe with more elaboration in another book; but the presentation here is captivating. We confess we cannot understand how the promise of the preface, conveyed in the words, "it became incumbent to do what he [the author] could . . . by revising the material and bringing it up to date," can be reconciled with a number of statements in the larger fraction of the volume. For instance, on p. 213, we are given to understand that the computations of the American "Ephemeris," so far as they concern Venus, are derived from the tables of Dr. George W. Hill, and so far as they relate to Mars, Jupiter, and Saturn from old tables corrected on account of

more recent observations. But every recent volume of the almanac in question states that the places of Venus and Mars are derived from Newcomb's own tables, and those of Jupiter and Saturn from Hill's.

The most valuable chapters are those in which Professor Newcomb definitely limits himself to the needs of science at the present day and in this country. He repeatedly alludes with great force to the disadvantages of personal isolation, from which investigators in this country have often suffered. Think of the momentous consequences to science of that little accidental chat between De Vries and van't Hof, which led to the proof of ionization and to much else. Professor Newcomb sanely preaches a greater consolidation and unification of scientific research. He rightly says that this need not stand at all in the way of the individualism which is also requisite.

If we have conveyed the idea that the book deals wholly with generalizations and generalities, we beg to say that such an impression would be entirely false. The interest is largely derived from its explanations of details; and some of the chapters are almost entirely of such matter. The whole process of making an astronomical objective, according to Alvan Clark's method, is described, with prices, etc.; and in other chapters there are details, though not always the very latest items. But the work is not a treatise; it is a collection of addresses and of magazine articles, and as such treats mainly of broad questions. The dress of the work is most agreeable. The uncut folds of the paper are at the bottoms of the leaves, which are gilt at the top, thus preserving the volume from dust.

"A Text-Book of Fungi," by George Masee (London: Duckworth & Co.), gives a succinct account of this marvellous group of plants. Mr. Masee is the principal assistant in charge of cryptogams at the herbarium of the Royal Botanic Garden, Kew, and is well known as the author of other works on fungi. Our cryptogams, or flowerless plants, comprise far more types of structure than do all of our flowering plants taken together. Of these flowerless plants the fungi rank among the most difficult objects of study. Considerable diversity exists among the investigators of fungi as to the true relationships of many of the groups, and hence it would not be possible for any one student to prepare a text-book which could prove wholly satisfactory to all of his associates. Mr. Masee has not accomplished the impossible. But he has presented to general botanists a handy work of reference which is likely to prove useful. He has given, moreover, an interesting account of certain biological relations of fungi, such as their luminosity, their sensitiveness to chemical agents, etc., and he has dealt at considerable length with the very puzzling subject of hologic forms. Mr. Masee's reference to one of our American investigators is well worth quoting. Speaking of a large group of minute fungi, the Laboulbeniaceæ, the author says, p. 307:

Our knowledge of this group is, with the exception of some few misinterpreted European specimens, entirely due to the admir-

able investigations of one person, Dr. R. Thaxter of Harvard University.

Some time ago the Mercers' Company gave a considerable sum of money to University College, London, in aid of the department of physiology. This has led to the establishment of a course of lectures in which the researches of the department are to be made more widely known. The first series of ten lectures given last year by Prof. E. H. Starling has now appeared in print (W. T. Keener, Chicago). They treat of "Recent Advances in the Physiology of Digestion," including a chapter on the newer knowledge of the movements of the intestine. Naturally much stress, perhaps a little too much, is laid upon the work done at University College, but the subject is presented with much clearness and such simplicity that the general reader, with a very moderate knowledge of the subject, may follow the lectures without difficulty and obtain a good view of the remarkable changes now developing in our ideas concerning ferments and their action.

In the summer of 1905 Prof. William H. Pickering of Harvard made a trip to the Hawaiian Islands for the purpose of studying their volcanic features with special reference to comparison with craters on the moon. The results of his observations were presented to the American Academy early in 1906, and this report now comes as a memoir of that institution, illustrated by thirty-nine plates, representing terrestrial and lunar features. The Hawaiian Islands exhibit an entirely different class of phenomena from those of our more frequently visited and studied volcanic regions; and in some respects they bear striking resemblances to those upon our satellite. Our best-known craters are of what is known as the explosive type—as Vesuvius and Krakatoa. None of this sort appear upon the moon, but only what may be termed in distinction the engulfment type. Of this variety Hawaii offers many examples, showing little steam, often without exterior cones, and enlarging their craters quietly by the cracking off and falling in of their walls. Although considering lunar craters, these island volcanoes are on a very small scale, the likeness is striking. A comparison of Kilauea Iki with the lunar Clavius seems to give indirect evidence of the existence of lava cones as the source of "streams" upon the moon. Final suggestions as to the similarity of valleys behind Honolulu (as seen from Tantalus) and those on the central peak of the lunar Eratosthenes and Copernicus are suggestive as implying erosion in both cases.

Finance.

NEW BORROWINGS BY THE RAILWAYS.

Traditionally, a tight money market is a bad time for great corporations to issue new stocks or bonds. Subscribers for the bulk of such issues are likely to borrow the greater part of the money, because few capitalists keep large sums available for a sudden call. But if, as has been the case this week, borrowers must pay 15 or 25 per cent. per annum for Wall Street demand loans, and 7 to 10 per cent., allowing for the so-called "commission," for loans running one to five months, there is

little inducement to borrow on such terms and invest in new securities, even with a high dividend. Moreover, if the capitalist has outstanding, in demand loans of his own, money which could be utilized for the investment, he is apt to keep it out on loan. Such a situation, in a shape acutely embarrassing, arose in the summer of 1903, when the "rich men's panic" made money for new investments almost non-procurable, and when, nevertheless, a dozen great corporations had already committed themselves to expensive schemes for which they had to raise funds.

On that occasion, railways which had prepared for issue hundreds of millions in 4 per cent. bonds, designed to be sold at par or thereabouts, were driven to the humiliating recourse of borrowing in Europe, on six months or one year notes-of-hand, at 6 per cent. or higher. When money began to grow tight this season, a number of important railways were in the same position. They were preparing to issue, not bonds, as in 1903, but stocks—an interesting change of policy, which shows how a corporation adapts itself to the prevailing fashion. During the famous Stock Exchange "boom" of 1901, when shares of all kinds of companies seemed to have no limit set to their advance, new stocks were, in the language of another industry, "all the rage." In 1900, there were "listed" on the New York Stock Exchange, \$443,700,000 new bonds and \$620,900,000 new stocks. In 1901, the new bond listings were \$923,000,000, and the new stocks \$1,642,000,000. After the collapse of the market, May 9, 1901, the craze abated; after the prolonged decline in stocks during 1903, the public's taste abruptly changed. In 1904, only \$175,800,000 stocks were listed, as against \$535,000,000 bonds. Even last year, listing of bonds exceeded by \$446,000,000 that of stocks. With 1906, and its persistent increase in price of stocks, the public is deemed once more in a mood for stocks.

But whether stocks or bonds, the market for new securities, for the reasons already set forth, was at the beginning of the present season precarious. To ask for \$250,000,000 new capital—which was the sum required by three railways alone—and to ask for subscription on the spot, was out of the question. The money, however, had to be assured; not less, according to common belief, because legislation hostile to certain practices of borrowing railways was expected when the Western State legislatures should convene next month. The solving of this problem introduced another new contrivance in security issues, namely, the extension of payment by instalments, the last of which would not fall due for two years or more. The plan may have been suggested by last April's \$440,000,000 loan raised by the Russian Government, of which the final instalment (\$88,000,000) will not be paid until next February, when another Russian loan will probably be upon the carpet.

Last week, the Northern Pacific Railway announced a new stock issue of \$95,000,000; of which subscribers were to pay 5 per cent. next February, 7½ per cent. next April, and 12½ per cent. each at the opening of January, April, July, and October, 1908, and January, 1909. Great Northern followed with an offer of \$60,000,000 stock, to be paid

for at intervals extending from January, 1907, to April, 1908. This week the Chicago, Milwaukee and St. Paul followed with an offer of \$100,000,000, the payments beginning with \$10,000,000 this month and ending with \$15,000,000 on March 1, 1909. The St. Paul's quick call for ten millions, in the face of this month's extremely disordered money market, excited angry criticism; nor indeed did the profitable subscription privileges offered to existing shareholders make the arrangements popular. Shareholders have the right to subscribe *pro rata* to these new stocks at par, and as Northern Pacific stock at the time the new issue was announced, was selling at 224, Great Northern at 231, and St. Paul at 199, an apparently great profit would accrue to them.

But the mass of investors have never reasoned out, satisfactorily to themselves, just what the net result of such bargains is, when the "rights" have been anticipated by an extravagant rise in the price of the old stock, and when the true value of the shares is certain to be affected by so enormous an increase in the amount outstanding. The experience of the Pennsylvania Railroad in 1903 may have made the market uneasy. At that time, when Pennsylvania had been selling at 151, the railway offered \$75,000,000 new stock to shareholders at 120; but the old stock broke to 118½ before the subscription day arrived. At all events, since the several announcements, Northern Pacific stock has declined 24 points, Great Northern 31, and St. Paul 16, and with them the general market became completely demoralized.

The further application of borrowing corporations for capital will be quite as useful a test of the situation as it was in 1903. Looking ahead, one necessarily asks how future months and years are to be financially affected by the spreading of payments over a long period.

HENRY HOLT & CO. NEW YORK

A QUEEN OF INDISCRETIONS
 By G. P. CLERICI. The Tragedy of Queen Caroline of England. Numerous illustrations. 8vo. \$7.00 net. Post 22c.
 JOHN LANE CO., The Bodley Head, N.Y.

Jean Jacques Rousseau
A New Criticism
 By FREDERIKI MacDONALD
 2 volumes, 8vo. Very fully illustrated.
 Net, \$6.50

Mrs. MacDonald's purpose is to establish that, as a result of a conspiracy between two men of letters, who were his contemporaries, an entirely false reputation of Rousseau has been handed to us. She claims that, as a result of the discovery and comparative study of previously unexplored documents, she is able to bring incontrovertible proofs that the doctrine of Rousseau's private life and personal character accepted by his leading French and English critics at the present hour, has for its foundation an audacious historical fraud.

The Nation.

NEW YORK, THURSDAY, DECEMBER 27, 1906.

The Week.

In selecting Charles H. Keep as Superintendent of Banks, Governor-elect Hughes has made an appointment which is not only excellent in itself, but is an earnest of the intention of Mr. Hughes to live up to his campaign pledges. There is especial significance in his dwelling upon Mr. Keep's expertness in financial matters. This can mean only that the new Superintendent will be expected to aid the Governor in that thorough investigation of the Kilburn régime which Mr. Hughes has promised. Apart from this, Mr. Keep's high personal standing, and peculiar competence gained by years of service in the Treasury Department at Washington, emphasize happily the new spirit that is to prevail at Albany. Important offices, it would appear, are not to be regarded as either a means of furnishing out-door relief to indigent politicians, or as rewards to party workers or personal supporters, but, rather, as opportunities for serving the State. It is not to be expected, of course, that Mr. Hughes will be able to find ideal men for all the appointments he will be called upon to make, but his choice of Mr. Keep shows at least that he means to hold the ideal always in view. From Kilburn to Keep is certainly a long step forward.

Happily there is in the Senate one man who will speak out against the further increase of our army and navy burdens. Senator Eugene Hale of Maine has been warmly opposing the bill to enlarge the artillery of the army. To Senator F. E. Warren, the sponsor of the bill, Mr. Hale justly remarked: "The Senator ought to remember that we have no enemies." He then pointed out that the increase of the army is urged now by one corps, now by another. First, having the troops, we are asked to provide defences; and then, having built the defences, we must get more coast guns. Likewise in the navy the cry is first more ships and then more men, and next more ships for the men, and so on world without end. We wish that the following words of Senator Hale might be put into the hands of every business man the country over:

The military establishments are alike. Each is seeking to aggrandize itself, and each sees nothing in the disposition of the revenues of the Government except to increase expenditures. I do not suppose the people appreciate (I do not know that the Senate does) that two-thirds of the revenues of the Government to-day are devoted to the payment of inheritances from past

wars, like pensions, which nobody can stop, and expenditures in view of future wars. Of all the taxes that are laid and all the revenues collected nearly two-thirds are expended for the military in a broad way.

The report of the House Currency Committee on the credit currency plan follows with reasonable closeness the outline agreed upon at the recent Washington conference of bankers. The proposal is that a national bank may issue, without bond security, notes up to 40 per cent. of its existing bond-secured circulation, but that such credit issues shall not exceed one-fourth of its capital, and shall pay a tax of 3 per cent. In addition, it may issue notes up to 12½ per cent. of capital, but this supplementary circulation will be taxed 5 per cent. A cash reserve equal to that already kept against deposits, must be maintained against all this credit currency. A somewhat interesting comment in the report is that the committee "recognizes no difference between this credit currency and deposits subject to check." The security against the notes is ample; the plan dispenses with the tying-up of capital in Government bonds, but introduces, what does not now exist, the safeguarding of notes with a reserve of lawful money. Such an arrangement would certainly facilitate hand-to-hand payments in the busy season; whether it will, as the committee asserts, "almost invariably prevent any panic whatever," is a much more doubtful question. Panics occur because of loss in value of property, loss of confidence in individual credit, and inability to command resources to pay debts. It is therefore difficult to see how any note-issue system ever contrived can prevent such a situation when overconfidence, abuse of credit, and overvaluation of property have brought about the crisis. Nor is it by any means certain that the credit-note plan will do away with absorption of Eastern reserve money for the use of inland communities at the busy season. The West calls for such reserve money at those times because the money belongs to it, having been left with the East at a time of dull interior trade; and because the West needs the "lawful money," both as reserve against its own expanded bank liabilities and for the "small-note circulation" which bank currency cannot provide. We mention these facts, not for the sake of criticism, but because, in our judgment, the worst mistake would be to promise too much with a new system which is at best experimental. For the rest, the passage of this bill in the present short session, amended or unamended, is hardly to be expected, unless the wheels of legisla-

tion move with unwonted rapidity. But the way will at all events be marked out for a future session.

Samuel Gompers's flat charge that forged petitions in favor of the ship subsidy bill have been sent to Congress in the name of the Marine Trades Council of the Port of New York, at least invites attention to the machinery by which pro-subsidy "sentiment" is being worked up in this country. The District Attorney's office is investigating now the story of a man who says he received from one Alexander C. Smith a check for \$2,000, which he was to spend without an accounting, for sending copies of a set of resolutions and a request for their passage to some 14,000 local labor organizations, all this being done on imitated letter paper of the Marine Trades Council, and with the rubber-stamp signature of its secretary. Whether or not any literally criminal act has been committed, the fact remains that the subsidy lobby, liberally supplied with funds, is making every effort to produce the semblance of a popular demand for the "shipping bill."

The producers of doctored and dubious food and drink products, and not the consuming public, are making their wants felt at Washington, where regulations are being drawn for the administration of the Pure Food law. Representatives Longworth of Ohio and Graff of Illinois introduced to Secretary Wilson, the other day, a delegation of "neutral spirit" manufacturers, who entered protest against the tentative ruling of the Department regarding "blended" whiskey. That decision, that the mixture of neutral spirits with rye or bourbon cannot be labelled "blended whiskey," will, so the delegation said, "imperil their business and be a grave injustice." If the drastic ruling stands, these distillers will simply be confronted by the necessity of making a market for their product, alcohol and water flavored with whiskey, under some other name. These injured manufacturers can make something that looks, smells, tastes, and intoxicates like whiskey. It is certainly no less wholesome—according to their own claims it is often more wholesome—and they can undersell the makers of pot-still whiskey by a tremendous percentage. If people will not drink the stuff under these circumstances, why under the sun should the Government be asked to help sell it, by permitting the use of a disingenuous label?

Last spring it was San Francisco's physical ruin which called out the sym-

pathy of the world; this winter it is her subjection to the powers of immorality. Last week, for instance, Rudolf Spreckels revealed Boss Ruef's little scheme for throwing a municipal bond issue into the hands of a special syndicate. To prevent open sale of these securities, the boss actually proposed to order a general strike on all the street railroads, damage the credit of the city, and thus capture the bonds at a low figure. Ruef was quite willing that thousands of workmen should suffer and women and children go short of food that he and his crew might make some money. Did he not control the labor unions, and was San Francisco's government not a government by the labor unions? It is exactly this point to which we would call attention. Champions of labor unions have long proclaimed that if only the laboring men could run a city government, then there would be a paradise on earth. Well, they controlled San Francisco, elected one of their own as Mayor, and the city duly became a paradise—of thieves, of grafters, of the disorderly elements of every kind. The boss, who has hitherto been regarded as the product of corrupt corporations or rich and conscienceless business men, appeared here as the absolute creature of the labor men. We have frequently pointed the political moral of corporation greed and debauchery, but the record of the San Francisco labor-unions shows them to be quite as dangerous to the public interest and morals, when they obtain the upper hand. Government of a class, by a class, and for a class is here, as always, a denial of the basic principle of this republic.

The suit of Missouri against the Standard Oil Company has already brought out evidence extremely damaging to the managers of this Trust. At the hearing in this city last week, Attorney-General Hadley of Missouri extorted from the Standard Oil Company's own witnesses a confession that the company had been setting up dummy organizations which carried on a feigned competition. The marionettes were all operated by wires from the central office, No. 26 Broadway, New York. The legal significance of these facts is a matter for the courts. The moral significance is clear to any one who has the most rudimentary conception of ethical principles. No casuistry from clever lawyers, Baptist clergymen, or complaisant presidents of colleges can cloud the issue. The Standard Oil Company has been guilty of systematic and persistent dishonesty. No other explanation of these pretences at competition is possible. They were deliberately designed to deceive the public. Moreover, this elaborate structure of trickery could not have been erected and sustained without

the knowledge and active interest of the principal officers of the Standard Oil.

"Once an Englishman, always an Englishman," was the British contention a century or so ago. Yet it is to the English law that the commission appointed by the State Department to investigate our naturalization laws points for a precedent, when it recommends that the expatriation of American citizens be assumed when they obtain naturalization in another country, when they engage in the service of another Power, or when they remain domiciled in a foreign country for five years without taking steps to maintain their American citizenship. The adoption of such a rule will at least insure that all the lightnings from Washington will not be let loose again at the behest of an "American citizen" whose real claims upon this country are about as strong as those of the Akhoond of Swat. In Turkey, especially, as the commission recalls, men with American naturalization papers but no real connection with America have been in the habit of demanding and receiving the protection of this Government in the past. This procedure is founded neither in equity nor common sense. The members of the commission, David J. Hill, James B. Scott, and Gaillard Hunt, were selected on account of their special acquaintance with the questions involved, and their conclusions should carry great weight with Congress.

In all the stories about the spiteful tongues and feminine intrigues which led to the recall of Ambassador Durand, it is pleasant to note that there is not the slightest reflection upon him. In capacity and dignity he has been unexceptionable. It was rumored that there was some dissatisfaction about his conduct of the fisheries negotiation; but the merest reference to the Blue Book would show that this business was transacted wholly in London. Sir Mortimer Durand has, for all that appears, discharged his public duties with adequate skill, while in private he has borne himself, under trying circumstances, like a gentleman. If it is true that court influence, set in motion by a *dux femina jacti*, persuaded the Foreign Office to recall Ambassador Durand, it is no credit to the British Ministry, while an obvious wrong to a worthy public servant.

One of the first rulings of Secretary Straus confirms the right of a State to encourage immigration to this country in a manner forbidden to its citizens. South Carolina, through its Agricultural Commissioner, persuaded 475 aliens to migrate to this country, paid their

passage aboard a vessel landing at Charleston, and on arrival distributed them to various points in the State where labor was needed. They were not contract laborers, and the Commissioner did not find them jobs, but they were told that employment was absolutely certain if they would settle in the South. "States and Territories," says Solicitor Earle in his opinion, "may offer inducements or make promises to foreign laborers by advertisements printed and published in foreign countries, and they are not forbidden to 'assist' in the migration of the foreign laborers to whom such offers are addressed." Since intelligent distribution of aliens offers a better solution of the immigration problem than restriction or exclusion, this decision has important bearings. The Western and Southern States which want more immigrants have seen year after year the new arrivals settle in the North and East, where there are already too many. Under the new ruling States in need of foreign labor will be able to help themselves.

A movement for restricting emigration is manifesting itself in those European countries which are generally regarded as sending the least desirable immigrants to the United States and South America. In southern Italy, it is reported, agriculture has suffered severely both from the depletion of farm laborers and the artificial values created by emigrants returning home with their fortunes made, and bent on establishing themselves as landed proprietors. In addition, the constant influx of money remittances from America has tended to discourage industry and given over whole villages to alcoholism. A similar state of affairs is said to exist in Galicia, where the cost of living has been greatly increased by repatriated emigrants accustomed to the higher standards of the New World. In Spain, public opinion is alarmed at the extensive development of emigration during the last few years, a movement which is regarded as all the more formidable, because it is carried on *en masse* and results in the depopulation of towns and districts. Entire villages with their municipal authorities at their head have left for South America. In the city of Bejar, whose population, according to the *Temps*, has been decreased from 20,000 to 9,500 through emigration, more than 700 families have been conducting negotiations with various South American Governments to secure the necessary means for the voyage out and the establishment of a new industrial centre. The Government of Paraguay offered to defray the cost of passage to Asunción, but the would-be emigrants have, according to Wednesday's dispatches, finally accepted offers from Uruguay and Nicaragua to supply ships and funds.

It is an interesting form of auction.

Throughout its insistence upon amending the Education Bill, the House of Lords has taken the position that it is a conscientious "revising body." In that view, its duty is firmly to oppose, or radically to overhaul, any legislation sent to it by the House (except financial) which, in the judgment of the Lords, is improperly drawn and would be bad for the country. So much for the theory. Now for the practice—not in the case of the Education Bill, this time, but the Labor Disputes Bill. That measure is one to give trades unions special immunities under the law, such as exempting their funds from levy, etc. When it was sent to the Lords, the Conservative leader, Lord Lansdowne, spoke of it as "disgraceful," "tyrannical," and "replete with dangerous consequences." The former Lord Chancellor, Lord Halsbury, declared "on his conscience" that "if Parliament passes the bill, it will strike a serious blow against the spirit of freedom which has hitherto reigned throughout our laws." Yet after all these brave words, Lord Lansdowne advised the Tory peers not to reject the bill, and so provoke a conflict with the Commons on "ground that would be unfavorable" to the Lords. This is plainly a complete surrender of the claim that the Lords are a set of conscientious lawmakers, with revisory powers which they will not surrender, and reduces them to a mere register of the will of the Conservative party—and that purely on grounds of political strategy.

The ukase granting concessions to the Jews in Russia will probably be promulgated within a few days. While the exact tenor of the new regulations is unknown, the complete removal of Jewish disabilities is not to be looked for. At the same time, there will be a relaxation along the entire line of anti-Jewish legislation. Without abolishing the Pale, the bill, as discussed in the Council of Ministers, will grant to Jews the right to take up residence in rural districts of the designated provinces, as well as lighten the restrictions imposed on the classes at present privileged to reside without the Pale. The limited right to acquire land, and liberty to improve educational facilities, are among the other concessions expected. Not only has the Government declared its intention of leaving the ultimate disposal of the Jewish question to the Duma, but the interests of the Stolypin Ministry, whose sole object must remain the restoration and maintenance of internal peace, would preclude complete settlement of the Jewish question, followed, as it must be, by violent disapproval among an influential section of the population.

Archbishop Ireland's sermon of Sunday, dealing with the French religious controversy, is marked by a spirit of moderation and just confidence which no pronouncement from the side of the Church has as yet shown. Condemning the course of the French Government, as he was bound to do, he took care to point out that Catholics in France are by no means free from responsibility for the persecution that has come upon them:

The clergy are much to blame. Admirable in teaching the catechism and in administering the sacraments, they have never learned the virtues of public life. French Catholics have been unfortunate in many of their leaders and spokesmen.

Undoubtedly, the Archbishop is right in saying that anti-clericals and infidels have made the preservation of the republic a popular battle cry in order to get into power; but the fact that such an appeal is made with success would argue that the French electorate exercises, though wrongly perhaps, its political judgment in a way that contradicts the Archbishop's estimate of the attitude of the French people. "The masses," he asserts, "are not used in political life. It will require long years to decentralize power in France, to give citizens consciousness of personal independence, to obtain through universal suffrage a true expression of national will."

These are the days when the young aeronauts are seeing visions and the old aeronauts are dreaming dreams. "Human mastery over the air," said Capt. Ferber, the aerostatic expert of the French army, last week, "is virtually achieved. None of the startling achievements of the past, neither steam, electricity, nor the telephone, can compare with what the future now holds in store for us. Not only will the life of individuals be revolutionized, but governments will be compelled to devise, in almost every department, new methods to meet the changed conditions." Never was there an important invention in quite the same status as that of the potential airship. The problem which was originally believed to present the chief if not the sole difficulty—namely, making a machine that would lift itself—was solved long ago. Practically speaking, anybody with mechanical skill can parallel Sir Hiram Maxim's achievement of some ten years since, and construct an aeroplane which will rise from the ground if its balance is only secured. To-day the world is waiting to learn the art of balancing. It may come, as Capt. Ferber expects, by "a coordinating central mechanism which will permit the operator, with an instinctive touch of the helm, to right his machine when it dips to one side or the other, as the bicyclist to-day maintains his

equilibrium by the instinctive inclination of his body." On the other hand, the mere human hand and eye may attain that quickness and dexterity which Lillienthal and Pilcher lost their lives trying to acquire, but which will make possible navigation through atmospheric currents and "blow holes" and whirlpools. Santos-Dumont predicts that airships—as distinguished from dirigible balloons—will be as common within a few years as automobiles are to-day. If the world were full of sailboats, rigged and keeled and cabined, but helpless on the water, because no such thing as a rudder had yet been invented, a similar situation would exist. No one could then be called visionary for saying, "If somebody will only invent some scheme for making these craft go where you want them, people will be sailing on every lake and river before long." It is somewhat the same with the aeroplane to-day.

It will be good news to mountain-climbers and aeronauts that a remedy has been discovered for "mountain sickness." In the *Revue Scientifique*, Professor Aggazzotti discusses the symptoms and causes of this malady, and gives some account of the way in which it can be prevented or cured. Mountain sickness is not to be confounded with fatigue, inflammation of the respiratory tract, irritation of the skin, or effects of strong light. Its sole cause is the rarefaction of the air at great heights. It affects those who make balloon ascensions, and it can be artificially produced at sea-level. The symptoms are fatigue, somnolence, aggravated nausea, dimness of sight, fainting, headache, and palpitation of the heart. The movements of those affected become uncertain and tremulous. The reason is that rarefaction of the air reduces the quantity of oxygen carried by the blood to the tissues. The results of these physiological conditions Professor Aggazzotti explains in detail. In order to counteract these ill effects Professor Aggazzotti administers a mixture of oxygen, 67 per cent.; carbonic gas, 13 per cent.; and azote, 20 per cent. He is able to push the rarefaction of the air as far as permitted by the powerful pumps in the Turin laboratory, without any unpleasant symptoms being noticeable. The importance of this discovery is evident. Mounting to great heights is no longer a mere adventure or amusement. Railways are being carried to the summits of lofty mountains, and a day will come when rails will be laid over the Himalayas and Andes. Professor Aggazzotti's mixture can then be on tap, to give comfort to the traveller. And as progress is made in aerial navigation, with such a remedy at hand, one can rise to far greater altitudes without discomfort or danger.

IRREGULAR DIPLOMACY.

Canadian sentiment is reported to be adverse to the appointment of James Bryce as Ambassador to the United States. The Canadians say that this will put discredit upon diplomacy as a regular career. How can you ask ambitious men to begin with Montevideo, and gradually work their way up through Teheran, Madrid, and Vienna, if at last, just as one of the great diplomatic prizes is within their reach, you go outside and jump over their heads a man without any diplomatic experience whatever? This Canadian argument is, plainly, one for seniority—the argument, as Lord Rosebery says, which Englishmen too often make even when seniority spells senility.

Behind this Canadian insistence upon the technicalities of the *métier*, there doubtless lies an unexpressed feeling. Canada's policy just now is not to make too ostentatiously friendly advances to the United States, and hence she does not like to see England doing it. There are outstanding questions, tariff and other, between this country and Canada, in which Our Lady of Snows would prefer to be stiffly backed up by the British Ambassador at Washington. She has just seen the great anxiety of the London Foreign Office to come to a good understanding with the United States in the fisheries dispute, even going to the point, in arranging the *modus vivendi*, of enraging the Newfoundlanders, and she does not want in her own case any such straining of colonial loyalty in order to retain American friendship. Indeed, it is easy to understand the distastefulness, not alone in Canada, of the plan of treating the United States as a spoiled child among the nations, whom all the others must take particular pains to conciliate. This seems now the general policy among foreign chancelleries. They feel that they must vie with each other in sending rough-riding and tennis-playing diplomats to Washington, lest they fall out of the category of most-favored nation.

There is, of course, nothing of this idea of a chummy athlete-diplomat in the naming of Mr. Bryce. His coming will, no doubt, be a special compliment to this country, but an intellectual compliment. It implies that the English Government perceives that the American people will feel pleased and honored at having sent to them a publicist of rare ability. They have already sat at Mr. Bryce's feet for instruction in the history and working of their own institutions, about which not one American in 10,000 knows as much as he; and they will not care greatly whether his appointment be "irregular" or not, if only they may welcome in high official position the writer whom they have known as a most friendly while

penetrating critic, and discriminating admirer.

Nor can there be any question that Mr. Bryce's peculiar knowledge of this country, and his wide acquaintance here, will be of great advantage to him, both personally and officially. England has no man whom she could send better fitted for that ambassadorship of people to people which counts so much in these days; and also as delegate from his Government to ours, Mr. Bryce will be well equipped. Better than long training in that "art diplomatic" which Coleridge called "stuff," is the intimate understanding of our government, and our popular temper, which he will bring in his equipment. He knows the paper theory, and he also knows the actual practice. Turn, for example, to his pages on the control of our foreign relations—a subject which will instantly become living to him, once in Washington—and his perfect grasp, both of the theoretical and the practical, is immediately perceived. The interplay of President and Senate, in the matter both of treaties and diplomatic appointments, Mr. Bryce accurately explains; and when Europeans ask him how, under such a system, there can be "the celerity and promptitude so often needed to effect a successful *coup* in foreign policy," his sufficient answer is, "America is not Europe." Indeed, he thinks that Europe might well learn something from America in the matter of putting a Parliamentary check upon "the wide discretion of the executive in foreign affairs." This should make Mr. Bryce *persona grata* with the Senate! And his tribute to the power of public opinion with us in restraining a headlong President, bent upon foreign complications, shows the sureness of his touch:

They watch keenly the language held and the acts done by the State Department, and, while determined to support the President in vindicating the rights of American citizens, would be found ready to check any demand or act, going beyond their legal rights, which could tend to embroil them with a foreign Power. There is still a touch of spread-eagleism and an occasional want of courtesy and haste among public speakers and journalists when they refer to other countries . . . but among the ordinary citizens one finds less obtrusive selfishness, less Chauvinism, less cynicism in declaring one's own national interests to be paramount to those of other states, than in any of the great states of Europe.

If it is not "regular" to go outside the diplomatic service to send us such a man as Ambassador, so much the worse for regularity. Mr. Bryce will come to us feeling as strongly as Cowper did that England and America are really "one country"—one "in respect of interest, intercourse, and affinity." Anglo-American diplomacy has no higher function than to exemplify and enforce that

truth; and no Englishman is better equipped to cooperate with Americans in doing it than James Bryce.

THE UNRECOGNIZED REFERENDUM

The British Premier announced last Thursday, in the House of Commons, the Government's decision to withdraw the Education Bill because of the refusal of the Peers to accept the concessions proffered by the Liberals. "Neither the resources of the Constitution nor of the House of Commons," he said, "are yet wholly exhausted, and a way must and will be found whereby the will of the people will be made to prevail." On the same day the French Chamber of Deputies decided to proceed with the discussion of the new religious law, at the urgent demand of Premier Clemenceau. "The Premier insisted upon a rapid solution of the entire question, as the Government was facing a difficult situation in an ineffectual manner, owing to the insufficiency of the present law." The same day thus witnessed the acknowledged break-down of the two most elaborate pieces of legislation of recent years in Great Britain and France.

Yet it would be wrong to declare either the Education Bill or the Separation Law of 1905 a failure in any but a formal sense. As the basis for compromise and amendment, both bills have served the purpose which the more farsighted among their promoters probably had in mind. The two measures were comprehensive, but provisional. And it is in connection with this method of tentative legislation that we see at work a force which we have called the "unrecognized referendum"—the principle, that is, of ultimate appeal to the democracy, whether in the set form of a parliamentary dissolution and election or the more irregular method of stirring up popular opinion in favor of a defeated cause. The referendum is generally regarded as an academic kind of political game, practicable perhaps in little Arcadian Switzerland or Norway, but quite unfitted to the needs and circumstances of a mighty Power. This is measurably true; but it is obvious also that everywhere great legislative measures are enacted nowadays with a view to ascertaining the state of the public pulse with a certainty which mere preliminary discussion can never supply.

Undeniably, this is an expensive way of making laws. Really, the history of the English Education Bill begins with the Act of 1902, which was so bitterly opposed by the Nonconformists. No one doubted that one of the first acts of a Liberal Government would be to wipe the obnoxious act from the statute books, and the Unionist leaders probably felt that the Education Act would be instrumental in bringing the Liberals into power, as in fact it did. But in

politics it is recognized tactics to seize all you can while you have the power, with the object of keeping as much as you can when you have lost power.

In the same way the Liberal Government introduced Mr. Birrell's bill, well knowing that it would be mutilated by the Lords; and the Lords proceeded to cut it to pieces in full expectation of such cries of execration as have come from the Commons. Was it all comedy on the part of both houses? Not comedy, perhaps; but in the background of the statesman's mind there must have been present the consciousness of an impending struggle that would clear the way for final legislation.

The situation is not far different in France. A Separation bill was introduced into the Chamber in December, 1904, by Premier Combes. It was abandoned in committee for a substitute measure, which in turn was abandoned when the Combes Ministry fell in January, 1905. Then came the bill fathered by M. Briand; the protracted discussions in the Chamber, which finally took action on July 3, 1905; and the further discussions in the Senate, which passed the bill on December 6. All along it was evident that the Vatican would not accept defeat without a struggle. But how could the Government tell *what* the Vatican would do, except by delivering its attack? So a Separation law had to be passed and promulgated, and inventories had to be taken, in order that the very situation of to-day might be brought about. And now the Government stands prepared practically to throw over the most important provisions of the Separation Law in arriving at a *modus vivendi*.

An analogy to this principle of costly but tentative law-making may be observed in much of the present-day tariff legislation. Germany's latest tariff law, a wonderfully comprehensive yet minute group of schedules based on years of preliminary investigation, is intended never to come into force except as a punitive measure directed against such nations as refuse to enter into special treaties of commerce. Such treaties of commerce are in turn based on the provisions of the tariff law, and have been negotiated with the principal Powers participating in German commerce. According to Senator Dolliver, who was on the Ways and Means Committee that framed the Dingley tariff, some of the schedules in that measure were made purposely high as a possible basis for the negotiation of favorable reciprocity treaties.

Closely connected with the idea that legislation is neither ultimate nor perfectly sincere, is the tendency of opponents of a law to resort to "passive resistance." This is not a happy phrase, since it does not mean resistance, so much as courting the pains of the law in a spirit of martyrdom, and with the

object of obtaining resubmission of that measure to the people. There is always a minority, and republican institutions have taken for granted that it must submit to the majority. But passive resistance tends to shake one's confidence in the abstract right of the majority, and would substitute for the present rule—the majority to have everything and the minority nothing—a more equitable rule, embodying possibly the privilege of proportional right; so many concessions, say, to the minority for every million voters it can show.

GOOD HATERS IN POLITICS.

A new reminiscence of Bismarck has been published in the Vienna *Neue Freie Presse*, in the shape of an extract from forthcoming memoirs written by Ludwig Doczy. He was long an intimate of Andrassy, who was Foreign Minister when Bismarck came to Vienna in 1873, during the German struggle with the Vatican. Andrassy gave to Doczy his impressions of the Chancellor, gained from several long conversations. Andrassy was loud in praise of the German visitor. He had met many clear-sighted public men, but none who seemed to view the world through such achromatic glasses (*farbloße Brille*) as Bismarck. Then he proceeded to compare the German with the great Hungarian statesman, Franz Deak.

One thing, he said, Deak never had which seems to inhere in Bismarck's nature. Bismarck hates what gets in his way, and his hatred sometimes leads him into blind rage. He gave me to-day a proof of this which left me astounded. He was speaking of the *Kulturkampf*, and when he came to touch upon the Pope, the blood flew to his face, his words, which he at other times seemed to choose carefully, came from him in a rush, and sounded like curses. He called the Holy Father a peril to every country and every throne, a revolutionary and anarchist, whom all Europe must withstand if a single prince was to remain safe upon his throne. I could not forbear seeming surprised at his language, but that only drove him on to harsher words.

It is plain that Andrassy regarded this susceptibility to anger and hate as a serious defect in Bismarck's equipment as a statesman. Nor could one, surveying the great Chancellor's career as a whole, well deny it. Too often he assumed a vengeful attitude towards men who differed with him, or whom he disliked personally. The names of Count von Arnim, Geffcken, and Gontaut de Biron suggest the lengths to which his violent temper frequently hurried him. And it prepared many a humiliation for him. After all his fierce denunciations of the Pope, he had finally to go to Canossa; and for years he had to govern by aid of the Clerical party which he abhorred. Hatreds like Bismarck's come home to roost.

His indulgence of that passion was

principally after he had risen to power. As an obstacle to rising to power, hate has a recognized place. It is illustrated in an anecdote of Joseph Chamberlain, given in the "Letters of George Birkbeck Hill." Chamberlain was President of the Board of Trade, and a shipping bill was shown to him late in the session of Parliament. The man who brought it to him said: "If you will bring in the bill without replying to the brutal attacks made on you by the bad shipowners, and will not make a stir, the bill can be got through; if you make a big speech, it will be lost." Chamberlain replied, "I am not like you, who can turn the other cheek when smitten on one. I shall attack those who have attacked me." He made a brilliant speech, and the bill was never carried. X—said to himself, "That man will never be Prime Minister. He hates too well."

It may, of course, be said that a capacity for cordial hate necessarily goes with the great driving qualities which give men like Bismarck and Chamberlain their power. And few will deny that, compared with the politician who swallows all rebuffs, and cherishes no resentment, in order that he may get or keep office, the good hater in politics is a respectable figure. When Dr. Johnson said that he liked a good hater, he probably meant a man who used discrimination in the objects of his hatred. A too universal distributor of vitriol can be admired by none.

A good deal of fun has been poked at the theological distinction between hating the sin and loving the sinner. Something of the sort, however, is a sound rule in politics. It is of the highest importance to the Government of France, just now, for example, that nothing like personal animosity should appear in its dealings with the Pope in regard to the status of Church property in France. Any such violent language as Bismarck fell into would defeat its own end. Fortunately, M. Briand, the Minister directly in charge of the matter, is a man whose great ability goes with good manners. The absence of all heat in his public utterances on the Church question, is, in such a crisis, the sure mark of a statesman.

READING FOR CHILDREN.

We have just been reviewing the annual output of books for children. Of the hundreds of volumes that were sent us, the overwhelming majority were obviously rubbish; and of the comparatively few culled out for notice, not one provoked the reviewer to enthusiasm. At best, the books were scarcely more than innocuous and tolerable. This fact is disquieting to thoughtful parents, who find that each year the problem of providing children with suitable reading becomes more difficult. You may take high ground and refuse to buy the cheap

and trivial, but nevertheless your boys and girls will see it at the houses of neighbors—will see and probably borrow. In such cases, absolutely prohibition, unless the book be clearly demoralizing, is unwise. An *index expurgatorius*, for children as for adults, does little more than provoke curiosity and stimulate interest.

The change which a century has wrought in books for children is forcibly shown in Henry Frowde's reissue of Mary Wollstonecraft's "Original Stories from Real Life; with Conversations Calculated to Regulate the Affections and Form the Mind to Truth and Goodness." The volume, first published in 1791, is characteristic of the author of "A Vindication of the Rights of Woman," and characteristic also of the age. That was the period when Day's "Sandford and Merton," Mrs. Trimmer's "History of the Robins," Holcroft's translation of Madame de Genlis's "Tales of the Castle," and Maria Edgeworth's "Parent's Assistant"—when this solid mass of didacticism was regarded as the very thing to cultivate in young people a taste for literature. These stories contain relatively little incident, and that warranted to soothe the mind rather than excite it. There are long pages of discourse, dull, edifying, not to say priggish. In Mary Wollstonecraft's "Original Stories" a Mrs. Mason is always preaching to her young charges. When a storm is impending she assures the children:

No, certainly, I am not afraid. I walk with the same security as when the sun enlivened the prospect—God is still present and we are safe. Should the flash that passes by us strike me dead, it cannot hurt me, I fear not death! I only fear that Being who can render death terrible, on whose providence I calmly rest; and my confidence earthly sorrows cannot destroy. A mind is never truly great till the love of virtue overcomes the fear of death.

Such a passage as this in "Original Stories," or any of these highly recommended books, is a complete commentary on some often quoted sentences from Hazlitt's essay, "On Reading Old Books." He is speaking of the time when he was "a little, thoughtless child":

"Tom Jones," I remember, was the first work that broke the spell. It came down in numbers once a fortnight, in Cooke's pocket-edition, embellished with cuts. . . . With what eagerness I used to look forward to the next number and open the prints! Ah! never again shall I feel the enthusiastic delight with which I gazed at the figures, and anticipated the story and adventures of Major Bath and Commodore Trunnion, of Trim and my Uncle Toby, of Don Quixote and Sancho and Dapple, of Gil Blas and Dame Lorenzo Sephora, whose lips open and shut like buds of roses.

We must not be understood as urging upon children such books as "Tom Jones," "Peregrine Pickle," "Tristram Shandy," and "Gil Blas." They are

not milk for babes. But we have not the slightest fear that our heirs of all the ages will turn to Fielding, Smollett, or Sterne while they have Henty and his fellow-craftsmen, large and small. Boys who vote Scott and Cooper stupid and long-winded, boys who are used to such highly spiced food that they find Dickens flat and insipid, will never be tempted by any of the eighteenth-century novelists—barring Defoe. Some English journalists, apparently unaware of developments in juvenile literature since 1860, have been gravely discussing the question whether children should be allowed to read Shakspeare. *Allowed* to read Shakspeare? How can we possibly persuade them to read Shakspeare? It is all very well to assure us that the guileless mind of the child can receive no contamination from the grossest scenes in Elizabethan drama, that "innocence has a panoply of its own"; more impenetrable than the panoply of innocence is that of indifference. The child who classes "The Merchant of Venice" with Blair's sermon "On the Duties and Consolations of the Aged" will assuredly gain neither benefit nor harm from either work.

Yet time was when even children thought Shakspeare entertaining. A glimpse of that irrevocable golden age is given us in one of Eugene Wood's delightful sketches, "The Drama in Our Town," in *McClure's* for January. In *Our Town* it was bad enough to read that book whose title bore those "black and shameless words, 'Adam Bede, a Novel.'" There was, however, a lower depth of depravity. "You had borrowed from a neighbor Shakspeare's Plays. You heard what Brother Longenecker said about that only last Sunday. He said 'Shakspeare is the Devil's Bible!' And you had borrowed that book, *borrowed* it, when you had Butler's 'Analogy of Revealed Religion,' Nelson's 'Cause and Cure of Infidelity,' 'The Autobiography of Hester Ann Rogers,' and other good books about the house, scarcely opened." This is an echo from an antediluvian world—the world as it was before the flood of books for children overwhelmed it. Few children of to-day would dream of borrowing George Eliot or Shakspeare for the mere pleasure of reading. George Eliot and Shakspeare are part of our school courses in literature and as such are manifestly beyond the pale of human interest.

And what is the remedy for this evil? We do not, we confess, know exactly what to do for our own children. Librarians, a multiplying and a zealous race, proceed on the theory that the thing to do is to cultivate in the young a taste for reading and trust to time and growth to improve that taste. What with children's rooms and story hours, the librarians are making a high bid for the attention of our youth. Indeed, schoolmasters are beginning to com-

plain of the superior attractions of the library. When the very latest thing in adventure and fiction invites, arithmetic and grammar may seem almost as tiresome as George Elliot and Shakspeare; and the opening of a new public library may result in lower marks in the prescribed studies. But we cannot wholly sympathize with those fathers who lament because the new librarians are making boys too fond of books. In this matter we must trust to the uncovenanted mercies of that providence which watches over every rising generation. A lad who reads widely and omnivorously is likely, sooner or later, to discover his way to the best; and even if he never rises above second-rate books, he may at least be saved from recreations that are vulgar and debasing.

AN AUSTRALIAN ANTHOLOGY.*

SYDNEY, December 2.

"How are your poets?" asked a consul-general for the United States, when he first set foot in Sydney. "They are dead, I thank you," was the reply. It was almost literally true. Australia is a stony-hearted stepmother, who slays the sons of Apollo, and only one of the more eminent of her poets was then alive, although most of them, had fortune dealt more kindly by them, might be living at this hour. The history of Australian poetry, brief as it is, affords a lamentable retrospect. Three of our best writers—including the greatest of all—died by their own hands. Others, including one only less great, sank untimely into their graves, after checkered lives that recall the early Elizabethan dramatists. Only a few months ago the last of that school was appropriately laid to rest, where the Pacific breaks at his feet. The new generation has been washed, combed, dressed, and made presentable, and it has ceased to cultivate poetry, as the first Edinburgh reviewers cultivated literature, "on a little oatmeal." The new Australian poet is the editor of influential journals, stands high in the teaching or other professions, or has been provided with a comfortable post in the civil service or the libraries. Poetry has not always gained by the change. It was simple and sincere, powerful and passionate, faithfully reflecting the melancholy moods of its composers, and the agitated circumstances of their ill-starred existences; it is now elegant, ambitious, affecting high themes, but destitute of the power to stir or move.

By common consent, the strongest of Australian poets was Adam Lindsey Gordon, whose name the editor of the new anthology misspells, *Lindsay*, although the true orthography was definitely ascertained by Douglas Sladen, the editor of an anthology published ten or twelve years ago. Like many of his elder poetic brethren, Gordon was an immigrant. Born at the Azores, but reared in England, he came out to Australia in his hot youth, and his "Exile's Farewell," if it does not rank with Byron's or Hugo's parallel

*"An Anthology of Australian Verse." Edited by Bertram Stevens. Sydney: Angus & Robertson, 1906.

poems, may pair off with Edward Bliss Emerson's "Last Farewell." The emigrant's wretch from home—so little lacerating in these days of easy intercommunication—in the old days was terrific, and has inspired many a poem. Gordon's powers came to maturity when he settled down as a sheep-farmer on the heights between Victoria and South Australia. He found a still more fitting environment when he deserted this ideal—but in his hands unprofitable—pursuit, and took to horse-breaking. Then he won a cheap fame as a steeplechase rider in the country of horse-racing par excellence. A wild life he led. He did not drop his acquirements, and he translated from Greek and Latin, German and Spanish; but it was in phonographing the experiences of the English gentleman sunk to the level of a station hand that his genius won its triumphs. "The Sick Stockrider" (reprinted in the volume under review) is perhaps the solitary Australian poem that has a chance of immortality. The stockman has come to the end of his tether, and recalls, as his comrade lifts him down from the saddle, the ineffable joys of past days:

'Twas merry in the glowing morn, among the gleaming grass,
To wander as we've wandered many a mtle,
And blow the cool tobacco cloud, and watch the white wreaths pass,
Sitting loosely in the saddle all the while,
'Twas merry 'mid the blackwoods, when we splod the station roofs,
To wheel the wild scrub cattle at the yard,
With a running fire of stockwhips and a fiery run of hoofs;
Oh! the hardest day was never then too hard!

Oh rebel to the last, as Gordon was, he feels no remorse:

This I know—
I should live the same life over, if I had to live again;
And the chances are I go where most men go.

Gordon's masters were Shelley, Browning, and above all Swinburne, whose unmistakable accents he borrows to describe his adopted country in the "Dedication" to another sportsman—the author of "Holmby House." Seventeen years ago, in the *New Review*, the master entered into rivalry with his disciple. "The Swimmer's Dream" shows Swinburne at his best and his worst. Not even Tennyson's "horns of elfland" wakes such echoes as those unapproachable lines; but the volume of meaning in them is inappreciable. Twenty years earlier Gordon had dreamed the same dream in "The Swimmer" (unfortunately, not included in the present selection), but while the slender-bodied English poet, with the fair face, the shrill voice, and the eloquent tongue that enchanted the listener, seems to melt passively into the waves, the shaggy-breasted Australian athlete, with bass pipe and the thews and sinews of a man, contends with them and wins a victory over them.

With Gordon's tragic death by a gunshot wound on the scrub near Melbourne, at the death-age of genius—thirty-seven—Henry Kendall passed into the first place as an Australian singer. He was of mingled English and Irish origin, and thus "the German paste in his composition" was kneaded with Celtic fire. He is another son of Swinburne, who acknowledged the beauty of his verses with his ungrudging and unflinching recognition of the merits of his brother poets. Kendall was well

aware of the derivative character of much of his inspiration, and he admitted that there were

Some notes that unto other lyres belong,
Stray echoes from the elder sons of song.

But if he borrowed the lilt of the English masters, he adapted it to a new environment. None has more felicitously rendered the magic tones and wonderful effects of the Australian atmosphere, which inspires its lovers to use swelling epithets. The keyword of Australian prelates and statesmen is "magnificent," and the keyword of its poets is "splendid." The gloomier aspects of nature, with such a sun to light them up, they hardly know. Kendall's life was one of the saddest in the annals of poetry, but his lyrics are bright and fairylike, and his rare blank verse is nobly ethical. Like Tasso, Nat Lee, William Collins, and many another of his race, he made the acquaintance of the madhouse, and though Sir Henry Parkes, Premier of New South Wales, always generous to struggling men of letters, honorably came to the rescue with a Government appointment, the broken-hearted bard "fretted himself to death." "His wound was deep; he fain would sleep."

A successful poet, who was at the same time conspicuously prosperous in public life, is a jewel in the beauro of misfortune. Alfred Domett will live as the original of Browning's "Waring" in a poem where the modern Shakspeare took some liberties with his model. Waring really left for New Zealand, but not surreptitiously, as hinted, and Browning, who long corresponded regularly with his distant friend, well knew where the new avatar of Vishnu had been revealed. Domett became colonial secretary of his province, and after representative institutions had been granted to the young colony, he rose to be its Premier. In the Premier's office (so one of his successors informed your correspondent), or, more fittingly, at Sir George Grey's romantic island-home at Kawau (as Grey asserts), was composed the only considerable poem yet produced at the Antipodes. The publication of "Ranolf and Amohia" in London, when Domett came back from thirty years' exile in the South Seas "with this to show for it," aroused general curiosity. What new message had the seer from the cannibal islands brought, what new truths had he to communicate as the fruits of his long residence in alien scenes? Tennyson was cordially appreciative: the poem revealed "intellectual subtlety, great powers of delineating delicious scenery, and imaginative fire." Domett's old and unchanged friend, Browning, was enthusiastically eulogistic: he ranked it under nothing "for subtle, yet clear writing about subjects of all others the most urgent for expression, and the least easy in treatment." It is a long philosophico-descriptive poem of 14,000 lines, where the unique scenery of the wonderful Hot Lakes district of New Zealand was perpetuated only a few years before its most striking features were obliterated by a volcanic eruption. The poem no less glorifies the dying Maori race, caught just at the moment when its nobler attributes were at the point of vanishing, by linking the fortunes of the hero (Ranolf) with a ro-

mantic Maori maid (Amohia). Two brief excerpts from it are given in the present selection. Should not the editor have included the stirring elegy on Capt. Cook, which might well be (if, indeed, it has not already been) incised on the monument to the old navigator in St. Paul's Cathedral, London?

Domett was connected with Browning by still other poetical ties. He was the "Alfred, dear friend" of "The Guardian Angel." He was the "friend, over the sea" of "Time's Revenges" who had championed the drama, "Pippa Passes." And when he returned to England Browning was among the first to welcome him. Longfellow reprinted his "Christmas Hymn" in 1845, and thirty years later he wrote to the author: "I have lost none of my old admiration for it." American periodicals reprinted it year by year; and over 1,300 American artists competed for a prize of \$3,000 offered by Harper & Brothers for the best illustrations of the poem.

Add to these the late Charles Harpur, preëminently the poet of the bush, who alone has finely rendered its atmosphere of "weird melancholy"; and also the late James Brunton Stephens, author of "Convict Once," whom the Prime Minister of the Commonwealth dubbed "the poet laureate of Australia," and we have all the *dei majores* of Australian song. They are as giants among the pygmies of the present generation, and yet much of the verse produced in recent years is both strong and of high quality. Judged by the circulation of their works, the two leading versifiers are Henry Lawson, author of "While the Billy Boils," and A. B. Patterson, "the Man from Snowy River." Their vigorous stanzas are redolent of the drover's track and the swagman's wanderings. Lawson, the son of a Norwegian, is really Larsen by name, and his racy verses show how completely he has assimilated bush life. His is not the only example of the æsthetic advantage of a foreign strain. Johannes Karl Andersen, of Danish origin, furnishes a New Zealand parallel to H. H. Boyesen, and in his polished lines we detect the same blended note of culture and—what shall we call it?—Scandinavianism so audible in the Norsk American. Very radical Australianization is no less observable in the poetesses. Miss Werner was for the time and Miss Castilla is for always a thorough Australian; and Ethel Turner, though of English birth, has made herself the unsurpassed poet and novelist of "the little Australian." A child-poem of hers, happily given by Mr. Stevens—"A Trembling Star"—is (in Carlylean phrase) "written as in starfire and immortal tears," withal so perfect in form and compact in structure that not a line of it can be detached from its context. But the Australian and New Zealand women (numbering between a fourth and a fifth of the total poets of the new anthology) come honorably out of the contest with their brothers for Parnassian bays, as they do for academic laurels. Miss Jessie Mackay's lofty threnody, through which the bagpipes scream, is instinct with the grief of a whole people for the Highland shepherd who inaugurated the nationalization of the land in New Zealand. Broken with heroic toil and, alas! bitter strife, the tribune crept from his home to the wayside railway

station, where the Prince of Wales arrested his progress through these colonies to bestow on the dying man the *accolade* of knighthood. It had been nobly earned.

He found her a land of many domains,
Maiden forest and fallow plains—
He left her a land of many homes,
The pearl of the world where the sea wind roams.

J. C.

Correspondence.

THE EXAMPLE OF BRUNETIÈRE.

TO THE EDITOR OF THE NATION:

SIR: Brunetière stood for two ideals: One in politics, namely, that, in order to get out of the confused state of affairs which has prevailed in France for many years, and in order to restore lasting peace and stability, an authority was necessary above the people; and for this authority he looked towards Rome.

The other in literature, namely, that the really great literature in France, the one most in accordance with the glorious traditions of the country, was the classical literature of the seventeenth century. Its ideal was high, its philosophy was wise, its style was great. As other influences prevailed—be it England in the eighteenth century, or Germany at the beginning, Scandinavia in the middle, cosmopolitanism at the end of the nineteenth century—France was no longer keeping its rank as the nation representative of original, strong, and refined civilization. France was no longer France.

Brunetière wrote not a line without fighting directly or indirectly for his convictions. Read his famous article on "Classicism and Romanticism," or read his "Discours de Combat," or read even his papers on the proposed spelling reform in France: you will find always the same man fighting for the same ideals.

His philosophy may have been all wrong. I think it was. But he had a philosophy; and this has come to be a rare thing in our days, even in the class of scholars who ought to keep more intimately in touch with the world at large, *i. e.*, in literary men. Beside Brunetière, can you name a literary critic of some fame who has any philosophy of his own, or who is not, indeed, proud of having none? They say it is not "scientific" to have one. This word has become ridiculous, so much has it been misused. To fall on one's knees before a scrap of paper containing an unpublished line of some obscure poet; to speak of the "sacrosanctity" of the commas of the world geniuses; to bless an editor who gives us the chance to enjoy to-day even the "misprints" of an original edition of the sixteenth or seventeenth century; or, again, to pile up documents in order to ascertain whether Lamartine had kissed Elvire, whether certain scenes of D'Annunzio were plagiarisms or reminiscences—this is what we call science.

Brunetière owned the very rare gift called in his own language *le sens de la perspective*; he scorned this sort of research, and he has often expressed very boldly his opinions in such matters. Did he not, in the last article that came from his pen (*Revue des Deux Mondes*, November 1, 1906) use the word *fatras* with ref-

erence to some volumes of the *Société des Anciens Textes*, a collection generally regarded as a triumph of modern scholarship and editorship?

Even if we reject his political and literary theories, in one thing Brunetière will remain an example to us all: he would always know which problem was of vital interest and importance, and he laid stress on that. We sometimes complain that our contemporaries do not pay attention to our efforts and our work. Is it surprising that they should turn their backs on those who so often are mere hairsplitters? No, it is legitimate. As long as we make it a point to bury ourselves in our own specialties, like a rat in his cheese, how can we expect the world to be benefited by us? How can we expect the world to pay any attention to us, if we do not pay any attention to the world? Brunetière understood it, and he adopted another method: he stepped to the front; he had something to say, and he spoke. His fellow-critics often tried to ridicule him, but his fellow-men respected him for it, and he became a real power among his contemporaries.

The Kingdom of Heaven belongs to those who take it by violence!

ALBERT SCHINZ.

Bryn Mawr, Pa., December 19.

THE FOUNDATION OF SCHOLARSHIP.

TO THE EDITOR OF THE NATION:

SIR: In this week's "Notes" you discuss Miss Crouse's "Algiers," showing wherein it falls short of the "Alhambra" and "Hyperion." Among other things, you say, most truly, "That preliminary labor and carefully veiled scholarship which bottom the work of even the lightest of the great descriptive travellers do not show here," *i. e.*, in "Algiers." Yet, may I grumble? While "Hyperion" was in your mind, why not have quoted the youthful romancer's own words, in the beautiful "Miserere" chapter?

And, to cheer thy solitary labor, remember that the secret studies of an author are the sunken piers upon which is to rest the bridge of his fame, spanning the dark waters of Oblivion. They are out of sight; but without them no superstructure can stand secure.

Words as wise as noble. We need them more than ever in these get-there-quick days.

J. M. HART.

Cornell University, Ithaca, N. Y., December 22.

Notes.

Juvenal now takes his place in the Temple Greek and Latin Classics issued by G. P. Putnam's Sons. The translation, printed, as in all the series, on alternate pages with the text, is the vigorous work of William Gifford, Murray's right-hand man in the days of the old *Quarterly*. The text is expurgated by the omission of long passages, which seems to us needless and impertinent. Parts of the sixth satire, especially, cannot be reproduced literally in English, but the Latin here might be given alone or with an *ordo*. The classical languages are not likely to be read for illicit purposes in these days.

Several of the studies in *Hilaire Belloc's*

"Hills and the Sea" (Scribners) were first published in the English dailies, and very much out of place they seemed, in the silly season, in the columns of the *Morning Post*. They are far more effective taken together, and the mood in which to enjoy them is easily summoned now that one is undistracted by the brisker style of the journalism that was their setting. Mr. Belloc is one of those who feel the keenest sense of life when they linger in remote bypaths, eat coarse food, and are, like Antaeus, in close and reassuring contact with earth and the unchanging ways of sailors and hill men. Permanence, whether it show itself in an oaken roof in a Sussex stable, or the habits of the dwellers in the fastnesses of the Pyrenees, is Mr. Belloc's fetish. He need not, however, go very far afield to satisfy his craving for "places that preserve their historic continuity, and satisfy the memories in one's blood." He writes of the town of Lynn on the east coast of England, Lynn with its memories of the Baltic and the Lowlands, in much the same mood of dreamy ecstasy as inspired him at Arles. At Arles, indeed, he has been forestalled by Vernon Lee and Arthur Symons, and many a tourist who has enjoyed there "full communion with antiquity." The desolate fens of East Anglia are described in more than one of these sketches. In "A Family of the Fens" Mr. Belloc tells the strange tale of the draining of the fens by the Russell family in the seventeenth century. All the adventurers who tried that Herculean task were ruined, except the Earls of Bedford. In "The Guns" and "The First Day's March," vivid descriptions of Mr. Belloc's experiences as a French conscript, serving in the artillery, he writes with spirit of human intercourse and action, an effective contrast with the majority of the essays, which are records of solitary sails and rides and walks.

No. 4, vol. xiv., New Series, of the Proceedings of the Modern Language Association of America, covering the twenty-third meeting, held last December at Haverford College and the University of Wisconsin, is just issued. Among the most interesting papers are those by Walter Morris Hart, on "Professor Child and the Ballad," and William Guild Howard, on Goethe's Essay on Laocoön. Professor Hart was stirred to his writing by Professor Gummere's declaration that a collection of Child's critical remarks on the ballad would be valuable in studying the popular ballad as a distinct literary type, and he has undertaken to show the general drift of Child's sentiments, grouping them according to authorship and transmission, subject-matter, technique, a comparison of the "Ballads" of 1857-59 and "The English and Scottish Popular Ballads" of 1882-98, and general comments upon specific ballads. The celebration this year of the 400th anniversary of the finding of the marble group of Laocoön and his sons in Rome probably suggested the paper on Goethe's "Über Laokoon." Examining Goethe's temperament and preparation for the study of the antique, and constantly comparing him with Lessing, Dr. Howard concludes that no man knew better than Goethe the insufficiency of naturalistic methods in the fine arts. He valued the Laocoön because, in his opinion, it was not merely true to nature, and

the presuppositions of his admiration have become, in a large measure at least, the criteria of our judgment.

In the eighth volume of A. H. Smyth's "Writings of Benjamin Franklin" (Macmillan) is given the correspondence for three years, 1780-1782. Franklin is shown at his best. Though suffering bodily, his mind is alert and his patience almost without limit. His masters, Congress, had impressed upon him an unreasonable amount of labor, and a particularly exasperating combination of diplomatic, financial, and commercial details that often threatened him with serious trouble and bankruptcy. The captains of the Continental vessels abused him, their agents (and sometimes themselves) were dishonest, and their jealousies were brought to him for recognition. His colleagues on the Peace Commission did not show discretion in their dealings with the French Court, and their debts came to Franklin for payment. In all these difficulties the old man (he was now seventy-five) proved his abilities and surmounted the obstacles strewn in his path. His letters to Congress and to Vergennes are masterpieces of simple directness, wise in warning and in gratitude, and awakening a confidence in him on both sides of the water which few men, if any, have since enjoyed under more favorable conditions. The volume contains little outside of his correspondence. The dialogue with the gout, the supplement to the *Boston Chronicle*, the hints to emigrants to America, and an apologue sum up those features, pointing to a decreased activity. But the journal of the peace negotiation and his letters prove that there is no decay of mind. The editing is exact and the text is clearly an improvement on previous editions, though the novelties are few in number.

When the "Arabian Nights" reached the standard haven of "Bohn's Libraries" it was only fitting that it should be in the form of Lane's translation. Whatever exception may be taken to the style and method of that rendering—and both can as easily be defended as attacked—there does not exist in any European language a publishable version which can compete with it. Mr. Payne's might, if it could be put into household form; but from such a modification honorable adherence to a promise given to his original subscribers has restrained him. The present edition of Lane has been recast by Professor Lane-Poole, and it is to be completed in four volumes, three of which have now appeared. The text is given entire and untouched, save for some reform of the spelling of the proper names, but the commentary has been almost entirely cut away. A few absolutely essential notes come at the foot of the pages, and at the end of each volume are three or four pages of critical notes for the student of the Arabic original. This abbreviation is supposed to be in the interests of popularity, but those who grew up with Lane's notes and gradually soaked themselves through these in the ideas and life of the Muslim East will view the loss with something like consternation. The same holds of the Harvey illustrations—here also vanished. With all their *gaucherie* and even inaccuracy, they had become as integral a part of the work as the text. In their stead comes a picture of Lane himself, in Orien-

tal dress, from a drawing made in 1838. This is most striking. Lane's type of face must have been a passport in itself to Muslim society. As is known, one of his Cairene friends could never be persuaded that he did not belong to a prominent Meccan family. "Aladdin" and "Ali Baba" are to be added to the last volume, with an index and glossary and a review of the history and sources of the "Nights." Than Professor Lane-Poole no one is better fitted to write such an account; may he take the space to do it thoroughly and completely.

Henry Holt & Co. publish a new edition of Goethe's "Iphigenie auf Tauris," by Prof. Max Winkler of the University of Michigan. Besides a carefully tested text, embodying the main points of vol. x. of the Weimar edition, a bibliography, incomplete and yet giving the more important recent material on the "Iphigenie," including both German and French school editions, there is an introductory essay dealing with the legend of Orestes, the question of blood-guilt among the Greeks, the story of Orestes and Iphigenia in ancient literature—particularly in the period from Homer to Æschylus—and the "Electras" of Sophocles and Euripides, and the same legends in French and German literature before Goethe. The genesis of Goethe's "Iphigenie" is explained in his experience up to the end of 1775, his relation to Frau von Stein, and his labors on the masterpiece, first in Weimar and then in Italy. That which marks this critical essay especially is the discussion of the healing of Orestes, the pivotal point of the play. Professor Winkler agrees with leading critics that "the 'Iphigenie,' like the representative works of Goethe, must be studied from the standpoint of the poet's experience, and that therefore a careful analysis of this experience and the poet's own correspondence are the safest guides for the sound interpretation of the drama." The notes are scholarly and independent.

The present conditions in China are interestingly described by the Hon. T. W. Foster in the *National Geographic Magazine* for December. The efforts towards reform in education, the opium habit, the creation of an army, the establishment of a parliament, the development of the country's resources are well treated. He presents the Chinese side of several important matters. For example, he shows how entirely right the Government was in compelling the surrender of the Canton-Hankow railroad concession. He closes with a reference to the honorable and patriotic feeling towards the payment of that "outrageous imposition," the Boxer indemnity. An appeal for financial aid to meet the semi-annual instalments has been responded to by the offer of the officials of the whole country down to the eighth grade to contribute one-fifth of their salaries till the whole indemnity has been paid. Their example has been followed by the gentry and merchants, guilds, societies, Christian churches, primary schools, and all classes contributing liberally according to their means. The Hon. John Barrett, our minister to Colombia, introduces an illustrated account of that country with a sketch of our present relations to Latin America, emphasizing the great significance of Secretary Root's recent tour. The last great

elephant hunt in Siam given in honor of the Crown Prince on his return from his visit to America, is shown graphically by a series of full-page reproductions of photographs with explanatory text by Miss E. R. Scidmore.

The January issue of the *New England Historical and Genealogical Register* begins publication of a very intelligent and systematic exploration, for New England names, of the Probate Courts at Peterborough, England. The several select wills are abstracted, and annotated where light can be shed upon them from New England annals. In the same number, with reference to one of the most singular features of modern daily journalism, the *Boston Transcript's* genealogical department, it is stated that a complete index to it from the first has been maintained in the Public Library at Lynn, Mass., and possibly also at Bangor, Me.

McClure's Magazine for January contains the first instalment—and very interesting it is—of one of the features of the new year, "Mary Baker G. Eddy; the Story of Her Life, and the History of Christian Science." The writer, Georgine Milmine, here deals with the first four decades of Mrs. Eddy's career—her hysterical childhood, her first two marriages, and the early influences by which she was surrounded. The facts are set forth dispassionately; and they go to show that Mrs. Eddy's memory as it has dealt with this part of her life, has either played her utterly false, or has extraordinary powers of refraction.

Fresh proof of the range of President Roosevelt's intellectual interests is furnished in his article, "The Ancient Irish Sagas," in the *Century* for January. He does not attempt a critical study, but he merely tells of the things which he has found personally interesting in this ancient poetry.

The December issue of the *Bulletin* of the New York Public Library contains the second and last instalment of the Naval Letters from Capt. Percival Drayton, 1861-1865.

An article of quite unusual interest has appeared in the December number of *La Lettura*, a monthly periodical published in connection with the *Corriere della Sera* of Milan; for in it Prof. Guido Biagi, the well-known author of "La Vita Privata del Fiorentini," has instituted a scholarly comparison between the American merchant of to-day and the Florentine merchant of the Trecento. His article is entitled "Mallzie di Mercanti antichi e moderni," and the two documents upon which he bases his argument are: for the United States, Mr. H. Lorimer's "Old Gorgon Graham"; and, for fourteenth century Florence, a hitherto unpublished codex in the Archivio Riccardiano. The latter, which was written by a certain Paolo di Messer Pace da Certaldo and preserved by his descendants to the fourth generation, professes to be a "Libro di buoni assempli e buoni costumi, e buoni proverbi e buoni amaestramenti," but contains also much practical advice and throws a fresh flood of light upon the every day life of the period. The somewhat bizarre comparison with the methods of the Union Stock Yards does nothing to militate against the value of Professor Biagi's researches, which will be heartily welcomed

by every student of mediæval Italy. The article is illustrated with photographs of miniatures from contemporary codices.

The biography of the late Dean S. R. Hole is in preparation, and a request is made that letters or other pertinent papers be lent to Mrs. Hole, Waterbury, Kent.

On Wednesday of last week W. J. Craig died at the age of sixty-three, Mr. Craig, an English student of Elizabethan literature, was editor of "The Oxford Shakespeare." He was engaged on an elaborate "Shakespeare Lexicon," with illustrations from the literature of the period. It is not yet made known how far toward completion this great work was carried.

Last Friday, at Melbourne, Australia, occurred the death of the Rev. Robert Rainy, principal of New College, Edinburgh, one of the most prominent Presbyterian clergymen of Great Britain. From 1851 to 1854 he was minister of the Free Church, Huntley, Aberdeenshire, and of the Free High Church, Edinburgh, from 1854 to 1862. In the latter year he became professor of church history, holding that chair until 1900. His chief works are: "Life of Principal Cunningham," "Delivery and Development of the Christian Doctrine" (being the Cunningham Lecture). "The Bible and Criticism," "The Ancient Catholic Church."

At the last meeting of the Vorderasiatische Gesellschaft in Berlin, Prof. Hugo Winckler, the Assyriologist, gave a full report of a rich new archaeological field which he has undertaken to investigate under the auspices of the society. This is found at Boghaz-Koi, about five days' march east of Angora and in the heart of Asia Minor. A preliminary investigation had led Professor Winckler to regard these remains as the city of Arzaba, which from 1500 to 1100 B. C. was one of the leading cities of the famous Cheta or Hittite kingdom. Now, however, he has learned that he has found the city of Cheta itself, the central seat of this empire. Among the finds are a large number of letter fragments, tablets, etc., containing among other things treaties with the Kings of Egypt, as also with subordinate potentates. It appears that the Cheta Empire was a federation of States, reaching at that time to the borders of Syria, but with a central power vested in the Great King. The archaeological finds made here amount to more than two thousand items, and furnish material for research for years to come, that may clear up the problems connected with the mysterious Hittite Kingdom.

At the leading German universities there had been for several years associations of women students, and at a meeting of representatives of these lately held in Weimar a national woman's university society was established. While this new organization proposes to advance the cause of the higher education of women in general, its first and foremost object is to inaugurate a movement to secure for women the right of matriculation in the universities of Prussia. As matters now stand, practically all the universities of the smaller States in the German Empire admit women on an equality with men; but Prussia, which is generally credited with having the best institutions of this kind, refuses to enroll women as full university students. This new Verband studierender Frauen Deutschlands

has decided to appeal to the Empress to use her influence for their cause.

JEAN JACQUES ROUSSEAU.

Jean Jacques Rousseau: A New Criticism. By Frederika Macdonald. 2 vols. New York: G. P. Putnam's Sons. \$6.50.

The "new criticism" displayed in these needlessly bulky volumes turns out to be an enlargement and confirmation of the same author's contention in her "Studies in the France of Voltaire and Rousseau," published in 1895, from which one whole chapter is excerpted, with modifications, on the subject of Rousseau's children and his putting away of them (I, 140). While, in the course of her minute argument, she touches almost every phase of Jean Jacques's career, but unevenly, the work is not for those who would seek in it a first acquaintance with the man whose 200th birth anniversary will be celebrated six years hence. Such as are, on the contrary, already more or less familiar with his biography in its broader outlines, will find their profit in Mrs. Macdonald's challenge of the defamers of Rousseau's personality—both among his contemporaries and by too subservient latter-day accepters of the legend invented by them, notably Sainte-Beuve, Saint-Marc Girardin, E. Scherer, John Morley, and Percy and Maugras.

It is upon the decade 1746-1766 that her searchlight is principally directed. In this period were painted the only two authentic likenesses of her hero that have come down to us—the La Tour pastel of 1753, of which one may see a replica in the Musée d'Art at Geneva, and the Ramsay oil painting made at Hume's instance in London in 1766, and now in the National Gallery at Edinburgh. In the interesting group of portraits and views gathered in these volumes we miss the La Tour, a smiling, affable face, surmounted by a peruke, a figure clothed in the upper fashion of the day, whom it is the author's mission to restore as essentially amiable and not misanthropic—least of all, the ingrate, the monster, the savage of the Philosophers who secretly blackened him while alive, and poisoned public and even scholarly opinion regarding him as soon as he was in his grave and before his dreaded "Confessions" appeared. Mrs. Macdonald is up to date with a photographic reproduction from Ramsay's canvas, which she takes over from the current *Annales* of the new Genevan Société J.-J. Rousseau, appending to it, however, Rousseau's opprobrious after-judgment of it as one more proof of Hume's false friendship and malignity. In it, to be sure, we no longer see the world-bright aspect of the famous premiated author of the "Discours sur les Sciences et les Arts," the musician who was delighting the Court with his "Devin du Village," but the outcast seeking on English soil a final refuge from Continental persecution, conscious of the conspiracy to hound and to silence him, over-suspicious, gloomy, clad in Armenian costume of cap and gown. One might fairly say that it is the battle between these two portraits (of which Ramsay's is undeniably the more fascinating) into which Mrs. Macdonald plunges with an ardor that may be thought needless in our time, and with a diligent pursuit of error and false-

hood worthy of all praise. Her method is to nail every lie, principal or subsidiary, as she proceeds; in her own words (II, 314): "The method of testing the truth of this libel is to state the facts, and to give the documents which establish the truth of the statement." The result is an extraordinarily rich assortment of first-hand evidence, most convenient to the use of the student, sometimes in translation, but abundantly in French, often in both languages; and at times Mrs. Macdonald (as if by an unconscious lapse) even connects in French of her own the passages she is transcribing from the original. Is it, for example, the question whether Rousseau committed suicide, by shooting? We have given us in French the official reports to the contrary at the time, of the autopsy (by his own desire), of the burial; the touching account of his last days and natural death by M. le Bègue de Presle; and, finally, the record of the opening in December, 1897, of Rousseau's coffin in the Panthéon (along with Voltaire's) which settled forever the falsity of the charge of suicide. And again: the *Annales* having furnished fresh documents from the *jongleur* Tronchin's papers regarding this "worse than foe, an alienated friend's" machinations against Rousseau, Mrs. Macdonald arranges for the first time in chronological order the letters between the celebrated physician and Rousseau leading up to the breach of friendship and of correspondence.

Mrs. Macdonald is entitled to all that she claims for herself in the way of research. If she sought vainly in the Paris libraries for a copy of A. A. Barbier's alleged analysis of Mme. d'Épinay's posthumous Memoirs prior to Brunet's doctoring of them for publication, she discovered in 1896 the Brunet MS. in the Bibliothèque Historique de la Ville de Paris (by which it was acquired at a sale as late as 1885), and was thus enabled to lay bare the whole history of the printed work which has so imposed its authority on the critics and biographers of the past century. To this discovery we owe the genesis of the present work, which might fairly have been designated "Rousseau and Mme. d'Épinay"; for wide as are the ripples in Mrs. Macdonald's pool, the Memoirs are the pebble from which they all circle out. She was led to scrutinize anew the original MS. (of which Brunet's was a fair copy), curiously divided between the Archives and the Arsenal Library, and styled in the former portion "Lettres de Mme. de Montbrillant." She was able to identify, besides the hand of the amanuensis, that of Mme. d'Épinay herself under duress, and that of Diderot, who by insertions, interlineations, marginal corrections, and especially by a series of curt notes directing alterations, which were slavishly complied with, achieved a deeper denigration of "René" (Rousseau) in the censor's own interest. The proofs of this tampering are afforded by facsimiles which leave no doubt on the subject, and by tracing to the Brunet MS. (proceeding from one of Grimm's secretaries) and the printed Memoirs the interpolations concocted as above. Old cahiers of what the Germans would call an *Ur*-manuscript survived in sufficient numbers to show the patchwork process.

Here was Mrs. Macdonald's touchstone, and she applies it mercilessly and con-

vincingly to Brunet's conscienceless product (which changed the work from its form of a romance to that of serious history, and supplied the real names). No one had done this before her, though MM. Perey and Maugras had the chance, and lost it through dulness or bias. She applies it to Diderot's "Tablet" exhibiting Rousseau's "seven rascalities," all of them embodied in the D'Épinay recension. She applies it with equal effectiveness to the story of the offer of the Hermitage—shown to be not a part of the author's first narration—and quotes copiously from the Memoirs in this critique. She applies it to the problem of the authorship of the anonymous letter apprising St.-Lambert of Rousseau's passion for his mistress, Mme. d'Houdetot (Mme. d'Épinay's cousin and sister-in-law); to the crimes against Grimm with which Rousseau was charged; to Diderot's pseudo-letter to the latter, which Grimm welcomed as a tidbit for his *Correspondance Littéraire*, and which, Mrs. Macdonald discovers, was rejected by the censor of Mme. d'Épinay's relation. She unmasks Grimm in his secret disfigurement of Rousseau in the *Correspondance*; among her minor discoveries being a list of paid subscribers, in Grimm's papers now in the Bibliothèque Nationale. In this section of the nobility is found Horace Walpole, author of the shameless forgery of a letter from Frederick II. to Rousseau which Hume (whether or no he had a hand in it) found a mere "pleasantry"—Frederick, whom Grimm carefully served with the *Correspondance*, and (we have his word for it) hoped to turn against Rousseau by his libels.

For Grimm and Diderot Mrs. Macdonald has no forgiveness, and she is right. Towards Voltaire she shows a leniency derivable from her general admiration for this coworker with the foregoing, though his abuse was more obscene than theirs, and his forgeries worse than Walpole's, and though he stooped to inform the Council of Geneva against Rousseau (and to deny the act), and was not unjustly denominated by his victim as "the chief of my persecutors." The appendix note with which Volume II. concludes is devoted to Voltaire, and is among the most interesting of all. In it is cited an argumentative *pastiche* of Rousseau upon Voltaire, as to his intolerance, fully equal in verisimilitude and mordancy to Voltaire's epigrammatic tirade against Rousseau's paradoxes and inconsistencies. Mrs. Macdonald's apology for Voltaire—virtually that he was under the deceitful influence of Grimm and Diderot—is substantially what she extends to Mme. d'Épinay, finding her never an enemy of Rousseau who sought to do him harm, and essentially a good woman, in spite of her sexual immorality, which was but the character of her time and society. With this view we have no disposition to quarrel: indeed, we may borrow an illustration of its justice from M. Philippe Godet's recent exhaustive and absorbing study of "Mme. de Charrière et ses Amis." This brilliant Dutchwoman (who sat to Latour for her portrait while Rousseau was sitting to Ramsay), when still unmarried, entertained a furious Platonic friendship and correspondence with Constance d'Hermences, uncle of her future lover, Benjamin Constant. D'Hermences, whose

galantries were perfectly well known to her, was ill-mated and chafing for divorce in the interest of new amours. The lady, nevertheless, was quite ready to marry him if he were free. On one occasion she had to reprove him for a piece of petty domestic cruelty. She could overlook, she said, his infidelities, as they were inherent in the frailty of human nature—"but it is so easy to refrain from beating your wife's dog." In truth, these infidelities spoke very little concerning the individual character of the man she was censuring, whereas the incident selected was a veritable index of it.

To return to Grimm & Co., their very language, faithfully reported here, set in comparison with Rousseau's meeting of their perfidious calumnies, should convince any one of his self-restraint and his peace-loving and forgiving disposition. Voltaire shows even worse by contrast to one who ever remained his admirer and contributed to his statue, and whose denunciations were moral judgments, never mere invective and outrage. Heartless, indeed, was the spirit that could write of the poor fugitive from state to state (II., 341): "Jean-Jacques, décrété à Paris et à Genève, convaincu qu'un corps ne peut être en deux lieux à la fois, s'enfuit dans un troisième." Let any reader of Mrs. Macdonald pass direct to the body of Rousseau's correspondence to satisfy himself regarding the loveliness of the born musician, the born lover of nature, the amateur botanist—to mention no other gentle traits.

There remains the vexed question of Rousseau's children sent to the foundling asylum, or "exposed" as Voltaire and his associates would have it. Mrs. Macdonald tries hard not to sophisticate in her judgment of the fact, supposing it to be true, or of Rousseau's vindication of his unnatural behavior. She has claims to research here, also, for she went through the carefully kept registers of the Enfants-Trouvés without finding any entry even in the case of the first child, which Rousseau had provided with a card of recognition. She found a Rousseau of right date, but not to be considered, and she is now inclined to settle down in the not unreasonable faith of Dr. J. Roussel (chap. ix. of John Grand-Carteret's "J.-J. Rousseau jugé par les Français d'aujourd'hui," 1890), that the congenital malady which was Rousseau's lifelong torment and led him to adopt the Armenian dress, was incompatible with procreation. Was he under an illusion regarding there having been any births? This seems incredible. Rousseau steadfastly maintained that he had not left his children in the streets, but assumed full responsibility for transferring them directly to the asylum through the medium of the midwife, and manifested a proper remorse for what he considered a humane deed under the circumstances. There remains another hypothesis suggested by an unsupported story (II., 308) of his having assured Moulou, by all that was sacred, that he had never had any children—meaning that the foundlings were bastards, even if before the world he accepted the rôle of putative father? The mystery will never be solved. A reviewer in the *Athenæum* cites Édouard Rod's revelation (in his "L'Affaire J.-J. Rousseau") of the discovery in the archives of the Enfants-Trouvés of a notarial act

in which, two years after Rousseau's death, or in 1780, the widow Thérèse abandoned her interest in the profits arising from the sale of the folio collection of Rousseau's musical compositions ("Les Consolations des Misères de ma Vie," Paris, 1781), for the eventual benefit of the Enfants-Trouvés. But had M. Rod examined the "Consolations" he would have observed that the profits were expressly designated for the Enfants-Trouvés, with no mention of Thérèse, who may nevertheless have been provided for, and who thus discounted before publication the benefits contemplated in her case. Had Mrs. Macdonald done likewise, she could hardly have failed to moralize on the list of patrons of a work to serve as a monument to a precursor and promoter *par excellence* of the impending Revolution. It begins with the Queen, followed by Madame, the Countess d'Artois, the Duchess de Chartres, the Duchess de Bourbon, the Princess de Lamballe (of dreadful memory); and can we believe our eyes when we find among the subscribing Paris nobility and gentry the mocking signature of "Grimm (M. le Baron de), Ministre Plénipotentiaire de Saxe-Gotha"?

It is no fault of Mrs. Macdonald's if Rousseau's prediction be not verified: "O! quand un jour le voile sera tiré, que la postérité m'aimera! qu'elle bénira ma mémoire!" We believe it will, and could wish that his admirer might have possessed greater literary skill, been less prolix and repetitious, less exasperating in her punctuation, more exacting of her printer in the French extracts, more endowed with typographic sense, though many will thank her for the bold body type, even when long quotations demanded a smaller. She has made some slips in reading her MS., some in translation. The most important source she appears to have neglected is François Meunier's "Madame de Warens et J.-J. Rousseau" (1902?), though she has taken "Maman's" portrait from it, perhaps. At page 125 of Volume I. she accepts Rousseau's account of "summer months spent at Les Charmettes, . . . where Rousseau had only the society of the adored Mme. de Warens and the companionship of his own thoughts and of nature." M. Meunier's researches tend to show that "Maman" made him a convenient exile in that Elysium, and that (p. 358) "l'idylle des Charmettes n'a jamais existé" except in Rousseau's imagination. But this has no relation to Mrs. Macdonald's main purpose. Her work is an honor to her head and heart, and as a repository is indispensable to every Rousseau library.

STUDIES IN HISTORY.

The Great Revolt of 1381. By Charles Oman. New York: Henry Frowde. \$2.90.

On the score of industry as disclosed by output, Professor Oman deserves to make a third with Major Hume and Andrew Lang. His remarkable powers of application are again illustrated by the present volume, which, though not long, represents much work among materials that cannot be handled rapidly. In former times a sketch of Wat Tyler's rising could be prepared with the help of chronicles alone; but now social and economic history cannot be studied in that way. Poll-tax rolls,

inquests, petitions, and records of trials are among the chief materials which the modern historian must use in writing of 1381, and these are not such quick reading as Froissart and Knighton.

In preparing his monograph, Professor Oman has had one great aid. The late André Réville, who wrote a luminous account of the troubles in Norfolk, Suffolk, and Hertfordshire, left numerous transcripts of documents which relate to the Peasants' Revolt in other parts of the country. Had he lived, it would have been unnecessary for any one else to take up the subject, but, like other men who have worked too hard at the *École des Chartes*, he was cut off just when he was on the point of establishing a fine reputation. His transcripts have passed into the hands of Professor Oman, who uses them freely but adds to them materials of value discovered by himself. Both Réville and Powell have dealt in detail with the East Anglian part of the movement, but for the other shires affected there was a gap which Mr. Oman now fills. And not only does he deal with the outbreaks as they affected every district from Somerset to Norfolk and from York to Kent, but he supplies excellent comment concerning the factors which entered into this famous and complicated disturbance.

The Peasants' Revolt had its more general causes in the dislocation of society by the Black Death and the stupid determination of the English Government to continue war with France after the victories of Du Guesclin. With the outbreak of violence Wyclif and Lollardy had nothing whatever to do. The masses were pinched by want, and when the Government insisted on taxing them for wars of ambition, the breaking point was reached. Prior to 1381 there had been numerous manorial revolts in almost every part of southern and eastern England, but two things were needed to render resistance universal. The first of these was an oppressive exaction like the poll-tax of 1381; the second was the resolve of the Government to punish those who evaded the tax. One of the most startling and convincing points in Mr. Oman's argument is that the writ of inquiry dated March 16, 1381, was the immediate cause of the great disturbance rather than any special organization on the part of the malcontents which led to concerted action. The tax was three times as heavy as that of 1377, and levied with less regard to the necessities of the very poor. As a result, fraudulent returns poured in from every shire—almost from every township. The merest novice at the exchequer could detect the deception, but the Government made a grave mistake when in the writ of inquiry it put out a threat of confiscation which, if executed, would have meant disaster to a majority of the population.

It is a prevalent idea, derived mainly from Froissart, that the Great Revolt was purely an insurrection of villeins. As a matter of fact many other classes joined in the disturbance, there being even in the rural districts a clear distinction between the insurgent villeins and the landless men who felt their wages to be tyrannically restricted by the Statute of Laborers. Manorial oppression doubtless was the largest grievance, but the spirit of anarchy once let loose attached itself to antagon-

isms of every kind. In towns like St. Albans, Dunstable, Bury St. Edmunds, and Lynn the citizens rose against their feudal superior. In towns like Winchester, Beverley, and Scarborough the masses turned upon the members of an encroaching oligarchy. In London the mob wiped out an old grudge against the foreign merchants by killing them and wrecking their premises. The most interesting if not the most valuable feature of Professor Oman's book is the diversity of material which it contains. The whole episode assumes new meaning under his skilful analysis of the causes which prompted such a widespread and spontaneous uprising.

This study adds weight to the strictures which have been made by Maitland and Cunningham upon a pet theory of Thorold Rogers. His view was that though the lords seemed to have got the upper hand, "the War of 1381 has as its effect the practical extinction of villeinage." Against this statement it can be urged that manorial records show the lords enforcing their rights with the utmost strictness in the generation which immediately follows the suppression of the revolt. The decline in villeinage is ascribable not to any special event, but to the voluntary relinquishment of demesne land to copyholders. The beginning of this process is observable in the reign of Edward III., and servile status has almost wholly disappeared before the death of Henry VI. But there is abundance of proof to show that Thorold Rogers was wrong in ascribing the eventual emancipation of the villeins to the events of 1381.

The incidents of the revolt are described by Professor Oman with considerable detail, but into this portion of the book we are unable to follow him. The study as a whole is compact, thoughtful, and learned. A useful selection of documents will be found in the appendix.

A History of Egypt from the Earliest Times to the Persian Conquest. - By James Henry Breasted. With 200 illustrations and maps. New York: Charles Scribner's Sons.

Ancient Records of Egypt. Historical documents from the earliest times to the Persian Conquest, collected, edited, and translated, with commentary, by James Henry Breasted. 4 volumes. I., The First to the Seventeenth Dynasties; II., The Eighteenth Dynasty; III., The Nineteenth Dynasty; IV., The Twentieth to the Twenty-sixth Dynasties. Chicago: University of Chicago Press.

Egypt Through the Stereoscope. A Journey through the Land of the Pharaohs, conducted by James Henry Breasted. New York: Underwood & Underwood.

It is a matter of congratulation that the best and most readable English history of Egypt has been written by an American. The histories of Brugsch and Birch have been superseded; the volumes of Wiedemann and Petrie, with their mass of detail, never were intended for continuous reading; they are books of reference, with exhaustive catalogues of the monuments and documents from which history is derived. Maspero's great work on the early civilizations is monumental, but it is far more inclusive than a mere history, and it is also marred by a dogmatic bias on the part of

the translator, which has rendered the work an object of uncertainty and suspicion.

In contrast with these books, we are now presented with a history which is a model in many respects. A welcome is due to it from those whose special interest centres in Egypt, from those who have the opportunity of spending a winter under the cloudless skies of the Nile-land, and also from those who are coming gradually to realize that the civilization of Europe owes Egypt a debt for material contributions at a formative period. For ages Egypt led in the march, and its line went out through all the earth. A readable history of Egypt makes its appeal also to those students of the Bible who wish to trace the mutual relations of the Israelites and Egyptians, a history which is written from a sympathetic point of view while being at the same time scientific.

Professor Breasted has made the attempt to present a modern history of Egypt. What this involves is not at once patent to the uninitiated. A first-class history must go back to the sources. But the study of the sources in this case means an examination of a multitude of inscriptions in the original, the copying and correcting of many hieroglyphic texts, and the translation and annotation of so many of these that they fill four volumes of "Ancient Records," each containing more than 350 octavo pages. The original texts were scattered through all the museums of Europe, or are still in their original places in Egypt itself, or in the Cairo Museum. The copies found in the older books are unreliable, having been made long before the recent advance in knowledge of Egyptian grammar. Egyptian epigraphy is inherently difficult, but doubly so when hindered by defective knowledge of the grammar and vocabulary.

The results of this vast labor are made readily available to the student in the four volumes of the "Records." These volumes are a sort of by-product of Professor Breasted's labors as agent in the field, for the collection and collation of material for the monumental dictionary of the Egyptian language now in process of preparation under the auspices of the German Emperor. The author says:

If these studies shall be considered to have made any contribution to modern knowledge in this field, it will be in the re-examination of the originals, the collection and focussing of all related materials with each document, and the assembly and translation of these materials complete in convenient form for reference.

How colossal a task this was, one can scarcely realize. Only one similar attempt to translate Egyptian documents had ever been made, viz., in the "Records of the Past" series. But in that series there was a lack of uniformity in rendering and treatment incident to a variety of translators and the absence of controlling editorship. Here we have a careful, uniform, and scientific rendering of all the known and accessible texts bearing on the history of Egypt. These volumes form a monument of the author-translator, which will give his name a permanent place in the literature of the subject.

The "History," based upon these documents, comprises about 600 octavo pages, and is illustrated by a multitude of appropriate and interesting cuts, half-tone, and other. It is not to be expected that the

volume shall be exhaustive of all the details. The method of presentation is that of the ready writer, in whose mind all the facts lie well ordered, only awaiting expression. The narrative moves rapidly, without hitch or break. In a word, the history is a model of its kind and a delight to read.

Professor Breasted has also entered another field in preparing the text of a volume intended to accompany a selected hundred stereoscopic pictures of the most noteworthy scenes and objects in Egypt. This series offers a vivid substitute for an actual trip up the Nile. The comment is that of the experienced observer.

The Story of Old Fort Johnson. By W. Max Reid. Illustrated by John Arthur Maney. New York: G. P. Putnam's Sons. \$3 net.

A few miles west of Amsterdam, in the Mohawk Valley, stands Old Fort Johnson, one of the most notable colonial mansions that have survived to our day. Here from 1742 until he changed his residence to Johnstown in 1763, was the home of Sir William Johnson, the most important, as he was the most interesting, figure in the colonial history of New York. The old house (it cannot properly be called a fort) came into the market last year in the settlement of an estate, and Gen. John Watts de Peyster purchased and patriotically gave it to the Montgomery County Historical Society. These circumstances appear to have been the immediate occasion for the publication of the present volume. Mr. Reid is a local antiquarian, already the author of an elaborate book, "The Mohawk Valley." He is well versed in early history, but he should have had the guidance of hands more accomplished than his own in the art of putting a book together properly.

Mr. Reid tells us in his preface that his title "indicates the character and purpose of this work." It does almost anything rather than that. Not more than one-quarter of the book relates in any direct way to Sir William's home. The remainder is a miscellaneous collection of romantic traditions and accepted facts, compiled from other histories with additional material collected at first hand by the author, but pertaining chiefly to other subjects than Fort Johnson. Among these are the battle of Lake George, the conspiracy of Pontiac, the interview between Gen. Herkimer and Joseph Brant, the siege of Fort Schuyler, affairs on the Susquehanna and Schoharie Rivers, etc. All of this is thrown together without chronology or any inter-relation and coördination of chapters. While many of the events were taking place, Fort Johnson, it is true, was standing, and for a part of the time Sir William was still alive; but that is all.

Moreover, in Mr. Reid's manuscript many verbal and other corrections should have been made. Sir William is called "the grand old man of frontier literary fame." As he died at fifty-nine, he was scarcely an old man, while his fame, great as it is and greater still as it should be, is in no sense literary. Fort Johnson is called "the first baronial mansion in New York." Erected as late as 1742, it hardly deserves this distinction; at least three of the Hudson valley manors had been half a century in existence when Fort Johnson was built,

and houses had certainly been erected on them. We are informed that in Pontiac's War Sir William and Joseph Brant were "leaders." Brant scarcely had that distinction, being then only twenty-one years of age. He had some part in the war, but it was wholly inconspicuous. Many similar errors might be cited. The index is inadequate. It is devoid of "catch words," lack of which makes page references useless.

Sigismondo Pandolfo Malatesta, Lord of Rimini. A study of a XV. Century Italian Despot. By Edward Hutton. With ten illustrations in photogravure. New York: E. P. Dutton & Co. \$4 net.

This is an excellent book, worthy to be read by every lover of good English, and unquestionably the finest piece of work Mr. Hutton has as yet done. It is, he tells us, "an experiment." He has set himself "to write fact as fiction," endeavoring "to give an impression of the first part of the fifteenth century without using a single incident which is not authenticated." His subject is Sigismondo Malatesta of Rimini, that strangest and yet most typical of Italian despots; and his mouthpiece is a certain Messer Pietro Sanseverino, a wholly imaginary person, but one, nevertheless, who tells the story of his patron's life as seriously as Monsieur Yriarte himself has done, and certainly with greater accuracy. There is here no such confusion between fact and fiction as we find in the so-called historical novel, and the visitor to Rimini and to the tomb and temple *Divae Isottae Ariminensi Sacrum* will find in these pages an amount of perfectly trustworthy information, which it is difficult to obtain elsewhere.

It is, however, the literary achievement which excites our greatest admiration. Sanseverino is no lay-figure. In a way—a subtle and deceptive way—he is the true hero of the book; we are at least as much interested in his character and idiosyncrasies as we are in those of the great personages whose exploits he relates; and when we read, in the epilogue (which purports to have been written by another hand), how he died, full of years and honors, yet, as the astrologer who cast his horoscope had prophesied that he would die, "hand in hand with youth," we almost feel as though we had lost a dear and intimate friend. Nor is this result obtained by illegitimate means. Mr. Hutton has been at infinite pains to create the right atmosphere and environment. Not only does Sanseverino live in the fifteenth century beneath Italian skies and among just such scenery as Flavio Biondo, Leon Battista Alberti, and Pope Pius II. have described for us, but he is himself also a product of that age; so much so, that it would be quite possible to know a good deal more than the average reader is likely to know about the Italian Renaissance without shattering the illusion. It is only when we deliberately force ourselves to be critical and begin to compare the work before us with the literature of the *quattrocento* that we perceive that the intellectual outlook of the writer, and, above all, his modes of expression, are those of our own day. Sanseverino says many beautiful things, and tells his story with a directness and simplicity worthy of all praise; but, regarded from

this, perhaps hypercritical, standpoint, he is, we are compelled to admit, after all, little better than a mask from behind which we hear the voice of his creator.

Thus, for example, the exquisitely beautiful description of Sigismondo's meeting with Isotta and of her influence over him would have been quite incomprehensible to a *quattrocentista*. Let the reader attempt to translate the passage in question (pages 82-84) into Italian of the *bel secolo della lingua*, and he will see why this is so. In like manner, the whole account of Sigismondo's childhood is hopelessly modern, both in feeling and treatment; while of anachronisms in method of expression we might quote innumerable instances. Suffice it to note that, on page 12, we are introduced to "Captain Gil Alvarez Carillo di Albornoz." What *quattrocentista* would have written that? From Matteo Villani to Ser Guerriero da Gubbio, in the chronicles of Perugia, of Rimini, of Orvieto, of Bologna, of Florence, Albornoz is spoken of as plain "Messer Gilio" or "Messer Egidio di Spagna, Cardinale." Indeed, almost as often as not, he is nameless, appearing simply as "a cardinal legate of the Pope," or as "one of those cardinals who crowned the Emperor."

But enough of criticism. The reviewer who can find nothing worse than this to complain of may indeed hold himself fortunate, and if Mr. Hutton's "experiment" is not entirely successful, that is due to the fact that success was practically impossible. Indeed, we sincerely doubt whether there exists in the world to-day a scholar so completely master of the English language, and, at the same time, so profoundly imbued with the spirit of the *quattrocento*, that he could do much better. The book as it stands is not only a useful contribution to Italian history, but also a prose poem of no small merit, finely cadenced, to be "rolled lovingly under the mental tongue," and read, not with captious criticisms, but, as its author would have us read it, "for delight." Our one serious ground of quarrel with Mr. Hutton is the absence of an index—an omission which seriously impairs the usefulness of the book.

Truth and Falschod in Religion. By William Ralph Inge. New York: E. P. Dutton & Co. \$1.50.

This book consists of six lectures delivered, at the invitation of a committee composed of resident graduates in the University of Cambridge, to an audience composed mainly of undergraduates; the author, now vicar of All Saints', Knightsbridge, was lately Fellow of King's College, Cambridge. The object of the lectures is to commend Christianity as a religious system to the attention of thoughtful young men, and this the author's method is well fitted to do. He candidly admits the difficulties of the subject, and recognizes the defects of much of the current Christianity and the value of modern scientific and philosophical thought. Religion, he holds, is not chiefly an affair of the intellect; the necessary postulate, or act of faith, is the belief that "our higher reason is in vital ontological communion with the power which lives and moves in all things, and most chiefly in the spirit of man" (p.

108). He lays no stress on miracles and prophecy, and he values dogma largely as the symbol of spiritual truth. What he emphasizes is the inner life. He deprecates the use of words like "atheism" and "infidelity" to describe the attitude of men like Huxley, Tyndall, and Haeckel. Such men, he thinks, are earnest preachers of a religion which they believe to be both true and precious; to Huxley science seemed to teach the great truth which is embodied in the Christian conception of entire surrender to the will of God. Further, Mr. Inge asserts that the bald hope of immortality, the brute instinct of self-preservation, has no necessary connection with religion; the real life is that which is linked with the whole order of God's thought and purpose, with the eternal existence and character of the man, and our consciousness of immortality consists in our consciousness and expression of this meaning (p. 168).

Mr. Inge thus puts religion in general and Christianity in particular on a high spiritual plane. But he is by no means ready to part with the supernatural. He will admit that belief in the Virgin Birth is not an essential feature of the Christian faith, has theologically no connection with the incarnation; but he says much of the "sacramental value" of this dogma and others. It cannot be said that he is clear on the subject of the supernatural; aware of the unsatisfactoriness of his presentation, he leaves the question with a plea for suspense of judgment (p. 117). On one point, however, he is decided and definite: he holds the doctrine of the divinity of Christ to be an essential element of Christian belief. The Logos doctrine of the Fourth Gospel and the Pauline conception of the mystical union of the believer with Christ he regards not only as Scriptural, but also as logically inevitable. The omission of this doctrine, he says, leaves Christ no place in his own gospel. It is doubtful whether his argument on this point (for he attempts an extra-Scriptural demonstration of his assertion) will satisfy the audience to which he addresses himself. But though we cannot regard his treatment of the Logos idea as convincing, we can heartily commend the spirit of his lectures, and there can be nothing but approval of his closing words: "If you cannot worship Jesus Christ, cannot you reverence and try to imitate Him? . . . Orthodoxy may wait; but the following in the footsteps of Christ must not be deferred."

The Modern Pulpit. By Lewis O. Brastow. New York: The Macmillan Co. \$1.50.

Despite notable instances of philosophic grasp and genuine human sympathy in the discussion of the principles and methods of preaching, the traditional treatise on homiletics is dull, commonplace, and permeated with a wearying littleness. There are traditions of giants in divinity school chairs of homiletical practice, but for several decades past, both abroad and in this country, lights that were distinctly lesser have shed glow on the preparation and delivery of sermons. Hebrew and New Testament Greek have been taught by men of parts; and students have been enthusiastic over expounders of the his-

tory and doctrines of the Church; while instruction in homiletics has too often been left to teachers of a different calibre. Professor Brastow's volume may be taken as the herald of a better day. Here is at least serious endeavor to correlate preaching with the philosophy and criticism, the spirit and life, of the time. The sermon is regarded, not as a little artistic construction in its own department, but as an integral part of the thought and effort of the age, amenable to the belief and aspirations current in the life to which it speaks. Professor Brastow sees clearly that there can be no understanding of the masters of pulpit oratory without thorough study of the tendencies and leading characteristics of the generation in which they lived.

In expounding, therefore, the Protestant preaching of modern times in Germany, Great Britain, and America, he submits the intellectual movements in those countries for the past two centuries to thoughtful examination, and endeavors to interpret the preaching of each country, and of the more prominent pulpit orators, in the light of the fundamental characteristics of the life to which the preaching was directed and of which it was a part. The result is most instructive and enlightening. The reader is made to see Newman, for example, not as a maker of an abstract thing called a sermon, but as the creator and advocate, through his pulpit work not less than his literary activity, of a great movement in current intellectual and religious life. Our own Beecher stands out, not as a genius apart in the art of public address, but at once the product and the moulder, of certain tendencies in American life.

It should not be understood that in this essay the distinctive personal qualities and merits of Liddon and Channing, Martineau and Brooks, are disregarded. The individual characteristics of each are fairly recorded, perhaps not in a manner to satisfy their partisans, but with sincere attempt at impartial historical judgment. The author has even had the temerity to include characterizations of a number of preachers who are still active, and, while his selection and appraisal show discernment, he is perhaps too near them to preserve the sense of proportion. The notable feature of this volume, however, is not its descriptions of personalities, but its examination of the more general agencies that have wrought upon modern preaching, together with its discrimination of the distinctive qualities in homiletical practice in the various Protestant nationalities and communions.

The Gate of Death. New York: G. P. Putnam's Sons. \$1.25 net.

There is no name upon the title-page of this book, but the advance notices of the publisher have given sufficiently clear hints as to its authorship; and its uniformity in appearance with "The Upton Letters" and "From a College Window" leaves no room for guesswork. The intimate nature of the work would certainly excuse a real anonymity, but it is a pity that the shallow pretence of it should be associated with a book of such dignity. One hardly knows where in the literature of English to turn

for an equally ingenious record of the experience of a human soul which has passed through the Valley of the Shadow, and returned to consciousness of its house of flesh. The writer has not attempted a philosophical interpretation of his data, but presents them for what they may be worth as a series of detached impressions: "nothing but the record of the sincere and faltering thoughts of one who was suddenly and unexpectedly confronted with death, and who, in the midst of a very ordinary and commonplace life, with no deep reserves of wisdom, faith, or tenderness, had just to interpret as he best could." In one respect, at least, Arthur Christopher Benson is over-modest; for such a record as his could have come only from one who possessed deep reserves of tenderness.

The disabling accident, rescue from death, and slow convalescence all occur at the country house of a married sister, and among those whom he holds most dear. After the return to consciousness, "the first emotion that came back to me was affection; I felt it mostly in the form of compassion for those who were evidently distressed at what seemed to me a thing of very little moment. I had a sense of gratitude for the care and tenderness that were centred on me; a certain sorrow that I should give so much trouble." And, again and again, in the weeks and months that follow, recurs the note of a sympathy almost over-exquisite: now for a robin dead in the snow; now for a child who suffers by the fault of nobody to no end; now for a sled-dog killed that its fellows may continue to live. This experience at the gate of death leaves to the man his man's mind, while it restores to him the heart of a child. All things interpret themselves to him in a new light—the light of love, human and divine.

But let no reader take up this record with the expectation of finding it a work of conventional piety or sentiment. In the course of his slow withdrawal from the dark gate, the diarist does not feel by precedent or speak by rote. He has many doubts as to the limits of faith, as to the meaning of human suffering, as to immortality—as to everything except the existence of a Divine Power, which in some mysterious way works for good. The result is a work not of didactic effect, but of singularly pure and elevated sentiment; of melancholy in the old sweet sense. Such a mood brings out all the richness in Mr. Benson's voice:

God rests, but ceases not. Through day and night alike beats the vast heart, pulsing in its secret cell. Through me, too, throbs that vital tide. What pain, what silence shall ever avail to bind that mighty impulse, or make animate whatever once has breathed and loved?

A Wanderer in London. By E. V. Lucas. New York: The Macmillan Co. \$1.75 net.

The description of London, old and new, is usually approached in too solemn a spirit. The task is so gigantic, the faces of London so varied, the historical incidents and associations so overwhelming in number and importance, that the enterprise is likely to sober the most intrepid. Besant's "London," for instance, designs to leave nothing untold—possibly a mistaken

ambition in a guide-book as well as in an epic. Mr. Lucas takes his London lightly, skims the cream, revives the reader with the most modern frivolous bits of information, and never oppresses him under a load of facts. After all, the London that one wants to know thoroughly is not so vast:

London is a country containing many towns, of which a little central area of theatres and music halls, restaurants and shops, historic buildings and hotels, is the capital; . . . the Embankment, Trafalgar Square and Piccadilly, Regent Street and the British Museum, the Strand and Ludgate Hill, the Bank and the Tower. That is London to the ordinary inquisitive traveller.

All that there is in those limits of ancient and modern interest Mr. Lucas describes in a style that is always entertaining, surprisingly like Andrew Lang's, full of unexpected suggestions and points of view, so that one who knows London well will hereafter look on it with changed eyes, and one who has only a bowing acquaintance will feel that he has suddenly become intimate. Many people, however, will think that the illustrations are the best part. Mr. Dawson's colored pictures idealize somewhat the murky gloom that the true Londoner professes to love, and all his illustrations are suffused with a yellow radiance beneath the fog and rain that are often suggested. Besides these there are numerous black-and-white reproductions of masterpieces of the public galleries, all excellent, and of pictures that are not often reproduced.

Though this is emphatically London up to date, London as she greets the American visitor rather than the London of Dr. Johnson, which some writers find more interesting, Mr. Lucas here and there makes concessions to the historical mania. One of these excursions into the past carried him to Edmonton and Ware on the track of John Gilpin, whose famous ride was supposed to take place about 1750. He discovered what one would have thought the reviewers of Cowper would have pointed out in their day, that the distance from Gilpin's house to Ware is twenty miles, so that we are to imagine that the Calender's hack galloped forty miles without stopping; that Mrs. Gilpin in her loaded chaise must have driven by the straight road to Edmonton while her husband went a long way round, for not only would he otherwise have overtaken her on his galloping horse, but the ballad tells us that he came to the Wash before he reached the Bell Inn, although the Wash is a mile farther from London than the Bell! But there is yet another difficulty. The horse, one remembers, was making for his own stable at Ware. When this happens a horse usually runs straight. But such was Gilpin's detour that when he passed the Bell and his wife, he was really galloping towards London again. Were this ballad an epic, these contradictions would be enough to prove that it was put together by more than one poet.

We have noted the following corrections: On page 205 for Ponte Vecchia, read Vecchio; on 226 for Apollo Musegates, read Musegetes; 227 for Astragali, read Astragali. There is one surprising omission. The only map is dated 1560, and is now of merely antiquarian interest. A good modern map is needed.

Four Centuries of the Panama Canal. By Willis Fletcher Johnson. With six colored maps and sixteen illustrations. New York: Henry Holt & Co. \$3 net.

This is the most thorough and comprehensive work that has yet appeared on the Panama Canal; and it is especially interesting because, as its title indicates, it opens to view the long perspective of the great enterprise. Four hundred and four years ago this month Columbus sailed into Limon Bay, the Atlantic entrance to the canal, trying, as we are trying now, to find a way to get his ships through to Asia. For a hundred years and more thereafter navigators of all lands strove to discover "the secret of the Strait," and pushed their boats up every river, bay, and inlet from Magellan's Strait to the Hudson River. Balboa was the first to cross the American barrier by the shortest way, a little east of the present Isthmian route. It was "stout Cortez" who first ventured to suggest that if no strait could be found one could be made.

Mr. Johnson devotes a hundred solidly-written pages to the history of Panama from its discovery to the failure of the French. Then follow the American assumption of the task; the fight between the Nicaragua and Panama routes; the sharp bargaining with the French company; the still sharper bargaining with Colombia; the bloodless revolution (one Chinaman killed, but Chinamen do not count on the Isthmus); the swift recognition of the independence of the Republic of Panama; and the Taft visit, which the author narrates from personal observation. Mr. Johnson also tells how we asked advice from foreign engineers and rejected it; how we killed off the mosquitoes and thereby extinguished yellow fever; and how we hurried and worried through that terrible first year—all with fuller detail than in any other single work on the subject. Mr. Johnson has been diligent in the collection of material, much of which is hard to find; but he does not give us a single foot-note reference to the source or authority for his statements, some of them novel and surprising enough to invite further investigation. But he has quoted generously from original State papers; and by adding a good index and eleven appendices containing the text of such documents as the Clayton-Bulwer Treaty, the Hay-Pauncefote Treaty, the Spooner Bill, and the Panaman Declaration of Independence, he has given us a valuable reference book.

Fortunately, he has confined himself mainly to the bare narration of events, and the copying of official records; for where he writes with a freer hand he uses the pen of a partisan, or at least an advocate, rather than that of an historian. He writes about Panama as though he were a real estate agent seeking investors, but even a real estate agent would avoid such sweeping and unqualified statements as this about rubber culture:

You may plant a hundred trees on an acre, at a cost of only thirty dollars, and in a few years each tree will be yielding two to ten pounds of rubber a year, worth nearly a dollar a pound.

As a matter of fact, the most that can be said about rubber raising in Panama is that it is promising, but problematical. The same can be said of coffee, and as for indigo, which he recommends, its cultivation is

being abandoned everywhere because the artificial product is cheaper and better. The streets of the city of Panama, in his opinion, compare favorably with those of Boston and New York in straightness, lightness, breadth, and cleanliness. The keynote of the book is given in its first pages by the dedication to Secretary Taft, for whom the author has unbounded admiration. Mr. Johnson's views throughout are those of the Administration, and he rarely ventures an independent judgment of disputed questions. The critics of Isthmian affairs are indiscriminately denounced in the chapter headed "stultiloquentia," wherein, as he says, he puts the carrion in the pillory. He skates over thin ice in the most graceful manner. For example, from the slight reference on page 337 to the making and cancellation of the Markel contract for catering to the employees no one would suspect that if it had not been for a prompt and vigorous protest the men would have had to pay for their board, according to Chief Engineer Stevens, a million dollars a year more than it should cost them.

The discussion of the engineering side of the question is very inadequate. Although he mentions the adoption by Congress of the plan for a lock canal at the 85-foot level, he devotes all his attention to the other and rejected schemes, and does not include a map of it. The great dam at Gatun, which is the crucial point of the plan now being followed, is twice referred to, but only to say that it is impracticable. That statement may be true, but so ardent a champion of the powers that be should at least have mentioned some of the reasons that made Secretary Taft and President Roosevelt think it is practicable. Yet it is ungrateful to criticise Mr. Johnson for what he did not say when he has crowded so much information in his 450 pages. For a work of such detail, covering a new field, it is—except when the author gets enthusiastic and eloquent—remarkably free from errors.

The Spirit of the Orient. By George William Knox. New York: T. Y. Crowell & Co. \$1.50 net.

Amid the shoals of publications which pretend to appraise Asiatics, it is exhilarating to meet the work of a scholar who has made it his first aim to gain the right perspective, and then, by self-examination and sympathy, to utter truth concerning these people of other continents and inheritances. Dr. George William Knox lived long in Japan, studying especially the minds of the Japanese, as revealed in their literature, language, history, and present ambitions and attainments. After this he journeyed through China and India. Probably no other American has made so thorough a study of Confucianism, both in its Chinese development and, particularly, in its Japanese adaptations. Perhaps none has made such a qualitative analysis of Buddhism, especially that enormous modification of the faith, so called, under which Japan has been trained by action and reaction.

In the study of religion, Dr. Knox, knowing human nature well, puts difference between the height of religion as held by men capable of abstraction, who ponder upon the "changeless, timeless, limitless, indescribable, Ultimate and Absolute," and by the

average man, he to whom the struggle for existence as well as wife, children, parents, and self are very real things. Furthermore, the writer knows, as Burke has told us, that it is impossible to bring an indictment against a whole people. He therefore insists—and this seems to be the underlying thesis throughout his work—that fair judgment of Japanese, Chinese, Hindus, and other human beings on the great continent is to be made only by taking them as individuals. He will not have them all tarred with the same brush, but will know them only as good and bad, mean and noble, spiritual and gross.

Hence the charm of his book. It is one of the keenest in analysis, perhaps, of any book written on the Far East. He knocks to flinders the nonsense for which, among the unlearned, and we may add perhaps stupid, Kipling is responsible, that the Oriental and the Occidental are eternally separated. He notes how the British regiments in India come to church and chapel with their guns loaded, for the British conquerors take no risks. Yet Dr. Knox believes that there are ideals and a faith higher than any at present known in vision or attainment, and that it is possible to make of the nations of the earth one new man. Though he does not say it in so many words, he believes that we Westerners are to be as much influenced in every way by the Easterners as we are to influence them, and that our own religion, art, literature, customs, and theory of the universe are yet to suffer immense change. In other words, inquiring what gift the spirit of the East has to bestow upon the West, he answers, in effect: "We are already its debtors, but it has more to give, and we stand in need of the lesson which Asia can teach us." In the East the organism is supreme; in the West the individual. Although the spirit of the East has finished its course in Asia, it will introduce among us new elements into life and thought, while we shall teach the East the value of personality. In action and reaction shall be the powers of the world to come on this planet. He says: "Conquer the East by arms we cannot; we must depend upon truth, in science, in religion, and in commerce. Compel obedience we cannot; win agreement we must by the force of sympathy."

Dr. Knox's chapters show in detail the American and the Asiatic points of view, with concrete illustration. Then follow chapters on his experiences, or perhaps we should say his thoughts based on movement of body and mind in the three typical countries. His pages, so far from being heavy, are brightened with anecdotes and very modern instances. His concluding chapter, entitled, "The New World," was written since Japan showed her real spirit in collision with Russia. He believes that the Japanese are not likely to go to war again. As liberty is essential to progress, Japan made mighty sacrifices to secure liberty and truth, and her success has powerfully influenced India and China for good. He makes masterly answers to some of the foolish fears born of ignorance concerning peaceful China and progressive Japan. As in the Occident man has become at once scientific and free, enabling him to conquer both nature and himself, so the vision of this prophet takes in its ken a new East, with its stream of tendency unaltered, per-

haps, but informed with the same potencies. This is a book for the wise, and not for the vulgar. It is well-illustrated, but without an index.

Applied Sociology: A Treatise on the Conscious Improvement of Society by Society. By Lester F. Ward. Boston: Ginn & Co. \$2.50.

As its title implies, this work is a companion or complementary volume to the author's "Pure Sociology," which was published three or four years ago. Both works are but the further development of the social philosophy outlined in earlier treatises, of which the first, "Dynamic Sociology," appeared in 1883. Readers of the current literature of sociology are so familiar with the doctrines associated with the name of Mr. Ward, that it will suffice in this place to call attention to the specific contribution which this latest volume makes to the author's sociological system.

Mr. Ward's "Pure Sociology" presented his analysis of society as it is; and his most important conclusion was that, while social structure develops slowly and is hard to modify, nevertheless few if any social institutions are incapable of modification. The one thing requisite is the discovery of appropriate means of accomplishing desired changes, and scientific study shows that these are usually, or even invariably, of an indirect character. "Applied Sociology" treats of the methods of accomplishing desirable modifications in social structure and organization. From the pure science of society it learns the history and true nature of the institutions which are to be changed, and then it aims to discover the best means of working their gradual transformation. It is, therefore, a scientific theory of progress.

Part I. of "Applied Sociology" treats of movement; Part II. of achievement, and Part III. of improvement. That intelligently directed effort can produce desirable social movement was Mr. Ward's principal contention in his "Dynamic Sociology," and in this part of the present volume he travels tolerably familiar ground. Under the head of achievement, he considers the conditions favorable to progress; and rejecting the "exceptional-man" theory, argues that the equalization of opportunity, which means the equalization of intelligence, is the chief desideratum. His discussion of improvement, therefore, is mainly a discussion of the diffusion and practical utilization of knowledge, upon which social amelioration chiefly depends. Here again he adds little to the doctrines of his previous works, but reinforces the argument with pertinent illustrations drawn from a variety of sources, chiefly the anthropological and sociological literature of the last two decades.

In assessing the value of it all, much depends upon one's attitude toward what passes current as the science of sociology. While exhibiting some of the characteristic defects of its class, Mr. Ward's work is always marked by vigorous thinking and seldom fails to prove interesting and suggestive. As a treatise upon social reform the present volume could be perused with profit by many an ardent reformer inno-

cent of all acquaintance with sociological speculation. Mr. Ward's views upon scientific legislation do not have the suggestion of impossibility, the air of unreality, with which they probably impressed the average American reader when first presented in 1883. And his remarks about the true method of social reform will bear reproduction:

With the idea of reform has always thus far been associated that of heat rather than light. Reforms are supposed to emanate from the red end of the social spectrum and to be the product of its thermic and not of its luminous rays.

Whatever may come of the effort to produce a single comprehensive science of society, there will always, we opine, be room for sane discussion, like the present volume, of the conditions and agencies of social progress.

Drama.

MODERN BOOK PLAYS.

One of the most characteristic as well as one of the most pernicious features of the present dramatic era is the prevalence of the book play, a theatrical phenomenon due partly to the enormous increase in the output and consumption of sensational fiction, but still more largely, in all probability, to the system of profuse advertisement practised by many publishers of the modern novel. That any written legend or tale, containing strong dramatic elements, should in time find its way to the footlights is, of course, only the fulfilment of its natural destiny. Everybody knows that Shakspeare and other great Elizabethans, Molière and other moderns, never hesitated to appropriate the convenient plots of earlier or contemporary writers. But they used these only as a framework for their own dramatic structures, filling up the bare outlines with the riches of their own invention and imagination, vitalizing crude puppets by the infusion of divine fire, and thus transforming raw farce or melodrama into the high comedy or lofty tragedy of universal life. To-day the process is entirely different. The story selected for dramatization—and too frequently it is chosen on account of some moral or physical deformity, some aberration from what is sane or normal—is stripped, so to speak, to its bare bones and, robbed of whatever literary or other decorative attraction it may happen to have, is exposed in its unlovely nakedness for the gratification of depraved, stupid, or morbid tastes.

These remarks refer primarily to the "dramatization"—an essential but practically unavoidable misnomer—of the ephemeral novels of the last twenty years or so, though they might have a wider application. Plays founded upon books have been more or less common for nearly a century, but it is only recently that they have been coming in a flood. Many of them have been successful in a commercial sense, but speaking broadly, none of them has had any lasting value or artistic merit, except as regards the individual performance of some particular player. Probably not one would be included in any category of representative dramatic works. The innumerable pieces based upon the fiction of Sir Walter Scott, Dickens, Reade, Marryat,

Lytton, Alnsworth, and the rest are forgotten by all save the oldest playgoers. A few of the characters are associated with the memories of once popular performers; that is all. As literature and drama the plays themselves had little or no significance, though many of them afforded good and wholesome entertainment.

So much cannot truthfully be said of the great majority of the modern book-plays, which are seldom healthful or legitimately amusing. But the object of this article is not so much to consider their moral effect as the evil influence which they exert upon the theatre itself. They offer to managers a means of escape from their higher responsibilities; they encourage the breed of hack scribblers and mere theatrical tinkers, and destroy the field of the professional dramatist. In former times the manager of a first-class theatre in search of fresh attractions had to depend, to a considerable extent, upon his own judgment in the choice of the plays submitted to him by rival playwrights, and was a fairly capable judge of their literary or dramatic quality. The system of long runs had not then been organized, and he was frequently in the market for new pieces. Authors, well established in public repute, found it worth their while to write them, although the remuneration was much smaller than it is now. But the average manager of the present is neither inclined nor competent to deal with original stage matter. He must have something on which the stamp of public success has already been put. Hence, the active demand for translations of successful foreign plays or adaptations of novels whose titles, if not on everybody's lips, are at least to be found in large type, with the usual trade certificates, in the newspapers and magazines. It is in this way that the prevailing methods of literary advertisement have reacted upon the policy of the stage. Commercial managers were prompt to discern the advantage to a play of a title which had been kept for weeks or months before the public eye at a cost of tens of thousands of dollars paid by somebody else. They foresaw that a large proportion of the persons who had read or heard of the book would be attracted to the theatre by motives of mere curiosity. Thus was created the demand for the book-play, and the industry has been growing, like a rank weed, ever since. The managers found it profitable for various reasons. In the first place, the risk of absolute failure was greatly decreased by the fact that the play, whether well or badly made, or brilliantly or indifferently acted, was assured of a certain amount of patronage; and, secondly, the work of a professional adapter was less costly than that of an original author.

The managerial policy of clinging to adaptations or translations has necessarily been a great discouragement to such competent dramatists as might, under other conditions, have been willing to write for the stage. As for the smaller men, willing to do hack work, they naturally have not been averse to having their plots found for them, but few of them have manifested either the instinct or the skill necessary to actual dramatization. As a rule their sole aim has been to reproduce whatever was most strange, unnatural, extravagant, or startling in the original story, without ref-

erence to the qualifying or explanatory conditions of the written page, which might create the semblance of veracity or plausibility. No small part of the discredit among sensible men and women into which the theatre has fallen of late must be attributed to these uncouth bits of patchwork, which often are as unjust to the original creator as they are offensive to common intelligence. They are among the most flagrant products of the commercialism which now dominates the theatre, and the most dangerous symptoms of a progressive decadence.

Inasmuch as it is clearly impossible to compress a book into a play—there is no reference here to the use of some salient phase of a story for theatrical purposes, which is another affair altogether—without discarding most of its literary quality, it is plain that its true character is not necessarily indicated in any stage version. Thus it comes to pass that genius often lies at the mercy of audacious mediocrity. The most recent example of this is to be found in the cruel parody of Victor Hugo's wonderful work, "Les Misérables," recently produced in the Manhattan Theatre. In this case an actor of very ordinary calibre has converted a masterpiece into clumsy and tawdry melodrama, in order to provide himself with a prominent part and catch the crowd with cheap claptrap. The task which he attempted was, of course, impossible, but that does not alter the case, so far as Hugo or the stage is concerned. It is pleasant to note that a good many book plays have failed badly during the last few months, and that the most notable successes of the season have been won by pieces conceived and written for the stage and the stage only.

"THE DOUBLE LIFE."

"The Double Life," by Rinebart Roberts, presented in the Bijou Theatre on Monday evening, is a play founded upon a novel, though not entirely new, dramatic theme, which contains an interesting story and is animated by a definite purpose—three excellent qualifications. But unfortunately the play is much less skilful in construction than it is ingenious in conception. Its chief importance, perhaps, lies in the fact that it permits Henri de Vries to strengthen the high estimate of his abilities based upon "A Case of Arson." In that clever little sketch he availed himself liberally of the arts of theatrical disguise; in this instance he scarcely uses them at all, exhibiting his versatility in the depiction of character in a much more delicate and subtle way. The play purports to be a psychological study, but the problem involved is one of pure physiology. A young man, refined, prosperous, and eager, on the eve of his wedding starts on a long journey and is shot by outlaws in a desolate region. He recovers from the wound, but his memory is a perfect blank. He becomes a mine boss, in the course of the next twenty-five years, marries, and is a pattern husband and father. Then a sudden shock—the discovery, as he thinks, of his idolized daughter's shame—restores the recollection of his earlier, while destroying that of his intermediate, existence. His wife and child are strangers to him and his present condition a frightful puzzle. He is like a man

in a waking nightmare. Ignoring for the moment all questions of probability or pathology it is plain that these different phases of a single life demand, for a successful portrayal, great powers of intuition, discrimination, and interpretation. The actor has to assume the buoyancy and energy of cultivated youth; the rough virility of a shrewd but ignorant miner, and the chaotic distress of one suddenly awakening from a long trance to find himself robbed of the best part of his life and left in a state of pitiable isolation. Mr. de Vries played all these parts, if not with absolute success, at least with extraordinary comprehension, infinite variety of minute and appropriate detail, and with wonderful naturalness, maintaining the external identity, and marking the intellectual and social differences with veracity and assured skill, although hampered by a strange tongue which he still speaks with difficulty. To the connoisseur of highly finished acting, his performance was a continuous pleasure. The way in which he suited pose, gesture, voice, and manner to conditions, the appropriateness of every look, tone, and movement, the perfect control of facial expression, the complete absence of exaggeration or any mere straining after effect, marked the trained artificer and the born player. Better acting in domestic drama could not reasonably be asked for.

The latest book of Prof. Gregor Sarrazin, "Aus Shakespeares Meisterwerkstatt" (Berlin: Georg Reimer), exhibits the same qualities that have distinguished his previous work, namely, learning, ingenuity, and copiousness of ideas, but we fear we must add a radically unsound judgment. What are we to think of a critic who cites a couple of allusions to snow and ice in the "Two Gentlemen of Verona" as a proof that that play was written in the winter? We believe, however, that the palm for fantastic criticism will have to be awarded to Prof. Sarrazin's identification of the characters in the "Henry IV." plays with various contemporaries of Shakspeare. According to this scheme, which the author proposes with an enthusiasm commensurate with its ingenuity, Falstaff is George Peele, Pistol is Marston, and Prince Hal is the Earl of Southampton. The book, indeed, is a perfect mine of wild suggestion. Nevertheless, the author has mastered the critical literature relating to the plays with which he deals, viz., those of Shakspeare's earlier periods down to "Hamlet" (inclusive), and he discusses these plays from practically every point of view except that of characterization, so that the reader who is duly endowed with the spirit of skepticism may extract from the volume a great deal of interest and something of profit.

The Early English Drama Society is prepared to publish a second series of seventy plays belonging to the Bacon-Shaksperian period.

An Ibsen association has been organized by the admirers of the great dramatist in the Rhenish province of Prussia, the purpose of which is to study his writings and to reproduce them on the stage. Beginning with the new year regular *Mitteilungen* are to be published, and in Düsseldorf Ibsen plays will be given.

Otho Stuart seems to have abandoned his

notion of making the London Adelphi Theatre the home of the higher drama. "A Midsummer Night's Dream" will soon give way to Hall Caine's "The Bondsman" and "The Prodigal Son."

Music.

English Music. Lectures given at the Music Loan Exhibition. Imported by Charles Scribner's Sons, New York. \$1.25 net.

Tchaikovsky. By Edwin Evans. New York: E. P. Dutton & Co. \$1.25.

One of the most interesting illustrations of the theory of evolution and the survival of the fittest may be found in art museums that have collections of old and obsolete forms of musical instruments. Many of these are as grotesque as the alleged simian ancestors or relatives of man, and apparently about as musical. Two years ago an exceptionally varied collection of what may be called ancestral instruments was put on exhibition by the Worshipful Company of Musicians, which is one of the ancient guilds of the City of London, with a history tracing back to the times of the minstrels. A special feature of the exhibition was a series of seventeen lectures, covering nearly every side of vocal and instrumental art, and designed to explain the development of music and musical instruments during the last three centuries. These lectures seemed altogether too valuable to serve a merely temporary purpose, and they have therefore been printed in a volume, together with 115 illustrations, depicting some of the most interesting of the exhibits—manuscripts, autograph scores, and portraits, as well as instruments.

To the student of English music this book is indispensable. The writers who have contributed to it, and all but five of whom are members of the Musicians' Company, are T. L. Southgate, W. H. Cummings, Henry Watson, E. Markham Lee, J. Finn, Frederick Bridge, Algernon S. Rose, A. H. D. Prendergast, F. J. Sawyer, G. F. Huntley, D. J. Blaikley, F. W. Galpin, W. W. Cobbett, J. E. Borland, A. H. Littleton, and Ernest Clarke. The year 1604 is taken as the starting point, and Sir Frederick Bridge cites Erasmus, who wrote in that year that England had the most handsome women, kept the best tables, and was most cultivated in music of all people in the world—not a mean compliment, inasmuch as there were on the Continent at that time such noted musicians as Peri, composer of the first opera; Carissini, "whose works were so very useful to our dear old Handel when he was pressed for time," and Monteverdi, who asked his orchestral players to do such difficult things that they went on a strike. Mr. Southgate gives an exceptionally clear account of the evolution of the pianoforte from the dulcimer of the ancient Assyrians, and the mediæval clavicord and harpsichord. He explains the origin of the name *pianoforte*, and expresses the opinion that some of the shapely and fanciful English music of the seventeenth century is still worth hearing. Believing that the great charm of the pianoforte is its evanescent tone, he does not think it is desirable to foster devices for giving it greater sustaining power—a point on which most musicians will disagree with

him. Dr. Cummings discourses on old English songs, Dr. Watson on early English viols. A specifically English branch is discussed by Dr. Lee, in a lecture on madrigals, rounds, catches, glee, and part-songs. There are chapters on instruments of the flute family, on dances of bygone days, masques and early operas, ancient and modern organs, brass-wind instruments, early printed music, English opera after Purcell down to Sullivan and Stanford, etc., making up together an exceptionally valuable contribution to musical literature.

Books on Tchaikovsky are multiplying. It is easy to write them now since Mrs. Newmarch has issued her admirable translation of the elaborate and exhaustive life and letters of the great Russian composer by his brother Modest, published by the John Lane Co. Mr. Evans's monograph is, of course, based on that, yet not so exclusively as to make one question its *raison d'être*. Inasmuch as Tchaikovsky is known in England—everywhere, in fact, except in Russia—chiefly by his instrumental works, especial attention is paid to these, although the songs and the operas are not overlooked. The author refers to the fact that Tchaikovsky's operas are at times aggressively national, but this does not explain why they are neglected outside of Russia. It is their national coloring that gives his orchestral works one of their chief charms. At the same time, it is odd that two other popular and esteemed orchestral writers of his time—Dvorák and Saint-Saëns—have composed a number of operas which, popular at home, have not been acclimated in other countries. A valuable feature of Mr. Evans's book is a chronological table of Tchaikovsky's compositions. One wonders at the author's peculiar logic which led him to give elaborate analyses of the first four (and comparatively inferior) symphonies and then dispose of the immortal fifth and sixth in a few paragraphs because they are played so often and "every concert-goer necessarily has a programme containing the fullest analytical notes." Did he write this volume for Londoners only?

Both of the rival opera houses gave performances last week of Verdi's "Aïda." At the Metropolitan Mr. Conried had the incomparable Caruso in the rôle of Radames, while at the Manhattan Mr. Hammerstein brought forward Mr. Bassi, a tenor new to local audiences, but one endowed with a splendid voice which thrills like a trumpet in the high notes. Chorus and ensemble were much the better at the Manhattan, thanks to the really wonderful musicianship of Cleofonte Campanini, who has demonstrated to astonished audiences that the orchestral conductor really plays almost as important a rôle in a Verdi opera as in a Wagner music drama. Another notable event at the Manhattan was the first appearance as Escamillo in "Carmen" of M. Renaud, who is not only a fine singer but an actor of the first rank—the equal, in his line, of Campanini. Mme. Melba will reappear at this house next week. At the Metropolitan the next revival is to be Delibes's "Lakmé," to-morrow night, with Mmc. Sembrich as the heroine.

Of recent concerts two call for attention. The Russian Symphony Orchestra brought forward one of the most gifted of the

younger Moscow composers and pianists, Alexander Scriabine. He played his own concerto and some short pieces, proving himself a player of good technique and correct musical instincts. As a composer he suggests the influence of Chopin rather than of the nationalists of his country. He will be heard in a special recital of his compositions at Mendelssohn Hall on January 3. He is, like another pianist now giving concerts in this country—Lhévinne—a pupil of Safonoff. This "high-pressure conductor" (an enemy called him that and he accepted it as a great compliment) made a sensation at the last Philharmonic concert by an interpretation of Wagner's "Tannhäuser" overture which stirred even the staid and dignified afternoon audience to almost unprecedented demonstrations of delight. The climax at the end, where Wagner engulfs the worldly element in a mighty vortex of sacred sound (the Pilgrims' Chorus), was overwhelming. The effect was due partly to his bringing out the inner melody in this outburst of brass—an effect first secured by Nikisch and promptly adopted by Seidl and other great Wagnerian leaders.

It is definitely announced that Madame Nordica will not sing in opera here this season. Her only New York appearance is at Carnegie Hall, January 8, with the assistance of the New York Philharmonic Society. She will also be heard at the Twenty-third Regiment Armory, Brooklyn, December 29, with the assistance of Fagnani, the baritone; Dethier, violinist; Charles Anthony, the Boston pianist; the Twenty-third Regiment Band, and a large chorus. The "Inflammatus" from Rossini's "Stabat Mater" will be given.

Reginald de Kovens's romantic opera, "The Student King," with Miss Lina Abarbanell in the principal part, will be sung for the first time in this city on Christmas night at the Garden Theatre.

Art.

THE WINTER ACADEMY.

There is an especial interest in the exhibition of the National Academy of Design now open at No. 215 West Fifty-seventh Street, in that it is the first exhibition held by that body since its union with the Society of American Artists, and the consequent changes in its constitution and in its methods of selection. Certainly the change has infused new vitality into the Academy, and it was the almost universal opinion of artists and laymen at the Varnishing Day and the Opening Reception that this is the best exhibition held by the Academy in many years. There is an air of life and vigor and freshness about it that is rare anywhere in the world, and the level of technical achievement is remarkably high. It is an exhibition to which one might take an intelligent foreigner with the assurance that it not unfairly represents the promise of the American school of painting, and the foreigner would probably admire it more than we do, and find in it evidences of spontaneity and a national point of view that escape our accustomed eyes. Yet it is an exhibition held at an unfavorable season, when the year's work

of the artists is yet uncompleted—an exhibition from which an unusual number of our best men are, for one or another reason, absent. No change in organization or machinery can bring together work that does not exist, and there are no revelations of unfamiliar talent; but either because the new methods have resulted in better selection and more intelligent display of work submitted, or because these methods have inspired a confidence that has resulted in the submission of better work, there can be no doubt that the artists present are seen pretty nearly at their best. A good deal of the effect is certainly due to the intelligent efforts of the Hanging Committee, which has performed its task to admiration.

That an American school of painting, with characteristics of its own, is disengaging and affirming itself, there can no longer be any doubt. The imitation of this or that foreign school or master is less and less apparent and technical fads and movements are of decreasing importance. The work shown is not only eminently vigorous, but is eminently sane. The excesses of Impressionism, for instance, are already of the past. Almost the only work in the exhibition which shows the Impressionist influence in a noticeable degree is that of Childé Hassam, and Mr. Hassam has profoundly modified the Impressionist method, has bent it to new ends and to the expression of a new personality, so that his production is essentially original as it is essentially artistic. There is nothing in him of Monet's temper of scientific demonstration—it is beauty he is after, a new beauty revealed in a new way—not a theory of light. His "Little June Idylle" is delicious, alive with the shimmer of sunlight and the tremble of leaves, as modern as Monet, yet as poetic, as classic, as Corot. The tradition of Whistler and Monet is visible in the work of Robert Henri and of a few others, but here again the tradition has been modified, and Mr. Henri, in particular, has an unmistakable personality of his own, rude at times, but vigorous and capable on occasion of subtlety, as in the "Girl in the Fur Cape." The methods of the modern Dutch school are reflected here and there, and other evidences indicate that our painters are still willing to take lessons where they can find them; but the most notable pictures are of native inspiration, and can be attached to no foreign school. Take, as examples, Winslow Homer's "Gulf Stream" and George De Forest Brush's "Mother and Child"—both, one is happy to say, the property of public museums; Mr. Brush's picture being lent by the Corcoran Gallery, while the Metropolitan Museum has done itself honor in accepting the suggestion of the Academy Jury and purchasing Mr. Homer's, the first American picture to be bought by the Wolf fund. "The Gulf Stream" is, in spite of evident crudities, a masterpiece of extraordinary power; perhaps the greatest work of our most original painter. The "Mother and Child" is one of the richest and most sober productions of a master of elevated style. Neither of them could conceivably have been produced in any other country than this or by any other than its author.

There are still sketches and studies and notes to be found in this as in all our exhibitions, but they are no longer, even

numerically, in the ascendant. Everywhere there are evidences that our artists are ready to produce real pictures, conceived, designed, and composed; that the qualities of thoroughness of design and power of color which mark the two great canvases just mentioned are to be the characteristics of the American school of the future. As instances, in figure and landscape painting, take two of the newer comers to our exhibitions, men of only a few years' standing, but already Associates of the Academy, Hugo Ballin and Paul Dougherty. Mr. Ballin's "Sibylla Europa" is not altogether the best picture he has painted, but it shows clearly his preoccupation with decorative beauty, with balance of mass and flow of line, with fulness and variety of color. Mr. Dougherty's picture, "Land and Sea," is, on the other hand, the strongest thing he has yet shown. There is a surge and rush and weight to his waves that is exhilarating, as is the quality of fresh and independent observation of nature; but there is present also a grandeur of design and a deep-chorded harmony of color which is the result of conscious art. If there is a thought too much insistence upon yellow as the dominant note, it is almost the only fault in what is a work not of promise but of achievement.

There are scores of pictures in the exhibition that it would be a pleasure to praise, but I am trying rather to note tendencies and to find general significance than to award credit for individual performance. There is little sculpture shown, the most important of that little being the small animal groups of F. G. R. Roth. This paucity of interesting works of sculpture in our exhibitions is one of the most regrettable results of that lack of adequate gallery space which is the greatest problem before the Academy. Let it be understood that the desire for greater exhibitions does not mean a desire to exhibit work of inferior quality now refused. It means a desire to exhibit together and at once the work of high quality now exhibited at different times and places or not exhibited at all. Here is an exhibition of unusually high quality which quite fills the available wall space of the only public galleries we have, yet it is quite certain that an exhibition as good or better, as large or larger, will fill these same rooms three months from now. Add to these two exhibitions that which is annually held by the Ten American Painters, and the numerous private exhibitions held at this or that dealer's gallery, and you have, in oil paintings alone, an annual output of acceptable work, which no jury would think of refusing, sufficient to thrice fill the Fine Arts Galleries. Add to this again the watercolor exhibitions, the exhibition of the Architectural League, the work in sculpture and in black and white which is rarely exhibited at all, and you would have something which might be called an American Salon—a great exhibition which should really represent American art and would end by attracting foreign artists also. When are we to have it? The artists, in composing their differences and in forming one organization which really represents American painting and sculpture and will in time include the best architects and original engravers also, have done their part. They are not business men, and it is not to be wished that they should stop producing works of art and give their time

to providing facilities for showing them. This is the work of the state, the city, the public, and the patrons. There is little hope that the state or the city will perform it. Will not the enlightened patrons of art take it up? KENYON COX.

The winter exhibition of the National Academy of Design opened to the public on Saturday. There are 355 paintings and sixteen pieces of sculpture. Of the pictures only about 150 are by members. The Carnegie prize of \$500 has been awarded the "Misty Night," by Ben Foster, a low-toned landscape that takes in a wide range of river and hills. The Proctor prize has been awarded to a portrait of a child, "Dorothy B.," by William T. Smedley. The exhibition will remain open through January 19.

Versailles and the Trianons. By Pierre de Nolhac. New York: Dodd, Mead & Co. \$3.50 net.

The director of the Versailles museum writes with affection on a subject which one would hardly have supposed likely to arouse much enthusiasm. He realizes that it has been the practice for almost a hundred years to speak of the symmetry of the Versailles palace as unnatural and of the stateliness of its park as passing beyond elegance into monotony and stiffness; and without attempting to revive a dead taste he manages to persuade us of the advantages, to students of history and of art, of possessing so complete a type of qualities which, after all, made a great epoch. He regards the grounds, buildings, and interior decorations of the old residence town as forming a total effect which may be termed Versailles art, and of this he remarks:

It is now recognized that the building, as a whole, as well as the details that adorn it, show all the merits of balance, proportion, and dignity. It is of course allowable to prefer other qualities to these; it may be thought that they tend to hold creative imagination in check; but it is a fact that they represent the essential characteristics of French art.

M. de Nolhac indicates, in a large and poetic description, how much artistic stimulus the place contains and will increasingly disengage as "the art of Versailles" recedes into a softened perspective.

The illustrations, by René Binet, were evidently intended to heighten whatever of glamour and mystery lurks in the formal avenues of Versailles, and as the place is not really a congenial abode of this shy nymph, and the pictures are excessively vague in outline and audacious in coloring, the result is far from truthful. It is a pity that no credit is given to the painstaking and able translator.

An exhibition of oil paintings and watercolors by Jonas Lie is open at the New Gallery, No. 15 West Thirtieth Street, till January 5. Many of these pictures, fruit of a visit to Norway, Mr. Lie's birthplace, give proof that he is fulfilling the extraordinary promise of his earlier work. Mr. Lie is an artist of unusual force and individuality, who expresses a striking and somewhat sombre feeling for nature in terms of actual and keenly noted appearances. He has not yet, we hope, equipped himself with all the technical assurance of which he is capable. There are still traces in this work of handling which is

not expressive, of brush strokes which suggest no conformation in the scene, of paint that suggests the color of itself rather than of anything else. But where he succeeds he succeeds with something very like genius. His composition shows that he has the eye to see his subject detached from the confusion of insignificant detail, and to present it as a singularly vivid and unified impression. His vigorous treatment of detail, on the other hand, shows that the breadth of his arrangements is obtained by no over-simplification.

Collections of Dutch and French pictures are on view at Oehme's Galleries and Tooth's, in this city. At Oehme's there are, among other paintings, work by Israels, Blommers, J. H. van Mastenbroek, Evariste Pieters, Mauve, Weissenbruch, Theophile De Bock, Harpignies, Dupré, Diaz, Daubigny, Corot, Henner, Roybet, and Ziem; at Tooth's, by Jacob Maris, Weissenbruch, De Bock, Thaulow, Joseph Bail, Ziem, Harpignies, and Gérôme.

The modern Germain paintings which are to be exhibited at the Albright Gallery in Buffalo will include works by Franz von Stuck, Heinrich Zugel, Hans von Bartels, Gotthard Kuehl, Thoma, Bracht, Truebner, Leistikow, Schonleber, Herrmann, Lepsius, Von Kardorff, Skabina, Adolf von Menzel, Wilhelm Leibl, Max Koner, and Franz von Lenbach.

The annual convention of the American Institute of Architects is to be held at Washington on January 7, 8, and 9. The custom of presenting a gold medal of honor will be begun. The recipient next month will be Sir Aston Webb, the English architect.

The works of the Society of Western Artists, now on view in the Art Institute, Chicago, will be taken to St. Louis, Indianapolis, and Cincinnati at the close of the present exhibition.

The annual exhibition of the Royal Hibernian Academy will open on February 4, a month earlier than usual.

The Munich artists of the "Secession" hold a winter meeting from December 28 to February 3.

The various art purchases and "commandes" of the French Government for 1906 are now on exhibition at the Paris École des Beaux-Arts. There are in all 381 numbers—pictures in oils, water-color, and other drawings, engravings, and sculpture. The sculpture includes three works by Rodin—his "Belloué," and busts of Berthelot and Falguière.

A bequest of twenty-seven pictures by Italian masters has recently been made to the National Gallery, England, by Miss Lucy Cohen. The collection includes examples by Sandro Botticelli, Lorenzo Costa, Pietro Pallajuolo, Bronzino, Francesco Zuccarelli, Bernardino Luini, Alessandro Bonvicino, better known as "Il Morretto", Giovanni Battista Moroni, Antonella da Messina, Girolamo Romanino, Paris Bordone, Francesco Guardi, Giovanni Tiepolo, Jacopo Marieschi, Enrico Fiammingo, Annibale Carracci, Benedetto Gennari, Salvatore Rosa, and Bonifazio Veronese.

At Christie's auction rooms in London on December 8, the following pictures were sold: J. C. Cazin, Stacks and Sheaves, £430; J. Israels, Study, £126; J. L. E. Meis-

sonier, Charles I. on Horseback, £378; F. Roybet, The Cavalier in Green, £262.

On Friday and Saturday of this week C. F. Libble & Co. of Boston offer at auction some mezzotints, etchings, and engravings from two private collections. Among the mezzotints are flower and fruit pieces by Earldom after Van Huysum; portraits by Valentine Green, Joshua Reynolds, Hald, Houston, and Watson; and Savage's own portfolio of proof mezzotints, including the rare full-length portrait of Washington, 1801, the Washington Family, Thomas Jefferson, Eruption of Mt. Etna, Landing of Columbus, also an unfinished pencil drawing. Among the line engravings are proofs by Edward Mandel, Bartolozzi, Toschi, Mercuri, Van Dyck, and Caroline Watson; there are copper plates by Dürer, Rembrandt, Holler, and Lucan van Leyden. The Washington portraits include the pair of mezzotints of George and Lady Washington by Charles Wilson Peale, the mezzotint by Hamlin, and the Doolittle portrait. There are also many pictures for extra illustrating.

Science.

The Bird; Its Form and Function. By C. William Beebe. New York: Henry Holt & Co. \$3.50 net.

It is no small compliment to Mr. Beebe's book to say that among American works it invites comparison only with Part II. (General Ornithology, pp. 59-221) of the late Dr. Coues's classic "Key to North American Birds." This section of the "Key," however, has been published separately only in England, and the present volume is, therefore, the first in this country to be devoted wholly to a study of the relations existing between a bird's structure and its habits. The author emphasizes the difference between the physical and the mental life of the bird, and here restricts himself to a consideration of the former. "Ancestors," "Feathers," "Framework of the Bird," "Organs of Nutrition," "Muscles and Nerves," "Senses," "Beaks and Bills," "Heads and Necks," "Wings," "Feet and Legs," and "Tails," are among the chapter headings.

The book appears opportunely. Bird collecting, until recently the chief, if not only, outlet of ornithological endeavor, is now commonly discouraged, unless it be pursued with a definite object. Biographical studies which will add to our existing information of the habits of the more readily observed birds, require continuity of effort possible to but few; but an investigator with limited opportunity for field work may take up one of the many problems presented by the external or internal anatomy of birds and with a small number of dead or living specimens make acceptable contributions to the science of ornithology. Feathers, their structure, growth and molt, the nature of their pigmentation, the influence on their color of controlled conditions of food, temperature, or moisture; the skeletal, muscular, visceral, and psychical system of the bird; the bird in the egg and the earlier stages of its physical and mental development—all these offer an inviting field not alone to the professional, but to

the amateur with no time for out-door studies.

In promoting work of this kind, Mr. Beebe's book should exert a wide influence. While, of necessity, it is in part a compilation, it contains much original matter. As curator of birds in the New York Zoological Park he has had an opportunity to study intimately many species of birds under what are, for a zoological garden, exceptionally favorable conditions. Thus, with the assurance born of personal observation he can state well-known facts as well as present the results of important experiments. The discovery, for example, that the subjection of a bird to moisture-laden air through only two molts will materially change the color of its plumage, has a wide bearing on the general subject of the relation between color and climate.

So many of the 370 odd illustrations were made by the author from living birds, either in nature or in captivity, that they constitute an actual addition to our sources of information. While, from the nature of the case, they do not all reach the standard of technical excellence set by the best, they are far more effective and convincing than drawings of the same subjects.

Mr. Beebe's style is in itself pictorial; but in clothing his facts with "living interest," as he says in his preface, he occasionally passes the boundary line between warrantable deduction and pure fancy, as in the attempt to explain the diversity of habit among warblers (pp. 362-366). In the main, however, he holds the rein more tightly, and accomplishes his expressed intent to capture the attention of the layman while winning the approval of the professional. Considering the wide field covered, actual errors are infrequent. We note the following: The autumn molt of the male scarlet tanager gives him not the entire, but only the body plumage of the female, the wings and tail being black as in the spring; the wearing away of the brown edges of the snow-bunting's feathers is not postponed until "the spring in their Northern home," but begins in the autumn; the bobolink does not become black and buff by a loss of the brown tips of the autumnal "female dress," but the bird undergoes a complete molt in the spring, in which the black feathers, at first yellow-fringed, are acquired; the adult sooty tern has no "transverse lines of white across the back" to "totally destroy the symmetry of form."

The book is carefully printed, and there are but few typographical slips. The use, however, of extremely heavy, highly glazed, clay-coated paper adds unnecessarily to the weight of the volume, and detracts from the ease with which it is read.

We cannot close this review without congratulating the New York Zoological Society on the possession of a curator who is more than a keeper of animals. Zoological gardens are so frequently considered as merely collections of animals to be looked at through bars or in paddocks, that it is a satisfaction to learn of one in which original research is encouraged.

In the "Immediate Care of the Injured" (W. B. Saunders Company), Dr. A. S. Morrow hopes to be useful to physicians, nurses, and the laity, but he fails to preserve a just balance of the requirements of these

classes of readers. About a third of the book is given to a description of the parts of the body and their functions. This is perhaps as well done as the space permits, but the beginner will hardly realize that a large part of the liver is gone from fig. 31 unless he compare it very carefully with a previous picture. In the matter of accidents and other emergencies the advice is for the most part good, and is clarified by numerous illustrations of the pathology as well as the methods of treatment. The ordinary "emerger" or "first aider," already tempted to do almost too much, will hardly learn the use of the hypodermic syringe from the text and figure (p. 161), and if she apply the blanket according to the picture (p. 210), she will probably smother the patient as well as the fire. The section on the transportation of the injured is excellent.

Two Arctic explorers now in the far North have the same object in view. They are A. H. Harrison, an Englishman, and Eric Mikkelsen, a Dane. Both are seeking to discover, by sledging from Banks Land, west or northwest, whether there is land in the unknown seas to the north of the western part of the American continent. According to a report received by the Royal Geographical Society, Harrison reached Banks Land last July, but was forced to abandon his plan to spend this winter there because the captains of the whaling ships he met could not give him the provisions he asked. He is, therefore, again wintering at the mouth of the Mackenzie, and will not be able to undertake his exploring trip to the west until February, 1908. Meanwhile, Mr. Harrison has made some valuable observations of the polar drift. He concludes that there is a northeasterly current from Point Barrow, which, meeting north of Herschel Island the waters of the Mackenzie, is turned in a west-north-west direction corresponding to the drift of the Jeanette and the Fram. Mikkelsen, who has his own ship, the *Duchess of Bedford*, has reported from Point Barrow under date of August 18, complaining bitterly of the abnormal summer, which brought nothing but winds and currents straight from the North, with extraordinarily heavy coast ice. His scientific companion, Detlevsen, he lost because of sickness. Naturally, Mikkelsen despaired of reaching Banks Land this year.

At the American Museum of Natural History in this city the busts of prominent scientists, presented to the museum by Morris K. Jesup will be unveiled on Saturday afternoon. J. Pierpont Morgan, vice-president of the museum, will preside at the exercises. Dr. Hermon C. Bumpus, the director, will make the presentation on behalf of Mr. Jesup. Joseph H. Choate will accept the gift; and brief memorial addresses on the work of the scientists will be made as follows: Dr. S. Weir Mitchell of Philadelphia on Benjamin Franklin; Baron Speck von Sternburg on Alexander von Humboldt (read by Count Hatzfeldt); Dr. C. Hart Merriam on James Audubon; Dr. Nathaniel L. Britton on John Torrey; Dr. Robert S. Woodward on Joseph Henry; the Rev. Edward Everett Hale on Prof. Louis Agassiz; Dr. Arthur Twinning Hadley on James Dwight Dana; Dr. Hugh M. Smith on Spencer Fullerton Baird; Dr. William Keith Brooks of Johns

Hopkins University on Joseph Ledy; and Dr. Henry Fairfield Osborn on Edward Drinker Cope.

The next International Agricultural Congress has been called to meet in Vienna, May 21 to 25. It is the eighth convention of the kind, the first having been held in Paris in connection with the exposition of 1889.

An international exhibition of scientific and technical journals is to be held in May of the coming year in Copenhagen under the auspices of the Danish Society for Technical Journalism.

The death is announced of Ernst Pfitzer, for thirty years professor of botany at Heidelberg. Among his works are "Belträge zur Kenntnis der Hautgewebe," "Grundzüge einer vergleichenden Morphologie der Orchideen," "Über die Geschwindigkeit der Wasserbewegung in der Pflanze," and "Verfahren zur Konservierung von Blüten und zarten Pflanzen."

Finance.

END-OF-THE-YEAR MARKETS.

People who watch Wall Street, without the benefit of personal experience in its vicissitudes, must have been impressed this season by the constant prediction that, whatever happened before the last weeks of December, financial markets would then have a dangerous bridge to cross. With this prediction, moreover, was always coupled the further assurance that, the "turn of the year" once made, there need be no further cause for disquiet. In Wall Street vernacular, "December stringency" would normally be followed by "January ease."

This double phenomenon has become so familiar to financial markets that people seldom stop to ask the reason for it; yet the question is worth considering. Why should the money market, and with it the market for securities, be subject to violent disturbance in the last days of a year, and promptly emerge from trouble as the new year opens? The calendar year is not in reality the financial year; that may be said to begin in the spring, when new crops have been planted and the fundamental influence in the industrial fortunes of a dozen nations can for the first time be measured. In December, the conditions underlying a year's prosperity or adversity are familiar to every one, and in January, nothing more can be known than in December. Yet of the general truth of the financial tradition regarding these two months, there is no doubt whatever.

To take only a few typical instances: It was at the end of December, 1893, when markets had for three months been recovering from the midsummer panic, that the strain on corporation credit reached the breaking point, and two great railways went into bankruptcy. In 1899, the "Boer war panic" had passed away before November; yet it was just before the opening of December that the Bank of England rate went up to 6 per cent.; and it was in the last days of December that Wall Street witnessed a Stock Exchange panic and a 186 per cent. rate for money. There had been trouble in Wall

Street in October, 1902; it had blown over; but in the latter part of December, disturbance again became so grave that the banks had to announce publicly that if necessary, they would advance \$50,000,000 to avert a panic. The last days of December, 1905, were marked by the famous 125 per cent. call money rate.

Nevertheless, each of these incidents was followed by a tranquil January. The year 1894 opened with easy money and a surplus bank reserve rising to the largest recorded figures; money rates promptly fell to 4 per cent., and the bank surplus rose to \$29,000,000. Almost exactly the same result was witnessed in January, 1900, in January, 1903, and in January, 1906. This is the basis for such confidence as exists that the violently unsettled markets of last week and this week, with their repeated collapse on the Stock Exchange, their 8 and 10 per cent. rates for time loans, their charge of 10 to 14 per cent. for advance of money on American stocks at London, will lead to a calm and untroubled market when we get into 1907.

What is the explanation of this abnormal strain at the end of a calendar year, so suddenly relaxed? The first and most obvious cause is the so-called "coupon payments" of January 1. It is estimated that on or about that date there are paid to holders of American corporation stocks or bonds, in dividends or interest, not less than \$150,000,000. This capital, it is true, is in the market before the day of payment as well as after; but it is present in a different way. Banks or trust companies, holding this enormous sum in the last weeks of December, can indeed lend it out; but they can lend it only temporarily. By December 31, they must have it back again. The borrower who relies on loans thus conditioned may presently find his position most precarious. Theoretically, all this \$150,000,000 might be recalled at one moment from outstanding loans—which, in a highly speculative market, might mean disaster. As a matter of fact, part of it is not loaned out at all in the last week of the year, and efforts are made to replace what is recalled, about the 31st, by money procured from banks of other cities where the "coupon disbursements" are not so important a factor. But even these mitigating arrangements mean tightening money rates and reduction in the normal supply of capital. Once this huge fund is, however, distributed to its proper beneficiaries, it flows back unconditioned to the depository institutions, where it is loaned out again in the routine way. Hence, the quick relief of January.

Much the same state of things occurs at the other "semi-annual coupon day," July 1. But a summer market is something different from the market around the close of the year. At the end of June the crops have not been harvested; trade is dull throughout the interior of the country, and New York has little difficulty in borrowing all it needs from inland banks. The January payments fall at a time when harvests are all in, when the farm communities and the cities which supply their needs are doing the heaviest business of the year, when every one, from the Atlantic to the Pacific, is spending money and drawing on his bank deposit to get the money to spend. Wholly apart from the needs of speculative Wall Street, therefore, demand for

capital is at high notch for the year.

Added to this, and by no means a negligible influence, is a process for which the London market has invented the name of "window-dressing." This means that certain financial institutions, which have to report their sworn condition to the Government on December 31, call in their loans before that date to reduce their liabilities in the statement, and sometimes draw out in cash their balances in some larger institution, to add to their own reserve. This pressure, too, is bound to relax automatically after January 1.

The question of the present moment is, how far rule and precedent are to be relied on in looking for financial comfort next month. A rather manifest decrease in the confidence of predictions to that effect has been witnessed during the past few weeks, and for this, apparently, the cause has been

the heaping-up of obligations which, though their settlement has been deferred until next month, must be positively settled then. We have heavy repayments of this sort to make a few weeks hence to Europe; others must be made to the Treasury. Along with this has arisen some doubt as to whether interior banks, which usually send back currency to New York when their local trade grows lighter after the year is over, will be able next year to spare such reserves as early and as abundantly as usual. Probably these misgivings apply with more force to later weeks or months than to January, when at least some tangible relief is sure to come. What doubters have in mind is the fact that, throughout 1906, each successive spell of returning ease was speedily cut short by a renewed financial strain, growing in severity as the months went by.

BOOKS OF THE WEEK.

Bardeen, C. W. *The Cloak-Room Thief*. Syracuse: C. W. Bardeen.
 Cambridge Church Records, 1632-1830. Boston: Eben Putnam. \$6.

The Investments of Life Insurance Companies

By LESTER W. ZARFMAN, Instructor in Insurance, Yale. \$1.25 net; by mail \$1.37.

An analysis of the investments and the earning power of each class of assets belonging to the life insurance companies. The interest rate has been calculated by an exact method, which has hitherto never been used, making this study of insurance investments of value to all who are concerned in the rate of return upon loanable capital.

Also a discussion of the relation of the investments to social welfare, taking up particularly the important problem of securing a proper control of the immense assets which the companies are accumulating.

 HENRY HOLT & CO. NEW YORK

Thomas à Kempis
 His Age and His Book
 By J. E. G. de Montmorency
With 22 full page illustrations.
 8vo. Net \$2.25.

A study of movements and events that resulted in the school of thought and the mood of mind which à Kempis represented.

"Contains a vast fund of detailed information. Historical, literary, and critical points are handled throughout in a scholarly manner."—*N. Y. Tribune.*
